

# Medications for H. Pylori Infection

4 medications:

- **Metronidazole 500 MG (3 times a day)**
- **Doxycycline 100 MG (2 times a day)**
- **Pantoprazole 40 MG (once a day)**
- **Pepto Bismol 262 MG (3 times a day)**

Note: Sometimes pharmacies won't dispense Pepto Bismol. If they won't dispense it, you will need to buy it over the counter

Every day for 14 days:

<b>Time</b>	<b>Medication</b>
<b>Morning</b>	Metronidazole (1 pill) Doxycycline (1 pill) Pantoprazole (1 pill) Pepto Bismol (1 pill)
<b>Mid-day</b>	Metronidazole (1 pill) Pepto Bismol (1 pill)
<b>Night</b>	Metronidazole (1 pill) Doxycycline (1 pill) Pepto Bismol (1 pill)

Note: It is very important you follow the schedule above and take the medication for the full 2 weeks in order to treat the infection. Abdominal pain can be a side effect of antibiotics - try taking the medications with food.
