HIGH DEFINITION MULTIMEDIA INTERFACE
Preface

R&TTE Directive
This device is in compliance with the essential requirements and other relevant provisions of the R&TTE Directive 1999/5/EC.

This device will be sold in the following EEA countries: Austria, Italy, Belgium, Liechtenstein, Denmark, Luxembourg, Finland, Netherlands, France, Norway, Germany, Portugal, Greece, Spain, Iceland, Sweden, Ireland, United Kingdom, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Slovakia, Poland, Slovenia.

ErP Off Mode Power Consumption Statement:
The figures below note the power consumption of this computer in compliance with European Commission (EC) regulations on power consumption in off mode:

- Off Mode < 0.5W
CE Marking

This device has been tested to and conforms to the regulatory requirements of the European Union and has attained CE Marking. The CE Mark is a conformity marking consisting of the letters “CE”. The CE Mark applies to products regulated by certain European health, safety and environmental protection legislation. The CE Mark is obligatory for products it applies to: the manufacturer affixes the marking in order to be allowed to sell his product in the European market.

This product conforms to the essential requirements of the R&TTE directive 1999/5/EC in order to attain CE Marking. A notified body has determined that this device has properly demonstrated that the requirements of the directive have been met and has issued a favorable certificate of expert opinion. As such the device will bear the notified body number 0560 after the CE mark.

The CE Marking is not a quality mark. Foremost, it refers to the safety rather than to the quality of a product. Secondly, CE Marking is mandatory for the product it applies to, whereas most quality markings are voluntary.
FCC Statement
(Federal Communications Commission)
You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Re orient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the service representative or an experienced radio/TV technician for help.

**Operation is subject to the following two conditions:**

1. This device may not cause interference.
   And
2. This device must accept any interference, including interference that may cause undesired operation of the device.
FCC RF Radiation Exposure Statement:

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

⚠️ Warning

Use only shielded cables to connect I/O devices to this equipment. You are cautioned that changes or modifications not expressly approved by the manufacturer for compliance with the above standards could void your authority to operate the equipment.
IMPORTANT SAFETY INSTRUCTIONS

Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock, and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using this equipment with a telephone line (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit according to the model’s requirements:

- Full Range AC/DC Adapter - AC Input 100 - 240V, 50 - 60Hz, DC Output 19.5V, 9.23A (180 Watts) minimum.
Instructions for Care and Operation

The notebook computer is quite rugged, but it can be damaged. To prevent this, follow these suggestions:

1. **Don’t drop it, or expose it to shock.** If the computer falls, the case and the components could be damaged.

2. **Keep it dry, and don’t overheat it.** Keep the computer and power supply away from any kind of heating element. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.
3. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.

4. **Follow the proper working procedures for the computer.** Shut the computer down properly and don’t forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.

5. **Take care when using peripheral devices.**

   - Do not turn off the power until you properly shut down all programs.
   - Do not turn off any peripheral devices when the computer is on.
   - Do not disassemble the computer by yourself.
   - Perform routine maintenance on your computer.
   - Use only approved brands of peripherals.
   - Unplug the power cord before attaching peripheral devices.
Servicing
Do not attempt to service the computer yourself. Doing so may violate your warranty and may expose you and the computer to electric shock. Refer all servicing to authorized service personnel. Unplug the computer from the power supply. Then refer servicing to qualified service personnel under any of the following conditions:

- When the power cord or AC/DC adapter is damaged or frayed.
- If the computer has been exposed to rain or other liquids.
- If the computer does not work normally when you follow the operating instructions.
- If the computer has been dropped or damaged (do not touch the poisonous liquid if the LCD panel breaks).
- If there is an unusual odor, heat or smoke coming from your computer.

**Bottom Cover Removal Warning**
Users should not remove any cover(s) and/or screw(s) for the purposes of device upgrade as this may violate the terms of your warranty. If you need to replace/remove the hard disk/RAM/optical device etc., for any reason, please contact your distributor/supplier for further information.

**Removal Warning**
When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and screw(s) before restoring power to the system.
Also note the following when the cover is removed:
- Hazardous moving parts.
- Keep away from moving fan blades.
Power Safety

The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC/DC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies (i.e. AC/DC adapter or car adapter).

**Warning**

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines and power cord).

You must also remove your battery in order to prevent accidentally turning the machine on. **Before removing the battery disconnect the AC/DC adapter from the computer.**

Polymer Battery Precautions

Note the following information which is specific to polymer batteries only, and where applicable, this overrides the general battery precaution information overleaf.

- Polymer batteries may experience a slight expansion or swelling, however this is part of the battery’s safety mechanism and is not a cause for concern.
- Use proper handling procedures when using polymer batteries. Do not use polymer batteries in high ambient temperature environments, and do not store unused batteries for extended periods.
- If you are working in areas of low temperature use the AC/DC adapter to power the computer.

See also the general battery precautionary information overleaf for further information.
Preface

General Battery Precautions

- Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
- Do not remove any batteries from the computer while it is powered on.
- Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
- If you do not use the battery for an extended period, then remove the battery from the computer for storage.
- Recharge the batteries using the notebook’s system. Incorrect recharging may make the battery explode.
- Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
- Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
- Keep the battery away from metal appliances.
- Affix tape to the battery contacts before disposing of the battery.
- Do not touch the battery contacts with your hands or metal objects.

Battery Disposal & Caution

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.
Cleaning
Do not apply cleaner directly to the computer; use a soft clean cloth.
Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Cleaning Instructions
(For Computer Models Supplied with Light Blue Cleaning Cloth)
Some computer models in this series come supplied with a light blue cleaning cloth. To clean the computer case with this cloth follow the instructions below:

1. Power off the computer and peripherals.
2. Disconnect the AC/DC adapter from the computer.
3. Use a little water to dampen the cloth slightly.
4. Clean the computer case with the cloth.
5. Dry the computer with a dry cloth, or allow it time to dry before turning on.
6. Reconnect the AC/DC adapter and turn the computer on.
Travel Considerations

As you get ready for your trip, run through this list to make sure the system is ready to go:

1. Check that the battery pack and any spares are fully charged.
2. Power off the computer and peripherals.
3. Close the display panel and make sure it's latched.
4. Disconnect the AC/DC adapter and cables. Stow them in the carrying bag.
5. The AC/DC adapter uses voltages from 100 to 240 volts so you won’t need a second voltage adapter. However, check with your travel agent to see if you need any socket adapters.
6. Put the notebook in its carrying bag and secure it with the bag’s straps.
7. If you’re taking any peripherals (e.g. a printer, mouse or digital camera), pack them and those devices’ adapters and/or cables.
8. Anticipate customs - Some jurisdictions may have import restrictions or require proof of ownership for both hardware and software. Make sure your “papers” are handy.

Power Off Before Traveling

Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the Vents/Fan Intakes to be blocked. To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intakes while the computer is in use.
On the Road

In addition to the general safety and maintenance suggestions in this preface, and Chapter 8: Troubleshooting, keep these points in mind:

**Hand-carry the notebook** - For security, don’t let it out of your sight. In some areas, computer theft is very common. Don’t check it with “normal” luggage. Baggage handlers may not be sufficiently careful. Avoid knocking the computer against hard objects.

**Beware of Electromagnetic fields** - Devices such as metal detectors & X-ray machines can damage the computer, hard disk, floppy disks, and other media. They may also destroy any stored data - Pass your computer and disks around the devices. Ask security officials to hand-inspect them (you may be asked to turn it on). **Note:** Some airports also scan luggage with these devices.

**Fly safely** - Most airlines have regulations about the use of computers and other electronic devices in flight. These restrictions are for your safety, follow them. If you stow the notebook in an overhead compartment, make sure it’s secure. Contents may shift and/or fall out when the compartment is opened.

**Get power where you can** - If an electrical outlet is available, use the AC/DC adapter and keep your battery(ies) charged.

**Keep it dry** - If you move quickly from a cold to a warm location, water vapor can condense inside the computer. Wait a few minutes before turning it on so that any moisture can evaporate.
Preface

Developing Good Work Habits

Developing good work habits is important if you need to work in front of the computer for long periods of time. Improper work habits can result in discomfort or serious injury from repetitive strain to your hands, wrists or other joints. The following are some tips to reduce the strain:

• Adjust the height of the chair and/or desk so that the keyboard is at or slightly below the level of your elbow. Keep your forearms, wrists, and hands in a relaxed position.
• Your knees should be slightly higher than your hips. Place your feet flat on the floor or on a footrest if necessary.
• Use a chair with a back and adjust it to support your lower back comfortably.
• Sit straight so that your knees, hips and elbows form approximately 90-degree angles when you are working.
• Take periodic breaks if you are using the computer for long periods of time.

Remember to:
• Alter your posture frequently.
• Stretch and exercise your body several times a day.
• Take periodic breaks when you work at the computer for long periods of time. Frequent and short breaks are better than fewer and longer breaks.
Lighting
Proper lighting and a comfortable viewing angle can reduce eye strain and shoulder and neck muscle fatigue.

- Position the display to avoid glare or reflections from overhead lighting or outside sources of light.
- Keep the display screen clean and set the brightness and contrast to levels that allow you to see the screen clearly.
- Position the display directly in front of you at a comfortable viewing distance.
- Adjust the display-viewing angle to find the best position.

LCD Screen Care
To prevent image persistence on LCD monitors (caused by the continuous display of graphics on the screen for an extended period of time) take the following precautions:

- Set the Windows Power Plans to turn the screen off after a few minutes of screen idle time.
- Use a rotating, moving or blank screen saver (this prevents an image from being displayed too long).
- Rotate desktop background images every few days.
- Turn the monitor off when the system is not in use.

LCD Electro-Plated Logos
Note that in computers featuring a raised LCD electro-plated logo, the logo is covered by a protective adhesive. Due to general wear and tear, this adhesive may deteriorate over time and the exposed logo may develop sharp edges. Be careful when handling the computer in this case, and avoid touching the raised LCD electro-plated logo. Avoid placing any other items in the carrying bag which may rub against the top of the computer during transport. If any such wear and tear develops contact your distributor/supplier.

