

MIDWEST HEALTH CONNECTION

MHC Advances Quality in Long-Term and Post-Acute Care

Midwest Health Connection (MHC) is one of the largest health information exchange (HIE) networks in the country with more than 28+ million electronic patient health records from across the Midwest. MHC's health data exchange services support the entire health care ecosystem, including health care providers, payors, State/Federal agencies and other health care stakeholders by providing complete and accurate patient electronic health records in real-time. This enables those within the health care delivery system to transform care delivery through better coordination of care, informed clinical decision making, reducing preventable errors and avoiding treatment duplication. No matter where a patient goes for treatment, patients expect their health information to be available to their treating providers. Providers need comprehensive health records available to them to be properly informed when making care decisions. Public health officials need access to public health data in order to properly respond and prevent health care emergencies. MHC fulfills these expectations and needs for the health care community by connecting each of these health care stakeholders to our network and enabling the sharing of electronic health data throughout the MHC network.

For your Long Term and Post-Acute Care (LTPAC) facility, MHC will help bridge the gap in transition of care and care coordination. The MHC network enables LTPAC clinicians to quickly and securely access and receive real-time comprehensive patient health records, resulting in improved quality of health care delivery by coordinating care, reducing preventable errors and avoiding treatment duplication. No matter where a patient goes for care, MHC will support your LTPAC facility by providing an up-to-date, comprehensive, longitudinal health record including clinical and claims data. MHC's service solutions improve health care outcomes and quality by supporting access to aggregated patient information to identify gaps in patient care and provide more clinical data to clinicians and care coordinators for enhanced clinical decision making.

Completing Health Information

Challenges for home health providers can impact the care a patient receives, transition of care and care coordination. With MHC, providers are able to quickly and easily access more complete patient records. MHC's secure electronic platform streamlines and simplifies accessing medical history, including patient demographics, lab results, allergies, encounters, problem lists, image reports, diagnosis, immunizations, and medications.

Coordination of Care

MHC serves as an unbiased, vendor agnostic, trusted health information technology solution that provides an advanced technological framework enabling access to comprehensive electronic patient records across from multiple data sources in real-time. For hospice and home care, MHC services help to improve coordination and transition of care for a patient with multiple providers on their care team.

Efficient & Effective

MHC supports its participating health care stakeholders, by providing an up-to-date, comprehensive, longitudinal health record. MHC's service solutions improve health care outcomes and quality by supporting access to aggregated patient information to identify gaps in patient care and provide more clinical data to clinicians and care coordinators for enhanced clinical decision making. MHC also improves effective workflow and efficient reporting while decreasing costs.
