

WE'VE MAPPED THE WORLD. NOW LET'S MAP HUMAN HEALTH.

What is "healthy" anyway?

Health is most often defined in terms of illness. If you are not sick, by default, you must be healthy. You don't need a PhD to know that correlation isn't always true.

That is why scientists across the NC Research Campus, including those with the Duke Clinical and Translational Science Institute (CTSI), are working to understand and develop a true definition of human health. As an enrollment site for the Project Baseline study, Duke CTSI Translational Population Health Research Group, or "TransPop," in Kannapolis applies their clinical research expertise to the challenge of defining "human health."

Learn more about how the Project Baseline study is
"mapping" human health.

Visit the Project Baseline website to learn more.

John French and Ashley Dunham, the first two people enrolled in the Project Baseline study by Duke, share their thoughts about helping to make history as they contribute to a well-defined “baseline” of human health. John enrolled at Duke CTSI’s TransPop office at the NC Research Campus, and Ashley enrolled at Duke’s main campus in Durham.

Meet John and Ashley.

JOIN US

Walk with a Doc

Saturday, August 4.

Registration 8:45 am. Walk 9 am.

Free and open to Duke MURDOCK Study participants and the public. Walk at your own pace and get your questions about heart health answered by local physicians. Co-hosted by Duke and Sanger Heart & Vascular Institute, meet at the Neal Davis Gazebo, Les Myers Community Park, 130 Lawndale Ave. SE, Concord.

Duke Dash

Saturday, October 13, 9 am to noon.

Register online.

Join us for the 5th annual Duke Dash 5K & Healthfest at the NC Research Campus! The 5K run begins at 9 am. Enjoy a morning of fun and healthy activities like line dancing, Zumba, yoga, and face painting from 9 am to noon in front of the Core Laboratory Building, 150 Research Campus Drive, Kannapolis. Rain or shine.