Chapter 1: Quick Start Guide

Overview

This Quick Start Guide is a brief introduction to the basic features of your computer, to navigating around the computer and to getting your system started. The remainder of the manual covers the following:

- Chapter 2 A guide to using some of the main features of the computer e.g. the storage devices (hard disk, optical device, Multi-in-1 card reader), TouchPad & Mouse & Audio.
- Chapter 3 The computer’s power saving options.
- Chapter 4 The installation of the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems.
- Chapter 5 An outline of the computer’s built-in software or BIOS (Basic Input Output System).
- Chapter 7 A quick guide to the computer’s PC Camera, Wireless LAN, Combo Bluetooth & WLAN, TPM (security) and Intel modules (some of which may be optional depending on your purchase configuration).
- Chapter 7 A troubleshooting guide.
- Appendix A Definitions of the interface, ports/jacks which allow your computer to communicate with external devices.
- Appendix B Information on Control Center.
- Appendix C Information on the Video driver controls.
- Appendix D The computer’s specification.
Quick Start Guide

Advanced Users
If you are an advanced user you may skip over most of this Quick Start Guide. However you may find it useful to refer to “What to Install” on page 4 - 1 and “BIOS Utilities” on page 5 - 1 in the remainder of the User’s Manual. You may also find the notes marked with a  of interest to you.

Beginners and Non-Advanced Users
If you are new to computers (or do not have an advanced knowledge of them) then the information contained in the Quick Start Guide should be enough to get you up and running. Eventually you should try to look through all the documentation (more detailed descriptions of the functions, setup and system controls are covered in the remainder of the User’s Manual), but do not worry if you do not understand everything the first time. Keep this manual nearby and refer to it to learn as you go. You may find it useful to refer to the notes marked with a  as indicated in the margin. For a more detailed description of any of the interface ports and jacks see “Interface (Ports & Jacks)” on page A - 1.

Warning Boxes
No matter what your level please pay careful attention to the warning and safety information indicated by the ☢ symbol. Also please note the safety and handling instructions as indicated in the Preface.
Not Included
Operating Systems (e.g. Windows 10) and applications (e.g. word processing, spreadsheet and database programs) have their own manuals, so please consult the appropriate manuals.

Drivers
If you are installing new system software, or are re-configuring your computer for a different system, you will need to install the drivers listed in “Drivers & Utilities” on page 4-1. Drivers are programs which act as an interface between the computer and a hardware component e.g. a wireless network module. It is very important that you install the drivers in the order listed. You will be unable to use most advanced controls until the necessary drivers and utilities are properly installed. If your system hasn’t been properly configured (your service representative may have already done that for you); refer to Chapter 4 for installation instructions.

Ports and Jacks
See “Interface (Ports & Jacks)” on page A-1 for a description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.

Model Differences
This notebook series includes two different models based on specification, that vary slightly in appearance. Note that though your computer may look slightly different (e.g. case color) from that pictured throughout this manual, all ports, jacks (other than those indicated in the specification) and general functions are the same for all the design styles (see Appendix D for further details).
Quick Start Guide

System Startup

1. Remove all packing materials, and place the computer on a stable surface.
2. Securely attach any peripherals you want to use with the notebook (e.g. keyboard and mouse) to their ports.
3. **When first setting up the computer use the following procedure** (as to safeguard the computer during shipping, the battery will be locked to not power the system until first connected to the AC/DC adapter and initially set up as below):
   - Attach the AC/DC adapter cord to the DC-In jack at the rear of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter and the battery will now be unlocked.
4. Use one hand to raise the lid/LCD to a comfortable viewing angle (**do not exceed 130 degrees**); use the other hand to support the base of the computer (**Note: Never** lift the computer by the lid/LCD).

![Figure 1 - 1 - Computer with AC/DC Adapter Plugged-In & LCD/Lid Open](image)

**Shutdown**  
Note that you should always shut your computer down by choosing the **Shut Down** command in **Windows** (see page 1 - 34). This will help prevent hard disk or system problems.
System Software
Your computer may already come with system software pre-installed. Where this is not the case, or where you are re-configuring your computer for a different system, you will find the *Windows 10 (64-bit)* operating system is supported.

Windows OS

Note that the information included on the following pages is for *Windows 10 only*.

In order to run *Windows 10 (64-bit)* your computer requires a minimum **8GB** of system memory (RAM).

The illuminated colored keyboard has an embedded numerical keypad for easy numeric data input, and features function keys to allow you to change operational features instantly. See Table 1 - 4, on page 1 - 12 for full function key combination details, and see “Illuminated Color LED Keyboard” on page 1 - 9.

Special Characters

Some software applications allow the number-keys to be used with Alt to produce special characters. These special characters can only be produced by using the numeric keypad. Regular number keys (in the upper row of the keyboard) will not work. Make sure that NumLk is on.

Other Keyboards

If your keyboard is damaged or you just want to make a change, you can use any standard USB keyboard. The system will detect and enable it automatically. However special functions/hot-keys unique to the system’s regular keyboard may not work.

Hold down the Fn Key and Scr Lk to enable scroll lock and check the LED indicator for status.

USB Ports

On this computer model, there is one USB 3.2 Gen 1 Type A port, one USB 3.2 Gen 2 Type A port, one USB 2.0 port and one Type C DisplayPort 1.4 over USB 3.2 Gen 2.

**Note:** The maximum amount of current supplied by the USB Type-C port is 500 mA for USB2.0/900 mA for USB 3.2.
Combination Audio Jacks

Note that the combination audio jacks can support a microphone, headphone or headset (i.e. a combination microphone/ headphone).

1. When a device is plugged in to the combination audio jack a dialog (“Which device did you plug in?”) box will pop-up.

2. Select the appropriate device from the drop-down menu according to the device plugged-in (e.g. Headset), and then click **OK** to save the setting.

Windows 10 Start Menu

Most of the apps, control panels, utilities and programs within Windows 10 can be accessed from the Start Menu by clicking the icon in the taskbar in the lower left corner of the screen (or by pressing the Windows Logo Key on the keyboard). The Start Menu will contain a number of apps, and many more will be installed as you add more applications etc. Not all of these apps may fit on the screen so you can use the scroll bar to move up and down the screen.

Windows Screens

Note that the Windows screens on the following pages are included as a basic guide and introduction to navigating around Windows 10. However note that these screens are always subject to change, upgrade and redesign. Check the Microsoft website for details.

Right-Clicking the Windows Logo In Start Menu

Right-click the Start Menu icon (or use the Windows Logo Key + X key combination) to bring up an advanced Context Menu of useful features such as Apps and Features, Power Options, Task Manager, Search, File Explorer, Device Manager, Computer Management and Network Connections etc.

![Figure 1 - Right-Click Windows Logo in Start Menu](image)
Pining/Unpinning Apps & Programs to/from the Start Menu
To make things easy to find you can add and remove tiles for apps and programs to the Start Menu. Right-Click on a program’s icon and select **Pin to Start** from the drop-down menu. To remove an app or program from the Start Menu right-click the icon and select **Unpin from Start**. You can use the same method to **pin apps/programs to/from the taskbar** (select pin to taskbar/unpin this program from the taskbar).

*Figure 1 - 14 - Pin to Start/Unpin from Start*
Windows 10 Control Panel

In many instances throughout this manual you will see an instruction to open the Control Panel. The Control Panel can be accessed in a number of ways in Windows 10.

- Select Control Panel under the Windows System item in the Start Menu.
- Type Control Panel into the Search box in the taskbar and click on the icon when it pops up.
- You can pin the Control Panel tile to Start or taskbar.

In many instances throughout this manual you will see an instruction to access the notification area of the taskbar. The notification area of the taskbar in the bottom right of the screen. Some of the Control Panels and applications referred to throughout the course of this manual can be accessed from here.

You can pin/unpin apps to/from the taskbar in much the same way as you can to the Start screen (see “Pining/Unpinning Apps & Programs to/from the Start Menu” on page 1 - 23).
**Action Center**

The **Action Center** appears as a vertical panel on the right side of the screen (click **Expand** to view the full panel) when you swipe in from the right or click the button in the notification tray. This gives you access to commonly needed functions like Network, All Settings, Airplane Mode, and Project etc. The Action Center also contains a **Brightness** slider when expanded.

Video Features

You can switch display devices, and configure display options, from the Display settings (click the Start Menu and click Settings > System or right-click the desktop and select Display settings) control panel (see page 1-30). In Windows 10 it is possible to quickly configure external displays from the Project menu (press the Windows logo key + on your keyboard and the P key or Fn + F7).

Microsoft Hybrid Graphics

Your computer will feature Microsoft Hybrid Graphics switchable graphics technology. This seamless technology is designed to get best performance from the graphics system while allowing longer battery life, without having to manually change settings. The computer’s operating system (and some applications) will automatically switch between the integrated UMA (Unified Memory Architecture) GPU (iGPU) and the discrete GPU (dGPU) when required by the applications in use. This switch is seamless to the user.
To Configure Displays using Project

1. Attach your display to the appropriate port, and turn it on.
2. Press the + P (or Fn + F7) key combination.
3. Click on any one of the options from the menu to select **PC screen only**, **Duplicate**, **Extend** or **Second screen only**.
4. You can also click **Connect to a wireless display** at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.

**Figure 1 - 19 - Project (Devices)**

**Configuring External Displays**

When multiple external display are attached it is recommended that you use the **System** (in Settings - page C - 9) control panel or the + P (or Fn + F7 - page C - 8) key combination, to configure the external displays.

External displays can also be configured by using the **Intel Graphics Command Center** (page C - 17) control panel.

Futher video configuration options are available in the **NVIDIA** (page C - 34) control panel.
Quick Start Guide

To access the Display Settings:

1. You can quickly adjust the display by right-clicking the desktop and selecting Display Settings.
2. Adjust the settings for Brightness and color, Scale and layout, Resolution and Orientation from the menus.
3. When an external display is attached you can arrange the display configuration from the Multiple Displays menu, and arrange the configuration from Select and rearrange displays.
4. Click Apply to save any changes made.

