**Specialized**  
 Oracle Enterprise Content Management

**Specialized**  
 Oracle WebCenter

Employee intranets and corporate portals have been around for many years and have served to provide employees, customers, and partners with one-stop access to company information and facilitate business processes.

In many cases however, intranets and portals have failed to meet expectations and suffered from minimal use and low adoption. This is due to difficult content contribution processes, few incentives for overall use, and non-personalized user experiences. Fishbowl Solutions' Portal Solution Accelerator is a set of products and services that together provide a framework to design, build and deploy visually rich and relevant intranet and portal sites. This framework makes it easy for users to contribute content, ensures personalized experiences, and lays the foundation for widespread adoption and use.

## Why Portal Solution Accelerator?

- User-defined mega-menu structure allows navigational changes and content updates without IT involvement enabling increased information sharing across business units
- Multifaceted personalization ensures employees see the information most relevant to them; personalization is configurable by Employer, Type, Role, and Location
- Easy to package and redeploy to various business units or as multiple micro-sites
- Lowers ongoing cost of overall maintenance and administration by providing reusable framework that incorporates familiar design pattern and deployment process

## Accelerated Deployment

Fishbowl uses a step-by-step approach to implement your intranet or portal:

- **Analysis & Scoping:** Technology audit and requirements discussion
- **Branding & Design:** Discuss creative components and design resources
- **Statement of Work:** Requirements summary and roadmap for completion
- **User Interface Integration:** Integrate corporate branding and design elements
- **Installation, Configuration, Testing:** Install components, test and tune
- **Content Contribution:** Business units check in content for their site or portal
- **Launch:** Live Site!

## Further Maximize Oracle Software Investments

Fishbowl Solutions' Portal Solution Accelerator offering utilizes features from Oracle WebCenter Content and WebCenter Portal. This enables organizations using both products to leverage the inherent capabilities of each, and provides the ability to use standard integrations with other Oracle applications and supporting technologies.
