

CANNABIS OIL

Cannabis Information Institute

How to Make Cannabis Oil

- In a large glass bowl or measuring jug, add decarboxylated cannabis and oil
- Fill the crockpot with enough water to reach the halfway point of your large glass bowl or measuring jug
- Place crockpot/slow cooker on medium-low heat and wait until the water has heated
- Now, place the bowl of cannabis and oil into the water within the crockpot/slow cooker
- You can cover this infusion, although it is not necessary.
- Ensure the water does not get too low during the infusion process, some will evaporate
- Leave in the crockpot/slow cooker for 3-4 hours, stirring every hour or so
- Line a hand strainer with cheesecloth (3-4 pieces on top of one another) and strain cannabis oil back into its original container or a mason jar
- Store in the refrigerator and enjoy responsibly

INGREDIENTS

15 GRAMS DECARBED CANNABIS

2 CUPS OF OIL (500ML) - OLIVE OIL, COCONUT OIL, AVOCADO OIL ETC

EQUIPMENT

LARGE GLASS BOWL OR LARGE PYREX-STYLE MEASURING JUG

CROCKPOT/SLOW COOKER

HAND STRAINER

CHEESECLOTH

CONTAINER FOR THE FINAL PRODUCT (MASON JAR WORKS WELL)