Chapter 2: Features & Components

Overview
Read this chapter to learn more about the following main features and components of the computer:

- Hard Disk Drive/Solid State Drive
- Multi-In-1 Card Reader
- Touchpad and Buttons/Mouse
- Realtek Audio Console
Features & Components

Hard Disk Drive/Solid State Drive

The hard disk drive/solid state drive is used to store your data in the computer. The hard disk can be taken out to accommodate other serial (SATA) hard disk drives, however you will need to contact your distributor/supplier to do this in order to avoid violating the terms of your warranty. The system can also support solid state drives as storage devices (see “Storage” on page D - 2 for specification information).
Multi-In-1 Card Reader

The card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device, and can be accessed in the same way as your hard disk(s). Make sure you install the card reader driver (see “Card Reader” on page 4 - 9).

- MMC (MultiMedia Card) / RSMC
- SD (Secure Digital) / Mini SD / SDHC / SDXC up to UHS-II

*Note: Some of these cards require PC adapters that are usually supplied with the cards.

---

Push-Push Card Reader

The card reader features a push-in/push-out card insertion and ejection mechanism. Simply push the card to insert and eject it, however Ms Duo cards require an adapter.

Features & Components

Touchpad and Buttons/Mouse

The Touchpad is an alternative to the mouse; however, you can also add a mouse to your computer through one of the USB ports. The Touchpad buttons function in much the same way as a two-button mouse.

Touchpad Sensitivity

The mouse button zones at the bottom of the pad measure about 15mm from the bottom of the pad, and the left and right buttons are divided roughly down the middle. Press the left button zone for a left click, and right button zone for a right click action. Note that the Touchpad and Buttons valid operational area is that indicated within the red dotted lines below.

Figure 2 - 2

Mouse Driver

If you are using an external mouse your operating system may be able to auto-configure your mouse during its installation or only enable its basic functions. Be sure to check the device’s user documentation for details.

Touchpad Cleaning

In order to improve pad performance it is necessary to keep the surface clean and free of fingerprints and marks etc.

Use a soft dry cleaning cloth to keep the pad surface clean.

Disabling the Pad

Use the Fn + F1 or Control Center button to disable the Touchpad.

Mustang W656 Notebook
Mouse Properties Control Panel

You can configure the functions from the Mouse control panel in Windows as follows.

1. Right-click the Start Menu icon.
2. Select Control Panel.
3. Click Mouse (Hardware and Sound > Devices and Printers).
4. Click the menu headings tabs to adjust your mouse preferences.

Disabling the Touchpad

If you need to disable the Touchpad for any reason (e.g. you may find that when using the computer's internal keyboard you accidentally trigger the Touchpad when resting your wrists or palms on it) you can do so by using Fn + F1 key combination.

You can disable the Touchpad by clicking the Touchpad button to turn it off.

You can set the system to automatically disable the internal Touchpad when an external USB point device (e.g. a USB mouse) is attached. Click “Leave touchpad on when a mouse is connected” to off.
Features & Components

**Touchpad Taps**

The **Touchpad Sensitivity** feature helps prevent recognizing taps on the pad by accident, by recognizing when your palm is resting on it or brushing its surface while you are typing.

Click in the check box to enable/disable the different gestures or taps on the surface of the pad to perform specific actions to manipulate documents, objects and applications.

![Pinch to zoom](image.jpg)

The **two-finger scrolling** feature works in most scrollable windows and allows you to scroll horizontally and vertically. Place two fingers, slightly separated, on the Touchpad surface and slide both fingers in the direction required (in a straight continuous motion).

The **two-finger pinch to zoom** gesture can be used to perform the same function as a scroll wheel in *Windows* applications that support CTRL + scroll wheel zoom functionality. Place two fingers on the pad (for best results use the tips of the fingers) and slide them apart to zoom in, or closer together to zoom out.
The **three-finger** and **four-finger swipes** and **taps** can be configured for a number of different functions. Select the appropriate function from the drop-down menu.

Realtek Audio Console

You can configure the audio options on your computer from the Sound control panel in Windows, or from the Realtek Audio Console Windows Start menu. Make sure you have installed the driver and checked the Microsoft Store for updates (see “Audio” on page 4 - 10 and install the Sound Blaster driver, see “Creative Sound Blaster Cinema 6 Installation” on page 6 - 45). The volume may also be adjusted by means of the volume icon in the taskbar or the audio slider in the Settings menu (see sidebar).

Chapter 3: Power Management

Overview

To conserve power, especially when using the battery, your computer power management conserves power by controlling individual components of the computer (the monitor and hard disk drive) or the whole system. This chapter covers:

- The Power Sources
- Turning On the Computer
- Power Plans
- Power-Saving States
- Configuring the Power Buttons
- Battery Information

The computer uses enhanced power saving techniques to give the operating system (OS) direct control over the power and thermal states of devices and processors. For example, this enables the OS to set devices into low-power states based on user settings and information from applications.

OS Note

Power management functions will vary slightly depending on your operating system. For more information it is best to refer to the user’s manual of your operating system.
The Power Sources
The computer can be powered by either an AC/DC adapter or a battery pack.

AC/DC Adapter
Use only the AC/DC adapter that comes with your computer. The wrong type of AC/DC adapter will damage the computer and its components.

1. **When first setting up the computer use the following procedure** (as to safeguard the computer during shipping, the battery will be locked to not power the system until first connected to the AC/DC adapter and initially set up as below):
   • Attach the AC/DC adapter cord to the DC-In jack at the rear of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter and the battery will now be unlocked.
2. Raise the lid/LCD to a comfortable viewing angle.
3. Press the power button to turn “On”.

Battery
The battery allows you to use your computer while you are on the road or when an electrical outlet is unavailable. Battery life varies depending on the applications and the configuration you're using. **To increase battery life, let the battery discharge completely before recharging** (see “Battery FAQ” on page 3 - 21).

We recommend that you do not remove the battery. For more information on the battery, please refer to “Battery Information” on page 3 - 16.

Forced Off
If the system “hangs”, and the Ctrl + Alt + Del key combination doesn’t work, press the power button for **4 seconds**, or longer, to force the system to turn itself off.
Turning On the Computer

Now you are ready to begin using your computer. To turn it on simply press the power button on the front panel.

When the computer is on, you can use the power button as a Stand by/Hibernate/Shutdown hot-key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will shut the computer down). Use Power Options (Hardware and Sound) in the Windows control panel to configure this feature.

Power Button as Stand by or Hibernate Button

You can use the OS's “Power Options” control panel to set the power button to send the system into Stand by or Hibernate mode (see your OS’s documentation, or “Configuring the Power Buttons” on page 3 - 9 for details).
Power Management

Shutting the Computer Down

Note that you should always shut your computer down by choosing the **Shut down** command as this will help prevent hard disk or system problems. Use the **Power** item in the **Start Menu** and select **Shut down**.

You can also use the **context menu** (right-click the Start Menu icon or press the Windows logo + X key combination) to **Sign out, Sleep, Hibernate, Shut down, and Restart**.

If you want to add Hibernate/Sleep to the Power Menu see “**Adding Hibernate/Sleep to the Power Menu**” on page 3 - 10.
Power Plans

The computer can be configured to conserve power by means of power plans (Control Panel > Power Options). You can use (or modify) an existing power plan, or create a new one.

The settings may be adjusted to set the display to turn off after a specified time, and to send the computer into Sleep after a period of inactivity.

Click Change plan settings and then click Change advanced power settings to access further configuration options in Advanced Settings.

Resuming Operation

See Table 3 - 1, on page 3 - 11 for information on how to resume from a power-saving state.

Password

It is recommended that you enable a password on system resume in order to protect your data.

Figure 3 - 2
Power Plan Advanced Settings
Power Management

Each *Windows power plan* will also adjust the processor performance of your machine in order to save power. This is worth bearing in mind if you are experiencing any reduced performance (especially under DC/battery power).

Choose **High performance** (you may need to click *Show additional plans* to view the High performance plan) for maximum performance when the computer is powered from an AC power source. Choose the **Power saver** (bear in mind that this scheme may slow down the overall performance of the computer in order to save power) for maximum power saving when the computer is battery (DC power) powered.

*Figure 3 - 3  Power Plans*
Power-Saving States

You can use power-saving states to stop the computer’s operation and restart where you left off. *Windows 10* uses the *Sleep, Hibernate* and *Shut Down* power-saving states.

**Sleep**

In *Sleep* all of your work, settings and preferences are saved to memory before the system sleeps. When you are not using your computer for a certain length of time, which you specify in the operating system, it will enter *Sleep* to save power.

The PC wakes from *Sleep within seconds* and will return you to where you last left off (what was on your desktop) without reopening the application(s) and file(s) you last used.

If your mobile PC in *Sleep* is running on battery power the system will use only a minimum amount of power. After an extended period the system will save all the information to the hard disk and shut the computer down before the battery becomes depleted.

To add *Sleep* to the *Power Menu* see “*Adding Hibernate/Sleep to the Power Menu*” on page 3 - 10.
Power Management

Hibernate

Hibernate uses the least amount of power of all the power-saving states and saves all of your information on a part of the hard disk before it turns the system off. If a power failure occurs the system can restore your work from the hard disk; if a power failure occurs when work is saved only to memory, then the work will be lost. Hibernate will also return you to where you last left off within seconds. You should put your mobile PC into Hibernate if you will not use the computer for a period of time, and will not have the chance to charge the battery. To add Hibernate to the Power Menu see “Adding Hibernate/Sleep to the Power Menu” on page 3 - 10.

Shut down

You should Shut down the computer if you plan to install new hardware, plan to be away from the computer for several days, or you do not need it to wake up and run a scheduled task. Returning to full operation from Shut down takes longer than from Sleep or Hibernate.
Configuring the Power Buttons

The power/sleep button (Fn + F12 key combo) and closed lid may be set to send the computer in to a power-saving state. Click **Choose what the power buttons do** on the left menu in **Power Options** to bring up the menu.

Adding Hibernate/Sleep to the Power Menu

Add Hibernate/Sleep to the Power Menu as follows.

1. Go to the Power Options (Hardware and Sound) control panel.
2. Click “Change settings that are currently unavailable”.
3. Click Choose what the power buttons do.
4. Click to put a check in the Hibernate/Sleep box under Shutdown settings.
5. Click Save Changes and close the control panel.
Resuming Operation

You can resume operation from power-saving states by pressing the power button, or in some cases pressing the sleep button (Fn + F12 key combo).

Power Button

When the computer is on, you can use the power button as a Sleep/Hibernate/Shut Down hot key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will force the computer to shut down).

