Superior Quality You Can Trust at a Price You'll Appreciate

Providing Nine Electrolytes for Maximum Endurance, Stamina, and Performance

Why provide your athletes with an electrolyte product that only meets half of their electrolyte needs when it matters the most?!

- Until now, most electrolyte-replacement supplements have not offered a truly balanced electrolyte replacement product. Athletes don't just spend one (sodium) or two (sodium and potassium) electrolytes during intense, grueling activity. The fact is they also lose other critical electrolytes too—like magnesium—essential for energy conversion (magnesium-dependent ATP) and muscle function.
- **elete tablytes™** are setting a new standard in the electrolyte-replacement category, providing 9 electrolytes essential for hydration, optimal fluid balance, energy conversion, endurance, proper muscle function, and post-recovery in a form that's quickly absorbed.
- **elete tablytes™** are a convenient way to ensure a more complete balance with nutritionally significant amounts of essential electrolytes to help replace heavy fluid and electrolytes losses.

Utilize Balanced Electrolyte Replacement to Prevent Muscle Cramps

- **elete tablytes™** are ideal for athletes working in grueling, high-heat conditions or suffering from muscle cramps due to dehydration or overexertion. Muscles rely on a balance of electrolytes rather than just sodium and potassium.
- **elete tablytes™** provide a complete balance of electrolytes lost in sweat and replenish the electrolytes that play a key role in muscle function.

Fast Results to Maximize Peak Performance

- When every second counts, who can wait for an electrolyte-replacement product to begin working? Our electrolytes are in true electrolyte form—water-soluble—and capable of generating and conducting energy rapidly.* **elete tablytes™** begin working immediately.
- **elete tablytes™** are a dietary supplement intended to be taken as a tablet. **elete tablytes™** are designed to provide concentrated doses (and a complete balance) of crucial electrolytes. **elete tablytes™** don't contain sugars or starches, so they're easily digestible and won't upset your stomach or cramp your performance when it matters most. **elete tablytes™** don't contain caffeine, stimulants, hormones, or questionable substances. Numerous athletes have used **elete tablytes™** safely and effectively.

How to Use tablytes™

Suggested Use: Swallow one tablyte™ with 8 oz. of fluid—preferably water—before or after activity. tablytes™ are balanced electrolyte tablets—not a beverage add-in. Always re-seal the bottle lid tightly after each use.

Supplement Facts

Serving size 1 Tablet Servings per container 120		
Amount per serving	% Daily Value*	
Calcium (Tri-Calcium Phosphate, Calcium Carbonate & Calcium Citrate)	40mg	4%
Phosphorus (Tri-Calcium Phosphate)	10mg	1%
Magnesium (elete Electrolyte Add-In™)	30mg	8%
Chloride (elete, Sea Salt)	350mg	10%
Sodium (elete, Sea Salt)	150mg	6%
Potassium (elete)	95mg	3%
elete (liquid equivalent)	1/3 tsp (1.7mL)	†
Sulfate (elete)	15mg	†

† Daily Value (DV) not established.

Ingredients: *elete Electrolyte Add-In™ (sea mineral concentrates and potassium chloride), powdered cellulose, microcrystalline cellulose, calcium blend (tri-calcium phosphate, calcium carbonate, calcium citrate), sea salt, modified cellulose blend, modified cellulose gum, vegetable magnesium stearate, vegetable stearic acid. Coating contains Ethylcellulose, Triacetin, Di-Acetylated Monoglyceride (contains Soy), Marogol/PEG, Oleic Acid. Vegetarian. No added sugar, starch, or artificial preservatives. Gluten-free.
