Jacksonville HVAC Company Installs Functional LG VRF Training Room

Nelson & Company built and installed a functional, LG stocked HVAC training room.

Nelson & Company built a fully-functional training room stocked with LG Variable Refrigerant Flow (VRF) equipment to train local contractors, service technicians, and client's on system services and repairs, and installation.

The new training room, housed in the Jacksonville office, will help the company provide much needed hands-on training. The training offered is geared towards engineers, owners, installing contractors and service technicians who use LG equipment in their businesses.

As manufacturer representatives for LG's HVAC line of equipment, Nelson & Company believes in the most efficient systems, clean air, and maintaining personal comfortable environments. The training room adds an extra layer of value to their existing partners and expands on the company's existing training programs that include all the equipment brands they represent.

When asked about the training room, Vice President John Nelson said, "We're excited to offer this to the valued partners we work with and to help them provide modern and efficient HVAC solutions to their customers." He continued, "Nelson & Company is all about air and the quality of indoor environments, this is one more tool we can use to support that mission."

The training room is available by appointment. You can schedule a training for your team by contacting the Jacksonville office. <https://ncjax.com/>

About Nelson & Company

Nelson & Company is a Jacksonville-based heating and cooling company representing manufacturers of the world's leading brands of HVAC equipment and parts. Established in 2006, it has become Northeast and Central Florida's number one resource for mechanical engineering, servicing, and installation of industrial and commercial air systems.
