

Trees

Sketchbook

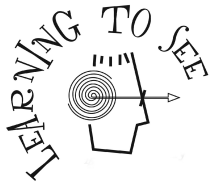

The silhouette - this is the outside edges of the whole tree, like the shape a shadow would make.

Leaves - Observe the unique angle of each leaf. Can you see veins? Does the leaf look the same on both sides?

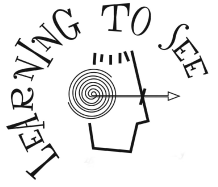

Branches

Which directions and angles do the branches grow?

Bark - This is the 'skin' of the tree that protects it. Observe the textures from rough to smooth!

Roots - Do we always see them?

Other details - Trees are like their own little ecosystems! What else do you see?
Flowers? Berries? Buds? Bugs?
