

Types of computers

TYPES OF COMPUTERS

Computers are of **different types** and they come in **different sizes**.

The computers that are kept on a desk are called **desktop computers**.

Some desktop computers come with a separate **CPU cabinet**, a **monitor**, and a **keyboard**. All these are connected to the **CPU cabinet**.

These types of computers are called **desktop computers**.

Desktop computer with a CPU cabinet

Desktop computer with a CPU inside the monitor

Nowadays, there are also desktop computers that have a monitor with all the parts of the CPU cabinet inside it.

Small computers that can be kept on our laps are called **laptops**.

This computer is called a **laptop**. It is small enough to keep on your lap.

Laptop

A laptop can be carried around by one person. It can also work on a battery.

Smaller computers that fit into the palm of our hand are called **palmtops**.

Some of the palmtops can be carried around in our pockets too. They also work on batteries.

This is a **palmtop**.
