

October 2018 update for Radius Capital Management

PERFORMANCE AT A GLANCE

Portfolio/Index	October Return	YTD Return To 10/31/18
Radius 100 (100% stock mutual funds)	-10.9%	-4.2%
Radius Index 100 (100% stock ETFs)	-10.1%	1.5%
U.S. Stock Benchmark (Vanguard S&P 500 Index Fund)	-6.8%	2.9%
Balanced Risk 75 Portfolio (target risk/volatility vs. S&P = 75%)	-5.8%	-7.6%
Radius Bond (100% bond mutual funds)	-0.4%	-2.2%
Radius Index Bond (100% bond ETFs)	-1.4%	-3.6%
Bond Benchmark (Vanguard Total Bond Index Fund)	-0.7%	-2.4%

U.S. and international stock markets posted sharp declines in October, with the S&P 500 dropping 6.8% and the international EAFE index down 8.0%. Small Cap stocks were particularly hard hit, with the Russell 2000 index losing 10.9% of its value. Given the Radius portfolios' concentration in Small Caps, it declined the same 10.9%. That said, the Radius 100 has rebounded nicely in the first week of November, gaining close to 4%. During October, Large Cap stocks outperformed both Small and Mid-Caps, and Value trounced Growth. This market behavior was a continuation of the shift to Large Cap and Value stocks that we saw in September. I am monitoring this situation carefully, as it could indicate we are entering the final stages of the current bull market. Bonds were broadly lower in September, with all bond categories except Short Government and International posting losses. The benchmark bond index closed the month down 0.7%, and more volatile long-term bonds dropped close to 3%.

MARKET CHARACTERISTICS

Stock market volatility [§]	Average (monthly avg. = 19, month end = 21)
Business Cycle Phase	Late Expansion (eighth out of nine "innings")
Dominant Investment Style (active vs. passive)	Mixed (although Sept. and Oct. both favored passive)

[§] In general, the higher the market volatility (as measured by the CBOE Volatility Index or VIX), the more the market is driven by investor emotions (greed and fear). Lower market volatility indicates a market environment based on fundamentals (economic growth, corporate earnings, etc.). The long-term average for the VIX is 20, 30 is considered high, 40 very high, and 50+ extreme.

LONG-TERM PERFORMANCE THROUGH 9/30/2018

The longer-term performance of the Radius portfolios continues to be strong. Since inception (1/1/2001), the Radius 100 portfolio has generated a net cumulative return of **+251%** (7.3% annualized) vs. a cumulative return of **+186%** (6.1% annualized) for the benchmark S&P 500 – with a comparable level of risk (i.e., standard deviation of monthly returns, maximum drawdown, and beta). Over the same time period, the more conservative Radius 60 (60% stock mutual fund, 40% bond mutual fund) portfolio grew **+204%** (6.4% annualized) vs. a **+164%** return (5.6% annualized) for its benchmark (60% S&P 500 Stock Index and 40% Total Bond Index).

Footnotes:

¹ Investment return numbers for the Radius 100 and Radius 60 reflect the (unaudited) performance of actual portfolios that have been invested since 1/1/2001. For the period prior to its inception date, the returns for the Radius 20 are calculated using the actual returns from the Radius 100 and 60.

² Returns for the Index portfolio prior to 7/30/2014 and Balanced Risk prior to 3/30/2015 are **back-tested** and not actual returns of accounts managed by Radius. Back-tested (simulated) performance results have certain inherent limitations. Unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not actually been executed, the results may have under- or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated investment strategies in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown.

³ The Balanced Risk 75 portfolio invests part of its assets in leveraged ETFs. These funds seek daily investment results – before fees and expenses – that are triple the return of stock (S&P 500, S&P Mid-Cap 400, Russell 2000), bond (20+ Year Treasury Bond), and commodity (gold, silver, oil) market indices. Using these leveraged ETFs results in greater volatility and a greater risk of loss.
