The SNS-MR2326-S4C offers variety of IPv6 features include IPv6 ACLs, IPv6 QoS, IPv6 Policy-maps, IPv6 Management and basic L3 protocols such as RIP and Static routing protocol.

Enhanced Security Features

The SNS-MR2326-S4C switch provide enhanced security by using multiple mechanism to protect network. Port Security ensures access to switch ports based on MAC address limits the total number of devices from using a switch port and protects against attacks. Security Shell (SSH) and Secure Sockets Layer (SSL/HTTPS) encrypt network management information via Telnet and web, providing secure network management. Terminal Access Controller Access Control System (TACACS+) or Remote Access Dial-In User Service (RADIUS) Authentication enables centralized control of the switch and restricts unauthorized users from altering the configuration of the switch. IEEE 802.1x port-based ensures all users are authorized before being granted access to the network. User authentication is carried out using any standard-based RADIUS server. The SNS-MR2326-S4C switch offers Private VLAN isolated edge ports to ensure user privacy.

Comprehensive QOS and Rate Limiting

Eight hardware queues per port to enable comprehensive L2/4 QOS: Rate Limiting TCP/UDP, Priority Queue Scheduling and Priority Queue Scheduling of up to eight traffic types.

Traffic is prioritized according to 802.1p and DSCP, giving optimal performance to real-time applications such as voice and video.

Asymmetric bidirectional rate-limiting, per port or per traffic class, preserves network bandwidth and allowing maximum control of network resources.

Network Availability

With IEEE 802.1s Multiple Spanning Tree Protocol, IEEE 802.1w Rapid Spanning Tree Protocol and IEEE 802.1d Spanning Tree Protocol provides a loop-free network and redundant links to the core network with rapid convergence, to ensure faster recovery from failed links, enhancing overall network stability and reliability. IEEE 802.3ad Link Aggregation Control Protocol (LACP) increases bandwidth by automatically aggregating several physical links together as a logical trunk and providing load balancing and fault tolerance for uplink connections. IGMP snooping prevents flooding of IP multicast traffic and limits bandwidth intensive video traffic to only the subscribers. Broadcast Storm Control prevents faulty end stations from degrading overall system performance.

Complete variety of optical links Using SFP/XFP

The SNS-MR2326-S4C switch provides complete variety of optical links using 1000FX SFP and 10G XFP for both single mode and multi mode SFP. The SNS-MR2326-S4C is ideally for applications where security and reliability required. Using the 10G XFP expansions the SNS-MR2326-S4C offers flexibility and unlimited connectivity to the backbone.

The switch uses SFP/XFP transceivers for connections, providing the flexibility of running any mix of 100BASE-FX /1000BASE-FX and 10G multimode fiber up to 1.2 miles or single-mode fiber up to 120Km, respectively for cost-effective enterprise network solutions.

Comprehensive Management

The SNS-MR2326-S4C switch with Industry standard Command Line Interface (CLI) via Telnet or console port provides a common user interface and command set for users to manipulate the switch. Embedded user friendly web interface helps users quickly and simply configure switches. The switch can be managed and monitored using SNMP and Four groups of RMON for traffic and analysis. When upgrading firmware or fine tuning configuration, the dual software images and multiple configuration files can be used for backup. TFTP can be used to backup or restore firmware and configuration files.