Closing the Lid

If you have chosen to send the computer to Sleep when the lid is closed, raising the lid will wake the system up.
Ctrl + Alt + Delete Key Combination
You can use the CTRL + ALT + DEL key combination from almost any of the Windows 10 interfaces/Apps to bring up a full-screen displaying Lock, Switch User, Sign out, Change a password and Task Manager options. If you click the Power icon in the lower right corner of the screen a power management option menu appears to display Sleep, Shut down, and Restart.

To fully control all the power options (including Hibernate mode) go to the Power Options control panel and configure the power button, sleep button and lid to perform the function selected.
Settings Menu Power Controls

The **Settings** item in the **Start Menu** (or via the **Action Center**) gives you access to a number of power settings control panels which enable you to quickly adjust power options. Click **System** to access the menu including the power option settings.

Battery Information

Follow these simple guidelines to get the best use out of your battery.

Battery Power

Your computer’s battery power is dependent upon many factors, including the programs you are running, and peripheral devices attached. You can set actions to be taken (e.g. Shut down, Hibernate etc.), and set critical and low battery levels from power plan **Change plan settings > Change advanced power settings** (see **Figure 3 - 3 on page 3 - 6**).

Click the battery icon in the notification area to see the current battery level and charge status (you can also click **Power & sleep settings** to access the **Settings** menu to quickly adjust power settings).

**Power Slider Settings & Notes**
Conserving Battery Power

- Use a **power plan** that conserves power (e.g. **Power saver**), however note that this may have an affect on computer performance.
- Lower the brightness level of the LCD display. The system will decrease LCD brightness slightly to save power when it is not powered by the AC/DC adapter.
- Reduce the amount of time before the display is turned off.
- Close wireless, Bluetooth, modem or communication applications when they are not being used.
- Disconnect/remove any unnecessary external devices e.g. USB devices, ExpressCards etc.

**Figure 3 - 13**

Windows Mobility Center (Control Panel)
Battery Life
Battery life may be shortened through improper maintenance. To optimize the life and improve its performance, fully discharge and recharge the battery at least once every 30 days. We recommend that you do not remove the battery yourself.

New Battery
Always completely discharge, then fully charge, a new battery (see “Battery FAQ” on page 3 - 21 for instructions on how to do this).

Recharging the Battery with the AC/DC Adapter
The battery pack automatically recharges when the AC/DC adapter is attached and plugged into an electrical outlet. If the computer is powered on, and in use, it will take several hours to fully recharge the battery. When the computer is turned off but plugged into an electrical outlet, battery charge time is less. Refer to “LED Indicators” on page 1 - 8 for information on the battery charge status, and to “Battery FAQ” on page 3 - 21 for more information on how to maintain and properly recharge the battery pack.
Proper handling of the Battery Pack

- DO NOT disassemble the battery pack under any circumstances
- DO NOT expose the battery to fire or high temperatures, it may explode
- DO NOT connect the metal terminals (+, -) to each other

Caution
Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.

Damaged Battery Warning
Should you notice any physical defects (e.g. the battery is bent out of shape after being dropped), or any unusual smells emanating from the notebook battery, shut your computer down immediately and contact your distributor/supplier. If the battery has been dropped we do not recommend using it any further, as even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire. It is recommended that you replace your computer battery every two years.
Battery FAQ

How do I completely discharge the battery?
Use the computer with battery power until it shuts down due to a low battery. Don’t turn off the computer even if a message indicates the battery is critically low, just let the computer use up all of the battery power and shut down on its own.

1. Save and close all files and applications.
2. **Create a power plan** for discharging the battery and set all the options to **Never**.
3. Click **Change plan settings** (after creating it) and click **Change plan settings > Change advanced power settings**.

4. Scroll down to **Battery** and click + to expand the battery options.
5. Choose the options below (click **Yes** if a warning appears):

- Low battery level = 0%
- Critical battery level = 1%
- Low battery action = Do Nothing
- Reserve Battery Level = 0%

*Figure 3 - 15*

Advanced Settings - Battery
How do I fully charge the battery?
When charging the battery, don’t stop until the LED charging indicator light changes from orange to green.

How do I maintain the battery?
Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.
Removing the Battery

We recommend that you do not remove the battery yourself. If you do need to remove the battery for any reason (e.g. long term storage) see below.

1. Turn the computer off, and turn it over.
2. Slide the latch in the direction of the arrow.
3. Slide the latch in the direction of the arrow, and hold it in place.
4. Lift the battery out in the direction of the arrow from point 3.

Chapter 4: Drivers & Utilities

This chapter deals with installing the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems. The system takes advantage of some newer hardware components for which the latest versions of most available operating systems haven’t built in drivers and utilities. Thus, some of the system components won’t be auto-configured with an appropriate driver or utility during operating system installation. Instead, you need to manually install some system-required drivers and utilities.

What to Install

You will need to attach an external optical CD/DVD device drive to install the drivers from the Device Drivers & Utilities + User’s Manual disc. The disc contains the drivers and utilities necessary for the proper operation of the computer. on page 4 - 4 lists what you need to install and it is very important that the drivers are installed by the method outlined in this chapter, and in the order indicated. Note that the information on the following pages is for Windows 10 (64-bit only).

Module Driver Installation

The procedures for installing drivers for the Wireless LAN, Bluetooth & WLAN Combo, Intel Technology and Sound Blaster modules are provided in “Modules & Options” on page 6 - 1.
Driver Installation

1. Insert the *Device Drivers & Utilities + User’s Manual* disc into an attached DVD drive.
2. Click the message “Tap to choose what happens with this disc.”
3. Click *Run autorun.exe*.
4. Click *Install Drivers* (button), or *Option Drivers* (button) to access the *Optional* driver menu.

*Figure 4 - 1 - Drivers Installer Screen 1*
5. Check the driver installation order from, on page 4 - 4 (the drivers must be installed in this order) which is the same as that listed in the *Drivers Installer* menu below.
6. Click to select the driver you wish to install, (you should note down the drivers as you install them).
7. Follow the instructions for each individual driver installation procedure as listed on the following pages.

All drivers provided are for the Windows 10 (64-bit) operating system. Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.

*Table 4 - 1 - Driver Installation*
Manual Driver Installation
Click **Browse CD/DVD** (button) in the **Drivers Installer** application and browse to the executable file in the appropriate driver folder.

**Latest Updates**
After installing all the drivers make sure you enable Check for updates (**Settings > Update & security > Check for updates**) and go to the **Microsoft Store** and click **Downloads and updates > Get updates** to update all Apps etc. See "**Windows Update**" on page 4 - 11 for instructions.

Updating/Reinstalling Individual Drivers
If you wish to update/reinstall individual drivers it may be necessary to uninstall the original driver. To do this go to the **Control Panel** in the **Windows OS** and double-click the **Programs** icon (**Programs > Uninstall a program**). Click to select the driver (if it is not listed see below) and click **Uninstall**, and then follow the on screen prompts (it may be necessary to restart the computer). Reinstall the driver as outlined in this chapter.

If the driver is not listed in the **Programs and Features** menu:

1. Go to the **Control Panel**.
2. Double-click **Device Manager** (**Hardware and Sound > Devices and Printers > Device Manager**).
3. Double-click the **device** you wish to update/reinstall the driver for (you may need to click “+” to expand the selection).
4. Click **Driver** (tab) and click the **Update Driver** or **Uninstall** button and follow the on screen prompts.
Drivers & Utilities

User Account Control
If a User Account Control prompt appears as part of the driver installation procedure, click Continue or Allow, and follow the installation procedure as directed.

Windows Security Message
If you receive a Windows security message as part of the driver installation process. Just click “Install this driver software anyway” or “Install” to continue the installation procedure.

You will receive this message in cases where the driver has been released after the version of Windows you are currently using. All the drivers provided will have already received certification for Windows.

New Hardware Found
If you see the message “New Hardware Found” during the installation procedure (other than when outlined in the driver install procedure), click Cancel to close the window, and follow the installation procedure.

Driver Installation General Guidelines
The driver installation procedure outlined in this Chapter (and in Chapter 7 Options & Modules), are accurate at the time of going to press.

Drivers are always subject to upgrade and revision so the exact procedure for certain drivers may differ slightly. As a general guide follow the default on screen instructions for each driver (e.g. Next > Next > Finish) unless you are an advanced user. In many cases a restart is required to install the driver.

Make sure any modules (e.g. WLAN or Bluetooth) are ON (i.e. the system is not in Airplane Mode) before installing the appropriate driver.
Driver Installation Procedure

Insert the Device Drivers & Utilities + User’s Manual disc and click Install Drivers (button).

**Chipset**

*Note: During the driver installation process the screen resolution may change. Make sure you restart after the driver installation process, as instructed, in order to restore the original resolution.*

8. A list of apps being downloaded will pop-up.
9. To prioritize the Realtek audio driver you can click **Pause all** to pause the download queue.
10. Click on **Realtek Audio Console** and click on the resume icon to download the driver.
11. When installed the **Realtek Audio Console** will appear in the **Windows Start** menu.

After installing the audio driver the system will not return to the **Drivers Installer** screen. To install the optional drivers, eject the **Device Drivers & Utilities + User’s Manual** disc and then reinsert it (or double-click the disc icon in My Computer), and click **Option Drivers** (button) to access the optional driver menu.
After installing all the drivers make sure you enable **Windows Update** in order to get all the latest security updates etc. (all updates will include the latest **hotfixes** from Microsoft).

To enable **Windows Update** make sure you are connected to the internet:

1. Go to the **Control Panel**.
2. Click **Windows Update** (System and Security/Security).
3. Click **Check for updates** (button).
4. The computer will now check for updates (you need to be connected to the internet).
5. Click **Install now** (button) to begin checking for the updates.
6. Click **Install updates** (button) to install the updates.
Optional Drivers
See the pages indicated in, on page 4-4, for the driver installation procedures for any modules included in your purchase option.

Chapter 5: BIOS Utilities

Overview

This chapter gives a brief introduction to the computer’s built-in software BIOS (Basic Input/Output System).

If your computer has never been set up, or you are making important changes to the system (e.g. hard disk setup), then you should review this chapter first and note the original settings found in BIOS. Even if you are a beginner, keep a record of the settings you find and any changes you make. This information could be useful if your system ever needs servicing.

