Figure 6: Pediatric Care Together© Model

Six Elements - One Team

1. **Patient Identification**: Pediatric risk stratification (to be developed based on disease burden, past utilization and social determinants). Once identified, PCPs will help assess and prioritize.

2. **Assessment**: Pediatric specific screening tools are used to identify gaps in care and ensure social determinants are identified.

3. **Plan of Care**: Once the team has developed a relationship and assessed the patient, they meet to collaboratively create a patient centered care plan which is then documented in the chart.

4. **Team Coordination**: Team engages with the member and family. Identifies issues and works toward their goals and needs. Intensity of care highly variable and tailored to individuals.

5. **Transitions**: Patients who have an inpatient stay or receive services outside our system receive care coordination to ensure a smooth, well-managed transition. Team monitors reports to identify patients in ED/inpatient.

6. **Advanced Care Planning** – when appropriate
