

OUR CONSTRUCTION INSPECTION SYSTEM

With this product, an inspector must complete a full walk-around of the scaffolding by passing over strategically placed Radio Frequency Identification tags. Only after the entirety of the scaffold has been inspected, the tag at the bottom is signed off on.

With this technology, your company can ensure the safety of its employees and workplaces, minimizing the costs associated with failure to follow procedure.

OSHA FINES

In 2016, Fines for standard violations went up 78.2%. The maximum penalty for a willful violation increased from **\$70,000 TO \$124,709** per violation! For the 2016 fiscal year, OSHA issued 3,900 scaffolding related citations.

This had significant implications for all businesses, but especially small businesses. There are many ways to avoid these fines and stay in compliance with the standards for the industry. (USFOSHA.com)

GLOBAL INDIGENOUS SUPPLY

- Solutions for 100% Compliance
- Protecting People, Environment, Assets, Reputation
- As individuals who have faced the everyday challenges associated with working in construction, we know the solutions that will work for your company.

DID YOU KNOW?

Scaffolding accidents result in **4,500** injuries each year and almost 30 percent of all workplace incidents from falls involve scaffolding or ladders.

This costs American employers over **\$90 million** in lost work time. (Bureau of Labor Statistics (BLS))

25% of workers hurt in scaffold accidents had received no scaffold safety training and 77% of scaffolds lack guardrails.