There is one general rule: Don’t make any changes unless you are sure of what you are doing. Many of the settings are required by the system, and changing them could cause it to become unstable or worse. If you have any doubts, consult your service representative.

To enter BIOS, turn on the computer and press F2 as the system “Boots up”.

Note that the BIOS screens pictured on these pages are intended for guidance in setting up your system’s BIOS. BIOS versions are subject to constant change and revision, therefore your computer's actual screens may appear slightly different from those pictured on these pages.
The Insyde BIOS Utility

Each time you turn on the computer the system takes a few seconds to conduct a including a quick test of the on-board RAM (memory).

As the boot process proceeds, the computer will tell you if there is anything wrong. If there is a problem that prevents the system from booting, it will display a system summary and prompt you to run the BIOS setup.

If there are no problems the system will load the operating system. Once that starts, you can’t get into BIOS without rebooting.

The Setup BIOS Utility tells the system how to configure itself by translating instructions from the operating system, and other software, into instructions that the computer hardware understands. manage basic features, identify installed devices and subsystems (e.g. port configuration).

---

Incorrect settings can cause your system to malfunction. To correct mistakes, return to BIOS and Load Optimized Defaults (press F9).

The menus shown in this section are for reference only. Your computer’s menus will indicate the configuration appropriate for your model and options.

When the system resumes from Hibernation the option will be available to press F2 to enter the BIOS. In this case do not make any changes to the BIOS settings as this may result in system errors.

If you wish to change the BIOS settings, restart the system and press F2 to enter the BIOS to make and save any changes required.
Updating the BIOS / CPU

If you need to update the BIOS please contact your distributor or supplier to obtain the latest version.

After using the utility to update the BIOS (or if the CPU has been changed) you will need to press F2 at Boot to enter the BIOS, and then press F9 to load the BIOS defaults, and then press F10 to save and exit the settings.

After the system restarts you should press F2 to enter the BIOS again and reset the BIOS settings to your preferences, and then save the final settings.
UEFI Boot
UEFI (Unified Extensible Firmware Interface) is an advanced firmware standard supporting fast startup.

With UEFI Boot prompts at boot to press F2 (to access the BIOS) or F7 (to access Boot options) will not appear. However you can still press F2 to enter the setup, or F7 to choose the preferred boot device, if you press the key immediately the system boots up.

To enter BIOS, turn on the computer and press F2 as the system “Boots up”.
If the computer is already on, reboot using the Ctrl + Alt + Delete combination and then hold down F2 when prompted. The BIOS main menu will appear. To see the boot options press F7 and choose your preferred boot device.
Insyde BIOS Start Screen

On accessing the BIOS you will be presented with the Start Screen with 5 menu icons, date and time information, CPU temperature information and navigation and Help icons at the bottom of the screen.

You can use the Touchpad, an attached mouse, or the cursor/arrow keys to navigate the menus and press Enter to access the submenu.

- **Boot Manager**: Press *Enter* here or click *Boot Manager* to access the Boot Manager utility.

- **Boot From File**: Press *Enter* here or click *Boot From File* to select a file or device to Boot from.

- **Administer Secure Boot**: Press *Enter* here or click *Administer Secure Boot* to proceed with a Secure Boot process. This will take you to the Secure Boot screen which allows you to manage secure boot settings.

- **Setup Utility**: Press *Enter* here or click *Setup Utility* to access the BIOS settings in the Setup Utility.

**Note to return to the Start Screen from any of the submenus press the *Esc* key.**
Boot Manager

When you turn the computer on it will look for an operating system from the devices listed in this menu, and in this priority order. If it cannot find the operating system on that device, it will try to load it from the next device in the order specified in the Boot Option Menu.

Press Enter to access the menu, use the arrow keys to move up and down the menu, and press Enter to select a device.

Figure 5 - 2

Note that the BIOS screens pictured on these pages are intended for guidance in setting up your system’s BIOS. BIOS versions are subject to constant change and revision, therefore your computer’s actual screens may appear slightly different from those pictured on these pages.
**Boot From File / File Explorer**

If you need to boot from a file (e.g. on a USB flash drive) then access this menu and use the cursor keys to select the device or file (you can press *Enter* to explore for a file on an attached device).
Administer Secure Boot

Secure Boot prevents unauthorized operating systems and software from loading during the startup process. You can select a trusted UEFI file to execute the BIOS, make sure that you Enforce Secure Boot, Erase all Secure Boot Settings or Restore the Factory Settings.

Figure 5 - 4
Administer Secure Boot
You can also make custom changes to the Key Management database if required by accessing the advanced secure boot options for Platform Key (PK Options), Key Exchange Key (KEK Options), Allowed Signatures Database (DB Options) and Forbidden Signatures Database (DBX Options).
Setup Utility - Main Menu

SATA Port # (Main Menu)
Pressing Enter opens the sub-menu to show the configuration of an HDD on the computer’s SATA Ports.
OffBoard SATA/NVme Controller Configuration (Main Menu)
Pressing Enter opens the sub-menu to show the configuration of any devices on the off board SATA/NVme Controller if applicable.

System Time & System Date (Main Menu)
The hour setting uses the 24-hour system (i.e., 00 = midnight; 13 = 1 pm). If you can change the date and time settings in your operating system, you will also change these settings. Some applications may also alter data files to reflect these changes.

System/Extended Memory: (Main Menu)
This item contains information on the system memory, and is not user configurable. The system will auto detect the amount of memory installed.

MB Series / BIOS Revision / KBC/EC firmware Revision / MAC Address
This item contains information on the BIOS version, network adapter address etc., and is not user configurable.

Figure 5 - 7
Main (Lower)
**Advanced Chipset Control (Advanced Menu)**

The sub-menu here allows you to enable/disable **GPU Performance Scaling**, **Flexicharger**, **Software Guard Extensions**, **VT-d** and **UEFI OS Fast Boot**.
GPU Performance Scaling (Advanced Menu > Advanced Chipset Control)
You can enable/disable NVIDIA GPU Performance scaling from this menu. The NVIDIA Card does the scaling if this option is on, and has less latency than the Intel GPU. This can be useful if you play games etc.
FlexiCharger Enable (Advanced Menu > Advanced Chipset Control)
The sub-menu here allows you to enable/disable the **FlexiCharger**. The FlexiCharger may be set to automatically start charging your battery when the battery reaches a certain capacity level (e.g. you could start the battery charge level at 40%).

You can then set the level to stop charging (e.g. 100%), and of course this stop charge level must be higher than the start charge level.

See the sidebar warning for information on running the FlexiCharger for an extended period as this is not recommended.

![Figure 5 - 10](image)

**FlexiCharger Warning**

If you leave the FlexiCharger continuously "Enabled" for a period of three months or more, the battery meter’s reading accuracy will deteriorate.

To reset this, set the FlexiCharger to "Disabled", and then allow the battery to completely discharge (see “Battery FAQ” on page 3 - 21) before enabling the function again.
BIOS Utilities

**SW Guard Extensions (SGX) - (Advanced Menu > Advanced Chipset Control)**

Intel provides SGX, which is a set of instructions allowing user-level code a degree of security, and privacy, from the operating system. Make sure that SW Guard Extensions is **Enabled** here, and then install the driver (see “Intel® Software Guard Extensions Driver” on page 6 - 27) to support this.

**VT-d (Advanced Menu > Advanced Chipset Control)**

Enable/disable Intel® Virtualization Technology for Directed I/O (VT-d) from this menu. This extends Intel's Virtualization Technology (VT) by providing hardware assists for a virtualization solution.

**UEFI OS Fast Boot (Advanced Menu > Advanced Chipset Control)**

Use this menu item to enable/disable the Fast Boot option, which when enabled, helps reduce the time it takes to boot the computer.

**SATA Mode (Advanced Menu)**

The SATA (Serial ATA) control is configured to operate in AHCI (Advanced Host Controller Interface) mode or in Intel RST Premium With Intel Optane System Acceleration (for either RAID or Intel® Optane™) mode. **Note that your system can be set up as a RAID OR to support Intel® Optane™, it cannot be set to support both systems.**
The **SATA Mode** should be set **BEFORE installing an operating system**, and after you have backed up all necessary files and data (see sidebar). See “**SATA Mode Setup (Optane™, RAID or AHCI)**” on page 6 - 2 for details. Make sure you install the **IRST driver** if you have set the SATA Mode to **Intel RST Premium With Intel Optane System Acceleration (for Optane or RAID)**, or to **AHCI** (see “**IRST Driver Installation**” on page 6 - 29).

**Intel® Optane™ Supported by IRST Driver**

You do not have to set the SATA Mode to Intel RST Premium With Intel Optane System Acceleration if you install the Intel IRST driver, and setup the SATA controller to Premium mode by selecting “**Switch System SATA controller to Intel® RST Premium mode (Recommended)**” as part of the driver installation process (see “**IRST Driver Installation**” on page 6 - 29). DO NOT uninstall the driver and application after selecting Intel® RST Premium mode.

If you wish to change your SATA mode to/from AHCI/Intel RST (Optane)/RAID mode note that doing so may prevent your operating system from booting, and may require a reinstall of the OS. If you do wish to change the SATA mode then backup any necessary data on your hard disk(s) as you will need wipe the disks clean in order to prevent system problems.
Intel Optane Options

Intel® Optane™ is a combination of a compatible memory device and Intel® Optane™ Memory and Storage Management app. This combination is designed to speed up your system performance by caching boot data, executables, frequently accessed data and system page files to an non volatile, low latency Intel® Optane™ SSD.

Clearing Intel Optane

If you need to clear Intel Optane Memory data then follow the process below, however note you will need to back up your system first as the procedure will result in the system being required to be reinstalled and data and files will be lost in the process.

1. Go to the BIOS and select Bios setup > Advanced > Intel Rapid Storage Technology and select Intel Optane.
2. Select Disable.
3. Select Yes when prompted “Are you sue you want to disable?”.
4. Select Disable and the system will clear the data.
5. The system will then return to the Intel Rapid Storage Technology menu.
Battery Low Alarm Beep (Advanced Menu)
Use this menu item to enable/disable the battery low alarm beep.
Setup Utility - Security Menu

Set Supervisor Password (Security Menu)
You can set a password for access to the BIOS. This will not affect access to the computer OS (only the BIOS). An on-screen keyboard is available to assist with keyboard input.
Note: To clear existing supervisor passwords press Enter and type the existing password, then press Enter for the new password (without typing any password entry) and Enter again to confirm the password clearance. To clear a user password just click on Clear User Password.

