

FLEXDRILL

Flex-Drill by CATH TIP is the most flexible, cost-effective option for hole forming in catheter prototypes and early development applications.

The drill is handheld and operated by a foot pedal making it quick and easy to try new hole diameters or patterns in a variety of different tubing materials. The Flex-Drill utilizes the superior Flow Thru™ bit technology found in CATH TIP's hole forming machines allowing for easy core evacuation and a clean workstation.

CATH TIP is committed to help your business succeed with superior equipment and service.

BENEFITS

Flexible development platform for quick prototyping

- Hold like a pen to place holes where desired
- Additional accessories: drill press, motion platform, etc.
- Open source tooling design platform
- Adjustable from 80-4000 RPM for different materials

Uses razor sharp Flow Thru™ core capturing drills

- Over 2 dozen sizes of drill bits from 0.0215"-0.086"
- Cores are cut, captured inside the drill bit, and evacuated to a filter
- Maintains a clean workstation

Cost effective

- Great for prototyping, development, and early production

Pilot/Production ready

- Stainless and Delrin fabricated parts great for lab or clean room

Plug n' Play

- Configurable for 120V or 240V
- Air pressure regulation built in
- Includes starter pack with 5 drills of customer's choice in size
