

TIEBACK SEAL RECEPTACLE

The Tier 1 Tieback Seal Receptacle is commonly installed in conjunction with a liner hanger or liner top packer.

The Tieback Seal Receptacle is designed to match the requirements of an associated Locator Seal Assembly. Together they provide the ability to extend the liner top up-hole while maintaining the pressure integrity and pass-through ID of the liner.

Reasons for extending the liner include: isolating damaged casing, repairing a leaking liner top, and isolating the intermediate casing from pressure or production.

Length, wall thickness, and material must be based on the initial installation, the associated liner string, and all future potential applications.

CURRENT SIZES

⇒ All sizes available

STANDARD OFFERING

⇒ L-80 / P-110

OPTIONS

⇒ CRA materials

⇒ Length for additional seal surface

⇒ OD and ID

FEATURES & BENEFITS

- ⇒ Low angle top bevel for ease of entry with production or service equipment
- ⇒ Customized based on application to provide maximum versatility

APPLICATIONS

- ⇒ Cemented / Non-cemented liners
- ⇒ Production
- ⇒ Injection
- ⇒ Thermal / Non-thermal
- ⇒ Vertical / Deviated / Horizontal
