CLEAN FRONT IODINE BLOCKS

DRAIN TREATMENT

Product Description and Purpose

CLEAN FRONT IODINE BLOCKS are slow releasing with moisture sensitivity. Releases approximately 1 – 2.5 PPM iodine until equilibrium is reached. This product is economical since it is active only when adequate water is present for dissolution.

Features/Benefits

Lower drain maintenance. Elimination of the need to constantly check water traps for buildup of organic material that creates odor. Stops biomass buildup through a combination of iodine and surfactants. This prevents unwanted soils that might harbor bacteria.

Less preventative maintenance of condensate pans and drain tubes. Use in condensate pans lowers the number of drains that stop up from soil buildup. Their continuous release of iodine and surfactants mean no more daily check for clogs. Controls unwanted and unpleasant odors. High levels of iodine in drain water traps; drip pans and condensate pans prevent the presence of odor causing bacteria.

Reduced environmental sanitation costs. The use of these provides a level of continuous odor and soil prevention not obtainable with the use of manual, periodic cleaning. Less worker time is spent on the never-ending chore of cleaning out areas with standing water.

Surfaces Applicable

Drip Pans and Condensate Pans. **CLEAN FRONT IODINE BLOCKS** is suitable for use in food plants as an anti-clogging and anti-soil buildup device. It can also be used to deodorize condensate water and any other standing water in food plants or other facilities. This product is adequate for the control of most odors that occur from condensate and standing water.

General Usage Directions

Follow manufacturer directions.

TECHNICAL DATA

Physical Properties

Appearance	Amber block
Odor	None
Solubility in Water	Slowly soluble
Specific Gravity	1.5

Caution

Keep out of reach of children. For industrial use only. Read Safety Data Sheets for more information.
