

Tire Shredder specifications

Tire Shredder Specifications:

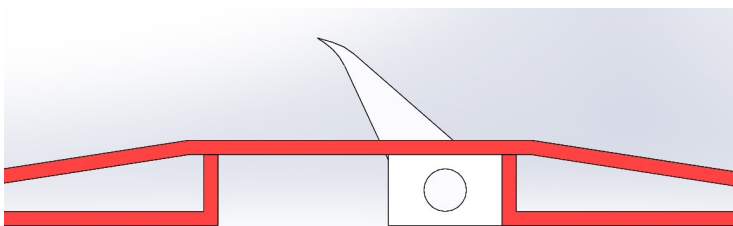

- 36 inch (Length)
- 22 inch (Width)
- 1.5 inch (Height with teeth locked down)
- 3.5 inch (Height with teeth deployed)

Tire Shredder design:

The Perimeter Security Products Tire Shredder has been designed to deflate tires when vehicle drives over it from the threat side. If you need vehicles to drive over vehicles from the threat side, the teeth can be locked into the down position as shown in photo below.

Vehicles traveling over the tire shredder from the non-threat side will cause the teeth to retract and not damage the tires. The tip of the tooth is tipped away from tires so that it doesn't cut into tire. See detail below and photo showing tip of tire shredder as it is being engaged by the tire.

Note, vehicle should not go over tire shredder at speeds greater than 10 mph and should go over perpendicular to the tire shredder.
