There are many factors determining the depopulation of human settlements; some of them are natural such as earthquakes, tsunamis, climate-change, pandemics, avalanches and volcanic eruptions, others are anthropic, like wars, planning, economic policies and deportation. In order to revive abandoned towns, not much can be done for the natural causes, even though risk-mitigation measures may be deployed, but it is possible to reverse the human factors. Nevertheless if the settlement is damaged it is necessary to restore or rebuild it. The conference will compare different case studies in order to provide the necessary theoretical framework for the Summer school, which will focus on Castelvecchio Calvisio, a medieval hilltop town in the Abruzzo region (Italy), today almost abandoned for an intense migration which begun in the 1950’s and the damages caused by the 2009 L’Aquila earthquake.
