PROJECTS:

- Salesforce: Salesforce development experience in Apex for utility, controller, batch, and test classes, and triggers. Configured custom settings, custom metadata, custom labels, validation rules, workflow rules, and other out of the box components. Platform development in Apex, Lightning components, Visualforce, and Skuid. Over [2.5] years of experience.
- Workday User Experience: Wrote Runbooks for four countries for a variety of User tasks in detail as manuals to smoothly lead Users through completion of each task. Broad knowledge of Workday User Experience by writing in-depth directions for Users.
- Graduate Final Project: Data mining with image processing. Color quantization using MacQueen's K-Means algorithm in Python. June 2017.
- Data Mining class: Semester-long group project with three other students on Wine Informatics. Designed and implemented Fuzzy-C Means clustering using Jaccard's Distance Formula in C++ on 1,010 wines with 305 binary attributes to evaluate judges from professional wine reviews.
- Software Engineering class: Worked in a group with five other students and other groups as a class-wide Student Semester Scheduling project in Java. Involved in the design, coding, integration, and implementation of the project. Team leader for two project milestones.
