CHILDREN WITH SPECIAL HEALTH CARE NEEDS: IDENTIFICATION AND CARE COORDINATION

DAVID A. BERGMAN MD
DEPARTMENT OF PEDIATRICS
STANFORD UNIVERSITY SCHOOL OF MEDICINE
Care coordination and CSHCN

- Why now?
- Why me?
- Why children with special health care needs?
- How do we identify CSHCN?
- What do we mean by care coordination?
Why Now? Gaps in Care for CSHCN

N=446

• 50% needed health care they could not get for their child
• 64% reported difficulty getting needed care
• 30% went without health care because of the cost
• 22% were unable to pay bills because of CYSHN care cost
• 28% have more than one CYSHN in the family
Why Now: Parents Burdened with Care Coordination

Indicator 14: CSHCN whose families spend 11 or more hours per week providing and/or coordinating child’s health care
CSHCN ages 0-17 years
Oregon vs. Nationwide

- Less than 1 hour: Oregon 47.8%, Nationwide 47.3%
- 1-4 hours per week: Oregon 36.6%, Nationwide 34.1%
- 5-10 hours per week: Oregon 6.9%, Nationwide 8.9%
- 11 or more hours per week: Oregon 8.7%, Nationwide 9.7%
A Journey Through Chronic Illness: A Family’s Perspective
Model 1—Stages of the Experience

- Pre-Diagnosis—perception that clinicians don’t take concerns seriously
- Feel need to push for more (e.g., 2nd opinion)
Model 1—Stages of the Experience

- Pre-Diagnosis
- Crisis Diagnosis & Treatment
- Reentry
- "New" Normal Maintenance & Complications
- Prep. for Transition
- Transition Wall

- Crisis—adopt tunnel vision at expense of family, job, other
- Information comes fast and fragmented
- Especially hard for non-English
Model 1—Stages of the Experience

- Pre-Diagnosis
- Crisis Diagnosis & Treatment
- Reentry
- "New" Normal Maintenance & Complications
- Prep. for Transition
- Transition Wall

- Reentry—abrupt transition from lots to little help
- Resources don’t always carry forward
- Parents fear lack of hospital safety net
Model 1—Stages of the Experience

- Pre-Diagnosis
- Crisis: Diagnosis & Treatment
- Reentry
- “New” Normal: Maintenance & Complications
- Prep. for Transition

“New” Normal—challenge to integrate medical care and everyday life activities
- Struggle to accept child is disabled
- Risk of complacency
Why Now? Health Care Reform

• Need to bend the cost curve

[Graph showing national health expenditures from 1961 to 2007, with two lines indicating private and public expenditures.]
Why Now: Accountable Care Act

- Increased coverage for children
- Support for medical homes and care coordination
- Opportunity to develop new models of care: ACO’s
- Payment reform that supports medical homes: Centers for Medicare and Medicaid Innovation
Why Now? Changes in Oregon

- Oregon Patient Centered Medical Home Program (PCMH)
  - To address the triple aim
  - To define the attributes of a PCMH
  - To develop practice standards for a PCMH
  - To develop measures for the PCMH
  - New payment systems that align incentives for the implementation of the PCMH
- Modification of the standards for children
- ECHO learning collaborative for QI
Why Me?

Model 1—Resource Access

- From a system level resources look overwhelming
- Families have a radial model of resources
- At the center, their base (hospital or clinic) includes their team of specialists
- Insurance, schools and therapists are in their next level of resources. Some families need assistance accessing this level
- Useful resources exits beyond their horizon, but most are unknown to families
Why Me? Leader of the Team

- The patient centered medical home is at the center of reform to better meet the needs of CHSCN.
- The primary care physician is best prepared to lead the team in the context of a medical home.
- Success is far from assured: The track record for the development of the PCMH for Medicare patient hasn’t been great.
- PCP’s must be prepared to take the lead or it will outsourced to others such as pediatric specialists, 3rd parties such as home care agencies and the dollars will follow.
Why Children with Special Health Care Needs

Willie Sutton, reputedly replied to a reporter's inquiry as to why he robbed banks by saying "because that's where the money is."
“Where is the Money” in Child Health?

Children with Special Health Care Needs
Great Opportunity and High Cost
Figure 8. Distribution of total expenditures per child, FY 2009

a. Age < 1

b. Age >= 1
Children with chronic conditions that expected to be lifelong, progressive and will require extensive care. Neff JM *Health Serv Res* 2004
- 0.4% of children
- 11% of pediatric health care costs
- 24% of pediatric hospital charges

Children with a chronic illness ICD 9 code which lasts > 12 months, involves several different organ systems and requires tertiary pediatric specialty care Simon TD *Pediatrics* 2010
- 26% of pediatric hospital days
- 40% of hospital charges
Cost of Care: The Opportunity

- 45% reduction in ED visits. Klitzner TS J, *_pediatr* 2010

Why Care Coordination

- **Medical Home perspective**
  - OHPR attributes of a medical home
    - Access
    - Accountability
    - Treat the whole child - comprehensive
    - **Coordination and integration**
    - Family centered

- **Family Perspective**
  - 9% of families with CSHCN spend > 11 hours per week on care coordination
  - Quote: “Someone should write a book call Chronic Illness Care for Dummies. There is so much I don’t know” – Parent of a child with CSHCN
Patient and family centered assessment driven, team based activity designed to meet the needs of children and youth while enhancing the care giving capabilities of families. Care coordination addresses interrelated medical, social, developmental, behavioral, educational and financial needs to achieve optimal health and wellness outcomes.

