LIFT OPERATION INSTRUCTIONS

Thank you for choosing LTW!

Are you ready for something great? Read on and learn how to raise your level of ergonomics with LTW products!

OPERATION

RAISING: Press the “up” arrow button and hold until desired height. Make sure nothing interferes with the motion, as the lift system has power to damage items in its path.

LOWERING: Press the “down” arrow button and hold until desired height. Make sure nothing interferes with the motion.

PROGRAMING PRESETS

1. Raise or lower to the desired height using the previous steps.
2. Press the "S" button once and release.
3. Press the numerical button you would like to associate with that height (ex. 1, 2, or 3) and release. This programs the button to its set position.
4. Repeat this procedure to program the other numerical buttons.

USING PRESETS

1. First, make sure nothing will interfere with the motion, as the lift system has power to damage items in its path.
2. Press and hold your chosen numerical button until motion stops at its programmed height.
3. Work ergonomically and happily!
