

New and Improved Powder Coat Painting Process

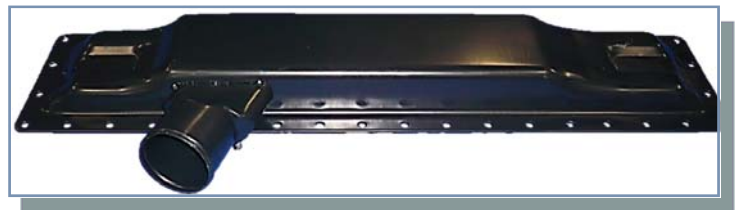

We are pleased to announce our all new Powder Coat Painting process. This new process is designed to resist rusting of all steel parts on our Surge Tanks, Steel Tanks & Brackets.

- Corrosion resistant against rust and chemicals
- No paint sags or runs
- A thicker paint film for that extra paint durability
- A more consistent even paint film coverage

- No drying or curing time involved, for a quick shiny durable clean finish
- Waterside of tanks protected with a durable corrosive resistant spray

- **AND...** Our all new Powder Coat Paint process, is a greener, more environmentally safe process, compared to that of common liquid spray paints