Set User Password (Security Menu)
You can set a password for user mode access to the BIOS. This will not affect access to the computer OS, (only the Setup utility) unless you choose to set a Password on Boot (see below). Some menu items in the BIOS cannot be modified in user mode.

Note: You can only set the user password after you have set the supervisor password.

Power on Password: (Security Menu)
Specify whether or not a password should be entered to boot the computer (you may only set a Power on Password if a supervisor password is enabled). If “Enabled” is selected, only users who enter a correct password can boot the system (see the warning in the sidebar). The default setting is “Disabled”.

Password Warning
If you set a boot password (Password on boot is “Enabled”), NEVER forget your password. The consequences of this could be serious. If you cannot remember your boot password you must contact your vendor and you may lose all of the information on your hard disk.
TPM Configuration (Security Menu)

This sub-menu will allow you to enable/disable Trusted Platform Module (TPM) support, and to configure the TPM State. Select TPM Configuration and press Enter to access the sub-menu. Press Enter to access the Security Device Support menu and select Enable to support TPM. To reset the TPM select Clear TPM to clear existing TPM information (see “Trusted Platform Module” on page 6 - 59).
**EFI (Boot Menu)**
Press Enter to Enable/Disable any available device from which to boot under EFI.
UEFI Setting (Boot Menu)
The Unified Extensible Firmware Interface (UEFI) specification provides a clean interface between operating systems and platform firmware at boot time. In contrast to BIOS, UEFI defines a set of standard boot and runtime services. The Network Stack item can be enabled/disabled as an option under UEFI Setting and PXE Boot capability can be enabled/disabled and configured here.

Figure 5 - 15

Setup Utility - Exit Menu

Click *Exit Saving Changes* (or press F10) to save all changes made and exit the BIOS. Choosing *Exit Discarding Changes* will wipe out any changes you have made to the *Setup* and exit the BIOS. You can also choose to *Load Optimal Defaults* (or press F9) to return the *BIOS* to its original state, and erase any previous changes you have made in a previous session. Select *Discard Changes* to cancel any changes made in the current session.
Chapter 6: Modules & Options

Overview

This chapter contains information on the following modules, which may come with your computer, depending on the configuration purchased. If you are unsure please contact your service representative.

- SATA Mode Setup (Optane™, RAID or AHCI)
- Wireless LAN Module
- Bluetooth & WLAN Combo Module
- Intel® Software Guard Extensions Driver
- Intel® Rapid Storage Technology
- Sound Blaster Audio
- Webcam
- Trusted Platform Module

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the WLAN & Bluetooth module(s) are OFF (or the system is in Airplane Mode) if you are using the computer aboard aircraft (see Table 1 - 4, on page 1 - 12).
SATA Mode Setup (Optane™, RAID or AHCI)

Note that your system can be set up as a RAID OR to support Intel® Optane™, it cannot be set to support both systems.

AHCI Mode
Advanced Host Controller Interface (AHCI) is an interface specification that allows the storage driver to enable advanced serial ATA features such as Native Command Queuing (for maximum hard disk efficiency and performance). Make sure you install the Intel® Rapid Storage Technology driver and Intel® Optane™ Memory and Storage Management app to support your HDDs/SSDs in AHCI mode (see “Intel® Rapid Storage Technology” on page 6 - 28).

Intel® Optane™
Intel® Optane™ is a combination of a compatible memory device and Intel® Optane™ Memory and Storage Management. This combination is designed to speed up your system performance by caching boot data, executables, frequently accessed data and system page files to an non volatile, low latency Intel® Optane™ SSD. Contact your distributor or supplier to see if your system supports this technology.

RAID
To configure your RAID (Redundant Array of Independent Disks) system in Striping (RAID 0) or Mirroring (RAID 1) modes (see Table 6 - 1, on page 6 - 4) you will require at least two identical (see sidebar) PCIe SSDs.
Intel® Optane™ Memory and Storage Management

Make sure you install the Intel® Optane™ Memory and Storage Management application if you have set up your SSDs in AHCI, RAID, OR Optane™ mode (see “Intel® Rapid Storage Technology” on page 6 - 28).

After setting the SATA mode to Intel® Optane™ and installing the Intel® Rapid Storage Technology driver, DO NOT uninstall the Intel® Rapid Storage Technology driver.

See “RAID Setup” on page 6 - 5 or “Intel® Optane™ Setup Procedure” on page 6 - 11 for further details.

Note that your system can be set up as a RAID OR to support Intel® Optane™, it cannot be set to support both systems.

SATA Mode Selection

The SATA mode selection should be made before installing your operating system.
DO NOT change your selected SATA mode unless you intend to reinstall your operating system. Make sure you have backed up all your data before doing so.

Solid State Drives

All solid state drives in a RAID should be identical (the same size and brand) in order to prevent unexpected system behavior.
RAID Setup

To configure your RAID (Redundant Array of Independent Disks) system in Stripping (RAID 0), Mirroring (RAID 1) or Recovery modes (see Table 6 - 1, on page 6 - 4) you will require two identical PCIe solid state drives.

You need to setup a RAID before installing your Windows 10 operating system, and you will need to prepare the following in order to do so.

==========================================================
• The Microsoft Windows 10 OS DVD.
• A connected external DVD drive.
• Two Identical solid state drives.
• The Device Drivers & Utilities + User’s Manual disc.

(see over)
1. Start up your notebook computer and press <F2> to enter the BIOS and go to the Setup Utility.
2. Select the Advanced menu.
3. Select SATA Mode (see page 5 - 16), press <Enter> and select “Intel RST Premium With Intel Optane Acceleration” and select <OK>.
4. Press <F10> to “Save and Exit” and select <Yes>.
5. As the computer restarts press <F2> to enter the BIOS again and go to the Setup Utility.
6. Go to Intel(R) Rapid Storage Technology (Advanced menu) and select “Create RAID Volume”.

Figure 6 - 1
Create RAID Volume
7. You can now setup your RAID volume using the installed SSDs.
8. Select “Name” and type a name of your choice for your RAID volume and select <Yes>.
9. Select RAID Level and choose the RAID Level required (see Table 6 - 1, on page 6 - 4 for details) and press <Enter>.
   - RAID0 (Stripe)
   - RAID1 (Mirror)
   - Recovery
10. Go to any of the disks listed under “Select Disks:” and select a disk name.
11. Click on X to select the disk required.

![Select Disks](image)

Figure 6 - 2
Select Disks
12. You should select two identical SSDs to form your RAID volume.
13. If you have selected **RAID0 (Stripe)** then you can adjust the “**Strip Size**” to (you can use the cursor to move up and down the menu selection) your requirements (*it is recommended that you set the “Strip Size” to 128KB*).
14. If you have selected **Recovery** then you will need to set a **Master Disk** and **Recovery Disk**.
15. Select **Create Volume** (make sure you have selected your disks).
16. The system will list your RAID volume.
17. Press <F10> to “Save and Exit” and select <Yes>, however note below.

- Make sure the Windows 10 OS DVD is in the attached DVD drive, as the computer starts up it will automatically boot from the Windows 10 OS DVD (you will be prompted to press a key to boot from the DVD).

18. Press <F2> as the computer starts up to select the drive containing the Windows 10 OS DVD as the boot device in Boot Manager.
19. Press a key at system startup to begin installing Windows from your Microsoft Windows 10 disc.
20. Click Next > Install Now to continue installing the operating system as normal (see your Windows documentation if you need help on installing the Windows OS).
21. Follow the on-screen instructions to install the Windows 10 operating system.
22. Install the Windows drivers from the Device Drivers & Utilities + User’s Manual disc as per Table 4 - 1, on page 4 - 4 (make sure you install the Intel Rapid Storage Technology driver - see overleaf).
23. Run the Intel® Optane™ Memory and Storage Management application to manage your RAID volume as instructed in “IRST Driver Installation” on page 6 - 29.
Deleting a RAID

If you wish to delete an existing RAID then follow the procedure below to do so. However, backup up any necessary files and data before deleting a RAID, as doing so will result in the loss of all data on the RAID volumes.

1. Start-up your notebook computer and press <F2> to enter the BIOS.
2. Select Intel(R) Rapid Storage Technology (in the Advanced menu).
3. Select the RAID (listed under RAID Volumes:).
4. Select Delete.
5. Select “Yes” (note that all the data on the volumes will be lost).
**Intel® Optane™ Setup Procedure**

After initial setup make sure you install the Intel Rapid Storage Technology driver/Intel® Optane™ Memory and Storage Management application.

You need to setup Intel® Optane™ before installing your Windows 10 operating system, and you will need to prepare the following in order to do so.

- The Microsoft Windows 10 OS DVD.
- An Intel® Optane™ SSD installed in your system.
- The Device Drivers & Utilities + User’s Manual disc.

**Intel® Optane™ Supported by IRST Driver**

You do not have to set the SATA Mode to Intel RST Premium With Intel Optane System Acceleration if you install the Intel IRST driver, and setup the SATA controller to Premium mode by selecting “Switch System SATA controller to Intel® RST Premium mode (Recommended)” as part of the driver installation process (see “IRST Driver Installation” on page 6 - 29). DO NOT uninstall the driver and application after selecting Intel® RST Premium mode.

**Optane SSD Module Removal**

If you need to remove an installed Optane SSD module for any reason, you must disable Intel Optane before doing so. Failure to disable Optane before removing an Optane SSD module will result in the system being unable to start up.
If you prefer to setup your Optane drive without doing so in the BIOS then you can skip the following steps 1 to 7, and start with the process of installing Windows (DO NOT forget to leave 5MB of unallocated space on the drive for acceleration as indicated in step 14). Make sure you install the IRST driver.

