

Routine Inspection and Maintenance = Cost Savings

Did you know... by inspecting your HVAC system's condenser and evaporator coils yearly and performing regular cleaning maintenance, you can increase your building's energy efficiency.

Dirty coils force compressors to run longer, increasing energy usage and utility costs, decreasing the components' life and occupants' comfort. By regularly cleaning your building's coils, you can decrease energy usage and costs, while providing optimal comfort.

For more information on how routine maintenance can save you money, please visit nucalgon.com.

For more information on increasing your building's energy efficiency, please contact Steve Leister, at stevel@jacco.com or visit our website at www.jacco.com.