Antonelli R 2009
National Quality Forum: Preferred Practices Domains

- Health care home
- Pro-active plan of care and follow-up
- Communication
- Information systems
- Transitions or handoffs
- One additional domain: Family engagement
Care Coordination Attributes

- Access
- Continuity
- Integrated Services
- Family engagement
- Improved outcomes
- Effective transitions
Meet the needs Of Children and Youth while enhancing the care giving capabilities of families

**Goal**

- Increase Access
- Continuity of Care
- Integrated Services
- Family Engagement
- Improve individual outcomes
- Effective Transitions

**Primary Drivers**

- **Increase Access**
- **Continuity of Care**
- **Integrated Services**
- **Family Engagement**
- **Improve individual outcomes**
- **Effective Transitions**

**Secondary Drivers**

- **24X& Access to provider**
  - Email encounters and video conferencing
  - Appointment coordination
  - Access to PHI: PHR or Portal

- **Access to provider who knows patient and family**

- **Shared personal Health information: protocols, responsibilities etc.**
  - Referral management
  - PCP-Specialist Service Contracts
  - Designated Care Coordinator
  - School coordination program

- **Financial, DME, home health support**
  - Lay navigator
  - Family advisory council
  - System education for families

- **Designated case manager**
  - Care plans and goals
  - Care summaries
  - Patient registry
  - Home visits
  - Disease specific
  - Education for families

- **Co-management with adult physicians**
  - Individual transition plans
Tiered Care Coordination

- Meeting informational Needs
- Appointment Coordination
- Care Plan
- Service Contracts
- Health Care Summaries
- Care Conferences
- Assessment and Self-Management Support
- Home visits
- Case Management

Adopted from E.H. Wagner
McColl Institute; Seattle, WA
Identifying CSHCN: How?

Children with special health care needs (CSHCN) have a chronic physical, developmental, behavioral, or emotional condition and who also require health and related services of a type or amount beyond that required by children generally.

Maternal and Child Health Bureau
Identifying CSHCN: How?

- Formal systems using administrative data
  - 3M Clinical Risk Groups
    - Uses an episodic grouper to generate EDC or episodic diagnostic categories based on severity of ICD-9 code, time interval between encounters and other data
    - EDC’s are used to place children in health status categories for children with chronic conditions e.g. dominant, minor and moderate chronic
  - Complex Chronic Conditions
    - Last at least 12 months
    - Involve several different organ systems
    - Involve one organ system and requires pediatric subspecialty care
    - Hospitalization in tertiary pediatric care center
Identifying Children at Risk How?

- **Informal systems**
  - **Children’s Hospital of Wisconsin**
    - Complexity: number of active specialists and organ systems (minimum of 5 and 3, respectively, for enrollment)
    - Distance > 25 miles to tertiary center
      - PCP does not admit to tertiary center
      - Major psychosocial problems
      - Language barriers
      - Major technologies
      - Other miscellaneous things like multiple complex kids in the family
    - Fragility:
      - Number of hospital admissions / days in year prior to referral to our program (minimum of 2 and 10, respectively, for enrollment)
      - Number of different clinic visits in year prior to referral (> 10 for enrollment)
      - Technology dependence for sustaining life

Identifying CSHCN Using Patient Centered Data
Children with Special Health Care Needs (CSHCN) Screener®
(mail or telephone)

1. Does your child currently need or use medicine prescribed by a doctor (other than vitamins)?
   □ Yes → Go to Question 1a
   □ No → Go to Question 2

   1a. Is this because of ANY medical, behavioral or other health condition?
       □ Yes → Go to Question 1b
       □ No → Go to Question 2

   1b. Is this a condition that has lasted or is expected to last for at least 12 months?
       □ Yes
       □ No

2. Does your child need or use more medical care, mental health or educational services than is usual for most children of the same age?
   □ Yes → Go to Question 2a
   □ No → Go to Question 3

   2a. Is this because of ANY medical, behavioral or other health condition?
       □ Yes → Go to Question 2b
       □ No → Go to Question 3

   2b. Is this a condition that has lasted or is expected to last for at least 12 months?
       □ Yes
       □ No

3. Is your child limited or prevented in any way in his or her ability to do the things most children of the same age can do?
   □ Yes → Go to Question 3a
   □ No → Go to Question 4

