

REBOUND PRP

Sometimes injuries exceed the body's natural ability to heal itself sufficiently. Platelet Rich Plasma (PRP) offers a concentrated injection of growth factors (GF) to help injuries heal faster.

WHY REBOUND PRP KITS BY ENSO DISCOVERIES

Designed by expert regenerative medicine veterinarians for use in the veterinary market.

- Low risk: no expensive capital needed to start using, with an all-inclusive price of just \$95.00
- Long shelf life of two years for each kit
- Patented design focuses on sterility, ease of use, multi-species usage, and validated science
- Kits contain patent pending tubes that help ensure sterility and just-in-time activation, and will also fit in your standard centrifuge
- Our custom-designed, soft, durable case holds our centrifuge (see reverse for more information), two PRP kits, and customer literature—perfect for mobile veterinarians treating animals on site
- Outstanding customer service led by our experts, who actually designed and use our products

- Validated at Kansas State University College of Veterinary Medicine
- First PRP system in the world to be validated in five species, with exact spin times and speeds per species
- Ability to adjust PRP based on indication (moderate platelets, low WBCs, high platelets, moderate WBCs)

Our Enso Discoveries team includes veterinary regenerative medicine professionals, bio-tech research experts, university professors, and practicing veterinarians who work with, use, and believe in regenerative medicine.

USES

- Osteoarthritis and joint issues
- Tendon, ligament, and muscle injuries
- Wound repair, including burns, and slow-healing wounds
- Theriogenology (endometritis)
- And much more

BENEFITS

- Autologous (safe, and no risk of rejection)
- Minimally invasive (blood draw and injection)
- Disease-modifying treatment
- Offers a new alternative to long-term drug use or surgery
- Keeps valuable service in-house with newly added revenue

FAQ

Is PRP technology new?

- No: it's been used in humans for over 20 years, with first paper published in 1998
- There are thousands of peer-reviewed scientific studies (canine, feline, equine, bovine, and human) about PRP

What if I am not familiar with joint injections?

- Enso Discoveries has detailed instructional videos available
- Enso Discoveries offers wet labs, video conferencing, or personal visits

Is it expensive to get started?

- No capital investment typically required
- If you need a centrifuge, ours is only \$349.00 (mobile 12v or 120v available)
- Each Rebound PRP kit is just \$95.00, including anticoagulant and all supplies needed to perform procedure

How can you offer so much for so little? Can I trust the quality?

YES! Because we design, university-validate, and manufacture our own products, there are no large fees being paid to human-focused companies for veterinary rights.

What if I already invested in another PRP system?

Other kits can cost as much as \$250.00 or more per usage. With our low price of \$95.00 per kit, you could save more than \$150.00 per usage and quickly recover your previous investment.
