

TRANSMIX DISTILLATION UNIT

CLIENT

Equilon Enterprises, LLC

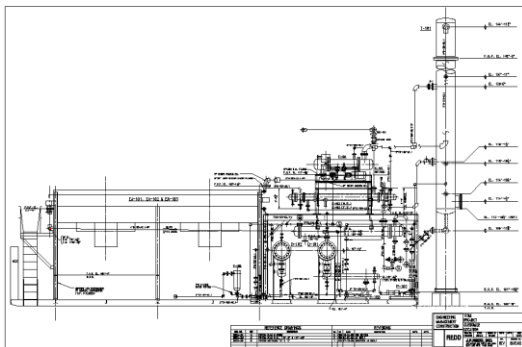

PROJECT DESCRIPTION

Client needed facility to separate gasoline and diesel fuel from transmix stream at an existing tank farm and terminal.

REDD provided conceptual design, process simulation, equipment specifications, structural design, modular fabrication process safety management (HAZOP) and startup support.

PROJECT FEATURES

- Modular distillation facility including all necessary processing equipment including pumps, heat exchangers, distillation column, filters, vacuum pump, air coolers and accumulators.
- Fully automated.
- On skid electrical and instrumentation panels.
- Separate modular hot oil heating system.
- Proprietary process design and components.
- Capable of processing a wide range of transmix feed streams.

PROJECT COMPLETION
1999
