Telemedicine provided by

What is telemedicine?

Telemedicine is the use of audio and video technology to provide care to patients at a distance.

What are the benefits of telemedicine?

- ✓ No transportation time or costs
- ✓ No need to take time off of work
- ✓ Access to Specialists
- ✓ Avoid the risk of exposure to illnesses
- ✓ Reduced wait time
- ✓ Eliminate child care issues

Is it secure?

All data is encrypted, your sessions are anonymous, and none of your information is stored. **Doxy.me** adheres to HIPAA, PIPEDA, and GDPR data privacy agreements.

“

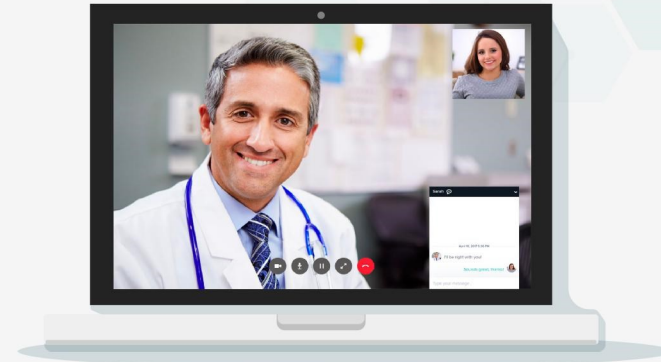

I can't believe how easy it was to meet with my provider. I am in my late 70s and not very technically savvy. Doxy.me was extremely easy to use. It was amazing not to have to drive anywhere.

Hilda Schultz, Patient

Do patients sign up for an account?

No, as a patient you actually don't need to create an account with us to see your provider. You can simply go to your provider's URL and check into their waiting room.

Your provider will start the visit when they are ready. Use headphones when possible.