   3a. Is this because of ANY medical, behavioral or other health condition?
       □ Yes → Go to Question 3b
       □ No → Go to Question 4

   3b. Is this a condition that has lasted or is expected to last for at least 12 months?
       □ Yes
       □ No
4. Does your child need or get **special therapy**, such as physical, occupational or speech therapy?
   - Yes → Go to Question 4a
   - No → Go to Question 5

4a. Is this because of ANY medical, behavioral or other health condition?
   - Yes → Go to Question 4b
   - No → Go to Question 5

4b. Is this a condition that has lasted or is expected to last for **at least** 12 months?
   - Yes
   - No

5. Does your child have any kind of emotional, developmental or behavioral problem for which he or she needs or gets **treatment or counseling**?
   - Yes → Go to Question 5a
   - No

5a. Has this problem lasted or is it expected to last for **at least** 12 months?
   - Yes
   - No

To qualify as having chronic or special health care needs, the following criteria must be met:

a) The child currently experiences a specific consequence.
b) The consequence is due to a medical or other health condition.
c) The duration or expected duration of the condition is 12 months or longer.
Identifying Children at Risk Why?

- Identification allows you to set appropriate rates for care
- Identification allows you to implement tiered care coordination
- Identification allows you to create a registry and intervene at a population level e.g. influenza immunization for high risk children
Setting rates for CSHCN

- Define your population
- Look at prior expenditures
- Project future costs
  - Depends on the duration the special health care needs
  - Different identification systems will varying power to predict duration of special needs and future expenditures
## Setting Appropriate Rates: How do you Predict Future Costs

Journal of Amb Care Management 2006
Next Steps

- Determine a system that can be used to identify and track children (registry) with special health care needs
- Engage in QI process to implement registry
- Identify a care coordination activity for your children with special health care needs
- Use QI activity to implement activity
CSHCN Identification System

- What system?
  - Administrative data driven systems
  - Informal systems
  - Patient centered systems

- Creation of a registry
  - Prospective
  - Retrospective

- Maintenance of registry
Identify a Care Coordination Activity for Your Children with Special Health Care Needs

- Choose an activity that cuts across chronic illness conditions
- Build on existing quality improvement efforts in your practice e.g. asthma action plans
- Consider using a tiered approach
- Some possibilities...
Group 1
Health Care Home

24x7 Access to Health Care Home
• Access to provider who knows family
• Email and phone access to providers
• Same day appt. with PCP; appt. within 3 days for specialists

Infrastructure to support
• Patient registry
• Referral tracking
• Measuring and reporting quality indicators

Case Manager (for children with complex medical conditions)
• Disease specific
• Facilitates family education about disease and disease management

Care Coordinator
• Referral management
• Appointment coordination
• Access to community resources
• Access to health information
• Care coord. with schools and Community agencies

Team based care
• Includes pediatric specialist

Patient Complexity

Do not cite or reproduce content without appropriate citation.
Group 2
Plan of Care and Follow-up

Individualized care plan

Patient Complexity

Care plan with:
• Goals
• Treatment Plan

Family education
• Self-management skills
• System navigation

Team based implementation of care plan
• Virtual teams with primary and specialty care

Care summaries
• Integrated across specialties
• Written for family and providers

Huddles to review complex patients

Family support
• Program enrollment
  ➢ Financial
  ➢ Family support
• Assistance in obtaining DME
  And home health services

School coordination program
Case manager
• Distinct from care coordinator
• May be hospital or plan based
Group 3
Communication

Shared PHI (plan of care)
- Family control
- Shared accountability for plan of care

Access to PHI through:
- Patient portal
- PHR
- Shared paper records

Standardized referrals and Consultation reports

Service agreements: PCP & specialist
- Evidence based protocols
- Articulation of PCP/specialist responsibility for plan of care
- Standards for access to PCP and specialists

Care coordination conferences
In person, by phone or video

Patient Complexity
Group 4
Information Systems

Standardized, integrated
Interoperable systems
• EHR
• Health information exchanges

Decision support for families
• Appointment reminders
• Care management reminders

Quality management systems
• Track quality indicators for care coordination
• Reports at health plan, practice and provider level

Referral management systems
• Track referral completion
• Track exchange of information pre- and post consultation

Personal health record or
Patient portal to EHR
Group 5
Transitions/Handoffs

Hospital discharge planning
- Coordinated with the PCP
- Change and update care Plan at discharge

Consistent hospital discharge planner who is part of health care team

Care conference with previous providers when family moves in or out of health plan

Individualized transition plan
- Transition to adult services
- Transition to and from long term care

Co-management with Adult providers
Family Advisory Council
- Representative of Population
- Training for new members
- Participation in program
- Planning and review

Education for Families
- System navigation
- Financial assistance
- Available programs and resources

Lay navigator for families
- Option for families
- Coordination with other educational programs
“Before I came here I was confused about this subject. Having listened to your lecture, I am still confused. But on a higher level.”

Enrico Fermi