1. Start-up your notebook computer and press <F2> to enter the BIOS.
2. Select Setup Utility and go to the Advanced menu.
3. Select SATA Mode (see page 5 - 16), press <Enter> and select “Intel RST Premium With Intel Optane Acceleration.”.
4. Select “Save and Exit”.
5. As the computer restarts press <F2> to enter the BIOS again.
6. Go to the Setup Utility, and go to the Advanced menu and you will now see the Intel(R) Rapid Storage Technology item. You can press <Enter> to check the information. (Note this item only appears after you have restarted and accessed the BIOS again after having set SATA Mode to Intel RST Premium With Intel Optane Acceleration)

If you need to remove an installed Optane SSD module for any reason, you must disable Intel Optane before doing so. Failure to disable Optane before removing an Optane SSD module will result in the system being unable to start up.
7. Select “Save and Exit”, and make sure the Windows 10 OS DVD is in the DVD drive, or on a USB flash drive, as the computer starts up it will automatically boot from the Windows 10 DVD or flash drive.
8. Press <F2> as the computer starts up and select Boot Manager.
9. Click to select the drive containing the Windows 10 OS.
10. Press a key at system startup to begin installing Windows from your Microsoft Windows 10 disc.
11. Click Next > Install Now to continue installing the operating system as normal (see your Windows documentation if you need help on installing the Windows OS).
12. Select Custom: Install Windows only (advanced).
13. It is recommended that you select and then delete existing partitions.
14. Click “New” to create a partition for Windows on your system drive (leave 5MB of unallocated space on the drive for acceleration as indicated below), and you can format a disk partition for you Optane drive now, or in the Disk Management control panel in Windows (Administrative Tools) after system installation is complete.
15. Bear in mind the following when creating partitions for your system drive and your Optane drive:
   • The drive partition should be set to GPT (MBR partitions are not supported).
   • The drive type should be basic, Dynamic drives are not supported.
   • It is very important to make sure that when you create any partition, to leave at least a minimum of unallocated space of 5MB (see sidebar). This space is required for any drive that is being accelerated (System or Data Drive).
16. Follow the on-screen instructions to install the Windows 10 operating system.
17. Install the Windows drivers from the Device Drivers & Utilities + User’s Manual disc as per Table 4 - 1, on page 4 - 4 (make sure you install the Intel Rapid Storage Technology driver - see overleaf).
18. Run the Intel® Rapid Storage Technology/Intel® Optane™ Memory and Storage Management application to manage your Intel® Optane™ system as instructed in “Intel® Rapid Storage Technology” on page 6 - 28.
19. After installing the Intel® Rapid Storage Technology/Intel® Optane™ Memory and Storage Management application you can access Device Manager (right-click the Start menu and select Device Manager).
20. Click **Disk drives** to check the Optane drive.

![Device Manager](image)

21. If you need to partition a drive for Optane go to the **Control Panel** in Windows and click **System and Security**, and then click **Create and format hard disk partitions (Administrative Tools)**.

22. Bear in mind the bulleted point information on the previous page when creating the partition (you need need to initialize the drive if necessary).
Wireless LAN Module

If your purchase option includes a Combination Wireless LAN & Bluetooth module then install the driver as instructed overleaf.

Make sure that the module is on (i.e. the system is not in Airplane Mode) before installing the driver, and that you install the drivers in the order indicated in Table 4 - 1, on page 4 - 4.

Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.
Intel® WLAN Driver Installation

1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 1.Install WLAN Driver > Yes.
4. Click Next.
5. Click in the check box to agree to the End User License Agreement and click Install.
6. Click Finish.
7. The operating system is the default setting for Wireless LAN control in Windows (see page 6 - 18).

Uninstalling The WLAN Driver

Note that if you need to uninstall the WLAN driver, and it does not appear in the Programs and Features control panel, you will need to do so from the Device Manager.

To uninstall the driver from Device Manager, right-click the Start Menu icon in the taskbar and select Device Manager. Right-click the WLAN device and then select “Uninstall device” (make sure to tick the box “Delete the driver software for this device”) to start the process.

After the driver is uninstalled click the icon at the top of Device Manager to “Scan for hardware changes”.

Mustang W656 Notebook
WLAN Configuration in Windows 10
You can configure a wireless connection using one of the following options, however make sure the Wireless LAN module is turned on (and not in Airplane Mode) before configuration begins.

1. Click the Wireless icon in the notification area of the taskbar.
2. Make sure that Airplane mode is off (the Airplane mode icon should be gray).
3. A list of available access points will appear.
4. Double-click an access point to connect to it (or click it and click Connect).

Connect Automatically
It is recommended that you check the box to Connect automatically.
This will cause the system to check for the access point upon startup, and resuming from a power-saving state, and will remove any necessity to keep connecting manually.
5. Enter a network security key (password) if required, and click Next.
6. You can choose to share or connect to devices or not.
7. When you are connected to the network access point it will display Connected status.
8. Select any connected network and click Disconnect to disconnect from a connected access point.

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited.

Make sure the module is either OFF or in Airplane mode if you are using the computer aboard aircraft.
9. You can click the **Airplane Mode** button to turn the mode On or Off.
10. You need to either use **Airplane Mode**, or to turn the WLAN module off aboard aircraft.
11. If you click on **Network Settings** to bring up **Network & Internet** for a more comprehensive list of network and internet settings including **Wi-Fi** (can be turned on/off), **Airplane mode** (Airplane mode and Wireless devices can be turned on/off) **VPN**, **Dial-up**, **Ethernet** and **Proxy**.

Bluetooth & WLAN Combo Module

If you have included a Wireless LAN & Bluetooth Combo module, make sure the system is not in Airplane Mode before installing the drivers.

Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 4.

You will need to install both the WLAN and Bluetooth drivers for the combo modules. The Bluetooth drivers for both modules are installed as instructed overleaf.

Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.
Intel Bluetooth Combo Driver Installation
1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 2.Install Combo BT Driver > Yes.
4. Click Next.
5. Click in the check box to accept the license and click Next.
6. Select the setup type (Typical is recommended) and click Install.
7. Click Finish.
8. See “Bluetooth Configuration in Windows” on page 6 - 23 for configuration instructions.
Bluetooth Configuration in Windows

1. Go to the **Settings** control panel and click **Devices** (or click the Bluetooth icon in the taskbar and click **Add a Bluetooth Device**).
2. Click **Bluetooth & other devices** and make sure Bluetooth is **On**.
3. Click **Add Bluetooth or other device > Bluetooth (Add a device)** and a list of discovered devices will appear.
4. Double-click the device you want to pair with the computer and click **Connect**, if the PIN matches that on the device to which you wish to connect (you may need to click **paid** on the device).

1. Go to the **Settings** control panel and click **Devices** (or click the Bluetooth icon in the taskbar and click **Open Settings**).
2. Click **Bluetooth & other devices** and click **More Bluetooth options**.
3. In **Bluetooth Settings** make sure that **Allow Bluetooth devices to find this PC** check box (Discovery) has a check inside it.
4. Make sure that the **Alert me when a new Bluetooth device wants to connect** check box (Notifications) has a check inside it, if you want to be notified when a Bluetooth device wants to connect.
Intel® Software Guard Extensions Driver

Install the Intel® Software Guard Extensions Driver which provides a set of instructions allowing user-level code a degree of security, and privacy, from the operating system. Make sure that SW Guard Extensions is Enabled in the BIOS before installing the driver (see “SW Guard Extensions (SGX) - (Advanced Menu > Advanced Chipset Control)” on page 5 - 16).

Intel SGX Driver Installation
1. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 3.Install SGX Driver > Yes.
4. A window will pop-up as the driver completes installation.
Intel® Rapid Storage Technology

The Intel® Rapid Storage Technology driver supports your AHCI mode SATA drive, or your Intel® Optane™ system. Install the Intel Rapid Storage Technology driver (after installing all necessary drivers in the correct order) to install the Intel® Optane™ Memory and Storage Management app to support your Optane system or SATA drive if set up in AHCI or Intel RST Premium With Intel Optane System Acceleration (supporting RAID) mode in the BIOS (see “SATA Mode (Advanced Menu)” on page 5 - 16). See the driver installation procedure overleaf.

Note that you can set the system to Intel® RST Premium mode to support your Intel® Optane™ system even if not enabled in the BIOS by selecting “Switch System SATA controller to Intel® RST Premium mode (Recommended)” as part of the installation process.

Note: This option will only be available if you have NOT set the SATA Mode in the BIOS to Intel RST Premium With Intel Optane System Acceleration.
IRST Driver Installation
1. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 4.Install IRST Driver > Yes.
4. Click Next.
5. Click in the check box to accept the license and click Next.
6. Click Next (make sure you select AHCI mode if SATA mode is set to AHCI in the BIOS).
7. Next > Next.
8. Click Finish to restart the computer.
9. Run the Intel® Optane™ Memory and Storage Management application app from the Apps screen.

Driver Uninstall Warning
After setting the SATA mode to Intel® Optane™ and installing the IRST driver and Intel® Optane™ Memory and Storage Management application, DO NOT uninstall the driver and application.

IRST Driver Installation
If you have an Optane SSD installed, and have NOT set the BIOS to Intel RST Premium With Intel Optane System Acceleration, at this point you can setup the SATA controller to Premium mode to support your Optane SSD.

To set the controller to Premium select “Switch System SATA controller to Intel® RST Premium mode (Recommended).”

Note this screen will only appear if you have not set the SATA Mode in the BIOS to support Optane.
Intel® Optane™ Memory & Storage Management

There are five areas on the left panel of the application and you can click on **Intel® Optane™ Memory** to manage system acceleration with the Optane memory system. Select the Optane memory module, and then click **Enable Intel® Optane™ Memory** to start the process.
**Enabling Intel® Optane™**

1. Run the Intel® Optane™ Memory & Storage Management application.
2. Click **Enable Intel® Optane™ Memory**.

3. A warning will pop up to notify you that the Optane Memory Module will be erased, and if this is OK then click **Enable**.

Intel® Optane™ Memory & Storage Management for RAID Systems

The Intel® Optane™ Memory & Storage Management application also displays status information on your RAID configuration. Run the Intel® Optane™ Memory & Storage Management from the Start menu in Windows.

When the application is launched the system will open the Manage window where you can view the general health of the storage system. Various volume creation and management options are available depending on the system’s status.

**Intel® Optane™ Memory & Storage Management Verifying RAID Volume**

To keep the RAID system data healthy and to repair data inconsistencies on the volume you should verify the volume regularly.

