

# Cunnilingus Positions

Cunnilingus is when a man gives a woman oral sex. This is just to distinguish who is receiving the oral pleasure. All of the positions I'm talking about today will help a woman get into great positions while her husband pleases her with his mouth.

## **On Knees While Leaning Back**

If you want to get a bit more active with your oral pleasure, this is a great position. You will get on your knees then lean back using your hands to prop yourself up.

Have your lover get into a comfortable position so that he can reach you. Don't be afraid to arch your back. It will actually make the sensations feel even better.

## **Kneeling Over His Face**

Straddle your husband's face with your knees right above his shoulders. You will need to spread your legs enough to be close enough to his mouth for him to please you. He can also use his fingers inside of you in this position.

You can either keep yourself positioned on all fours, or you can sit up while he pleases you. Sitting up will put more strain on your legs than being on all fours. Switch it up so that you can get the break your legs need.

## **Legs Over His Shoulders**

Lay on your back and bring your knees up toward your chest. Have your man lay on his stomach with his face between your legs. Once he gets into position, you can put your legs over his shoulders.

During this move, you might want to bring your legs back up to your chest for a more stimulating position. Move your legs up or out to change to figure out what you like.

## **Sit On a Counter or Table**

Sit on a counter or table that is high enough for your husband to reach you. He might need to get on his knees if the table is shorter. You can also sit on a pillow if you are not quite high enough for him to reach you.

He will need to bend over or sit in a chair to get to you comfortably. You will need to spread your legs and lean back. Either you can prop yourself up with your hands, or lean against a wall if you are on a counter.
