

- **Anyone** who needs assistance can signal and get help.
- **Teachers** can get assistance without picking up the phone.
- Additional help can be requested if **a patient, resident or client** needs it.
- Updating **the housekeeping staff** location creates a better work environment.

**Staff Alert 911** is cloud software service with premise software links that uses cellular service to enhance communications for any unexpected events.

- Shake a cell phone to trigger an alert
- Staff receive a unique audio alert tone that operates even in silent mode so that they can react quickly
- In hotels it can integrate with any Property Management System; reporting on housekeeping staff progress and room status (clean, needing maintenance and so forth)
- In school's teachers and aids can get assistance even if they are separated from the phone across the room or in the hallway. (they have access to Bluetooth triggers)
- Any business can use the **Staff Alert 911** for unexpected events that need prompt attention.

We combine cellular apps with cloud services to provide enhanced internal and external communications. We integrate with Property Management Systems and Phone systems to expand features as needed. For example, we can report on 911 calls and deliver location information to management real-time. We produce room status reports in hospitality environments.

## Step by step with StaffAlert911:

1. Calls for help are triggered by a mobile application or with the wireless AWS button.
2. This alert is picked up by a wireless access point or cellular service.
3. The data is transferred to the Staff Alert cloud server
4. Staff Alert reads the data for customer identity, location and alert type
5. The Application identifies the list of managers to be informed and forms the message (Voice, text and or email)
6. Sends the message to the staff for action
7. Send the report the alert had been sent.

### Easier

- Download the application, watch the video of how the load the signal information
- Order the number AWS buttons needed – they are preprogrammed
- Upload the staff contacts group

### Faster

- Alert to communications is moments not minutes
- Alert staff in multiple ways (text, email, audio message) at the same time
- With multiple staff getting multiple messages – response time are faster and assured

### Better

- Better response times and better feedback
- We can build on these packages and integrate the system with fire and security systems
- We can also add phone system and external paging systems with informational tones or announcements
