Context for Behavioral Health Integration Learning Session

Functional Definition of Behavioral Health Integration:

“Integrated primary care combines medical and behavioral health services to more fully address the spectrum of problems that patients bring to their primary medical care providers. It allows patients to feel that, for almost any problem, they have come to the right place.”

From the PCPCH Standards:

Goals:

- **To expand participants’ knowledge of principles and theories of behavioral health integration.**
- **To understand steps that can be taken preparing practices to enhance competencies in behavioral health.**
- **To enhance practices’ skills in identification of children and youth with behavioral and mental health conditions, including tools and strategies for screening.**
- **To expand practices’ ability to manage children and youth with behavioral or mental health conditions within the primary care home.**
