

THE CHALLENGE

Many multi-tenant apartments and condos are built with architectural roofs that cannot handle rooftop mechanical equipment. In addition, it is now architect preference and included in many city ordinances that outdoor mechanical equipment be eliminated. These buildings and facilities need a cost effective alternative to provide heating and cooling in an energy efficient way.

THE SOLUTION

The Suburban DynaPack unit is a vertical, indoor, self-contained unit with electric cooling and gas heating. It is delivered completely pre-wired and pre-charged with the ability to be easily installed.

The unit eliminates exterior equipment while providing the comfort and efficiency of gas heat.

DynaPack Advantages:

- Up to 92% AFUE gas furnace
- ECM Motors to duct multiple rooms off of a single unit
- Optional MERV 13 filtration
- Single point power location
- No outdoor mechanical equipment
- Can be ducted to serve multiple rooms
- Reversible drain pan
