

PADI

Emergency First Response

- **Primary Care (CPR)** – This course teaches you the steps and techniques for handling life-threatening emergencies. You'll practice eight skills for aiding patients who aren't breathing, have no heartbeat, may have a spinal injury, may be in shock or who may have serious bleeding. You'll learn to how to perform CPR and continue to monitor the patient, so that you provide every possible chance of survival while waiting for emergency medical services to arrive.
- **Secondary Care (First Aid)** – Because many medical conditions are not life-threatening and emergency medical services are sometimes delayed or unavailable, this course teaches you how to provide first aid that eases pain and reduces the risk of further harm. You'll learn to assess a variety of injuries and illnesses and practice bandaging and splinting.
- **Care for Children** – This course allows participants to learn, practice and apply emergency care skills specific to helping infants and children with medical emergencies. It's designed for those who work with children or are likely to have to respond to emergencies involving youngsters. This course is often integrated with Primary Care (CPR) and Secondary Care (First Aid) courses.