1. Run the **Intel® Optane™ Memory & Storage Management** application.
2. Click **Manage** from the menu on the left.
3. Click to select the **RAID** icon.
4. Click **Verify volume** (in some cases you may be required to initialize a volume before verification).

Link Power Management

Enabled

Link Power Management helps the SATA device save power during idle time when there is no I/O activity or when devices are absent or unused.
Intel® Optane™ Memory & Storage Management Settings

Enable **Automatic rebuild on hot plug** to automatically start rebuilding any degraded volume by simply hot plugging a compatible disk into the same location as any failed or missing drive. Do bear in mind the warranty terms as outlined in the sidebar, and you should contact your distributor or supplier for help in the case of degraded volumes or drives.

**Notifications settings**

Current Windows notifications settings status: **Enabled**

Disabling toast notifications for Intel® Optane™ Memory and Storage Management will prevent display of all notifications for this application.

**Automatic rebuild on hot plug**

**Enabled**

Automatic rebuild on hot plug support allows you to automatically start the rebuild process of a degraded volume by hot-plugging a compatible disk in the same location as a failed or missing array disk.

**WARNING:** Any existing data on the hot plug disk will be permanently deleted as soon as the migration process starts. Back up data before hot-plugging the disk.
**Intel® Optane™ Memory & Storage Delete and Create Volumes**

You can use the application to delete and create volumes, however be sure to back up any files and data before deleting any volumes.

1. Run the **Intel® Optane™ Memory & Storage Management** application.
2. Click **Manage** from the menu on the left.
3. Click to select the **RAID** icon.
4. Click **Delete volume**.
5. Click **Delete**.

Sound Blaster Audio

Install the Sound Blaster Cinema 6 application is a suite of audio technologies which allow you to configure the audio settings to your requirements for the best performance in games, music and movies.

Creative Sound Blaster Cinema 6 Installation

1. Before installing the driver make sure you have a working internet connection.
2. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
3. Click Install Drivers (button).
4. Click 12. Install Creative Driver > Yes.
5. Click OK.
6. Click the button to accept the license and then click Next.
7. Click Install > Finish.
8. Click OK and the system will automatically restart to complete the driver installation process.
9. Sound Blaster Cinema 6 app will download but you will need to have a working internet connection.
10. Click the Start menu in Windows to access the Microsoft Store app tile under Explore.
11. Click the Sign in icon and select Downloads and updates.
12. Click **Check for Updates**.
13. A list of apps being downloaded will pop-up.
14. To prioritize the **Sound Blaster Cinema 6** driver you can click **Pause all** to pause the download queue.
15. Click on Sound Blaster Cinema 6 and click on the resume icon  to download the driver.
16. When just installed the **Sound Blaster Cinema 6** will appear in the **Windows Start** menu.

Sound Blaster Cinema 6

The Sound Experience screen contains a number of preset audio configurations for your use. You can turn on/off the Sound Experience, the Equalizer and SBX Pro Studio by clicking the button alongside each title.

You can save different presets for Gaming, Movie, Music and Streaming. Click the output icon at the bottom left of the screen to select Headphones or Speakers. It is recommended you click Sign In and create a Creative account.

Figure 6 - 36
Sound Blaster Cinema 6 (Sound Experience)
The **SBX Pro Studio** offers a suite of playback technologies to enhance sound. Each playback technology has an **On/Off** check box to allow you to enable/disable it, and feature a slider to adjust the levels.

- **Surround**: Provides virtual sound channels to control the level of immersion.
- **Crystalizer**: Enriches audio to make it sound livelier.
- **Bass**: Enhances the bass level of the sound system.
- **Dialog Plus**: Optimizes dialogue levels for music and movies etc.
- **Smart Volume**: Minimizes sudden volume changes to avoid the need for constant adjustment (you can adjust the **Normal** setting level using the slider).
You can adjust the **Bass** and **Treble** levels for the **Equalizer**, and a series of presets are available from the drop-down menu. Click **Edit** and then click the plus (+) symbol to customize the settings (click on the dotted symbol and select **Revert** to return to the default settings).
**Playback** can be used to **Test** the configuration of the headphones and speakers (click *Apply processing effects to HDMI output* to configure settings for any HDMI connected devices).

Webcam

When the camera application is run the LED indicator to the left of the camera will be illuminated (see Figure 1 - 2 on page 1 - 6/ Figure 1 - 3 on page 1 - 7). Note that you need to use the Camera app in Windows to take pictures and capture video. Use the Fn + F10 key combination (see “Function/Hot Key Indicators” on page 1 - 12) to toggle power to the PC Camera module.

Note that you need to use the Camera app in Windows to take pictures and capture video.
Camera App

1. Make sure the camera is turned on by using the **Fn + F10** key combination (or **Control Center button**).
2. Run the Camera app from the Start menu by clicking on the **Camera** app icon (you can type “camera” into the search box to find the Camera app).
3. The interface displays two buttons on the right of the screen; one for photo and one for video.
4. Simply click on the appropriate button (or arrow) to switch to either photo or video modes.
5. You can use the buttons on the left of the screen to access the **Settings**, **HDR/Brightness** and **Photo Timer**.

*Figure 6-41 Camera App Mode Icons*

*Figure 6-42 Camera Menu Buttons*

**Auto or Pro Modes**

The menu buttons displayed on the left side of the screen will depend on the mode chosen in **Settings**. **Pro** mode will display the **timer and brightness** buttons, and with **Pro Mode** disabled (**Auto mode**) the **timer and HDR** buttons will be displayed.
6. Click **Settings** to access the camera settings menu to select/deselect **Pro mode**, make adjustments for **Framing grid**, **Photo Quality**, **Time lapse**, **Video Quality** and **Flicker reduction**.

The **Photo Timer** can be set to take Photos after 2, 5 or 10 seconds.

You can use a **Framing grid** to help you line up pictures.

The **Photo Quality** can be changed to that which the system supports.

**Time lapse** can be set to keep taking photos until the camera button is pressed again.

The **Video Quality** resolution and frame rate can be set to any supported by the system. Note that capturing high resolution video files requires a substantial amount of disk space for each file. After recording video, check the video file size (right-click the file and select Properties) and the remaining free space on your hard disk (go to File Explorer, right-click the hard disk, and select Properties). If necessary you can remove the recorded video file to a removable medium e.g. a USB Flash drive.

If you need to reduce any screen flicker, change the settings in **Flicker reduction** to either e.g. 50Hz or 60Hz.
Modules & Options

7. With the Pro mode selected (in Settings) you can access the Brightness button to adjust the brightness.

8. In Auto mode you can toggle HDR on or off.

Trusted Platform Module

(Optional)

The TPM security chip allows you to create and manage digital certificates for user and platform authentication. This type of security is usually administered within large enterprises and organizations, and therefore requires implementation by a system administrator before users can access security features.

Make sure you have administrator’s rights to your computer, and have a Windows password enabled for full security protection. In addition make sure you prepare a removable media (e.g. a USB flash drive) to store passwords etc. before beginning the TPM initialization process.

Before setting up the TPM functions you must enable and initialize the security platform.
Enabling & Activating TPM

1. Restart the computer.
2. Enter the **BIOS** pressing **F2** during the POST/startup.
3. Click to enter the **Setup Utility** and select the **Security** menu.
4. Click **TPM Configuration** and select **Enable** for **Security Device Support**.
5. You will then need to save the changes and restart the computer.

**Clearing TPM Information**

You can click **Clear TPM**, which will toggle the setting between **Enabled/Disabled**. If set to **Enabled** this will clear existing TPM information in order to reset the TPM.

*Figure 6 - 48*

Security - Trusted Computing
TPM Management in Windows
You can manage your TPM settings from within Windows:

1. Go to the Control Panel.
2. Click BitLocker Drive Encryption (System and Security).
3. Click TPM Administration.
4. The TPM Management window allows you to configure the TPM within Windows. As TPM is usually administered within large enterprises and organizations, your system administrator will need to assist you in managing the information here.

Figure 6-50
Trusted Platform Module (TPM) Management on Local Computer Administration
TPM Actions

1. Click **Prepare the TPM** and follow the instructions in the Wizard to prepare the TPM (this will probably require a restart of the computer and confirmation of the setting changes after restart by pressing the appropriate F key).
2. After the restart the TPM will be prepared and you can then use the **Actions** menu to **Turn TPM off**, **Change Owner Password**, **Clear TPM** or **Reset TPM Lockout**.
3. A wizard will help take you through any setup steps.

![TPM Actions Menu](image)
BitLocker
BitLocker Drive Encryption can be used in conjunction with the TPM to encrypt data on the disk. Access the Microsoft **BitLocker Drive Encryption** control panel applet from the *Windows* control panel (*System and Security*).

1. Click **Turn on Bit Locker**.
2. Follow the on-screen instructions to setup BitLocker, and make sure you have a removable media (e.g. a USB flash drive) to store saved recovery keys etc.

Chapter 7: Troubleshooting

Overview

Should you have any problems with your computer, before consulting your service representative, you may want to try to solve the problem yourself. This chapter lists some common problems and their possible solutions. This can’t anticipate every problem, but you should check here before you panic. If you don’t find the answer in these pages, make sure you have followed the instructions carefully and observed the safety precautions in the preface. If all else fails, talk to your service representative. You should also make a record of what happened and what remedies you tried.

Of course, if something goes wrong, it will happen at the most inconvenient time possible, so you should preview this section just in case. If, after you’ve tried everything, and the system still won’t cooperate, try turning it off for a few minutes and then rebooting. You will lose any unsaved data, but it may start working again. Then call your service representative.
Basic Hints and Tips

Many of the following may seem obvious but they are often the solution to a problem when your computer appears not to be working.

- **Power** - Is the computer actually plugged into a working electrical outlet? If plugged into a *power strip*, make sure it is actually working. Check the **LED Power & Communication Indicators** (see “LED Indicators” on page 1 - 8) to see the computer’s power status.

- **Connections** - Check all the **cables** to make sure that there are no **loose connections** anywhere.

- **Power Savings** - Make sure that the system is not in **Hibernate** or **Sleep** mode by pressing the keys configured in your **Power Options** (see “Power-Saving States” on page 3 - 7), the **Fn + F12** key combination, or power button to wake-up the system.

- **Brightness** - Check the brightness of the screen by pressing the **Fn + F8 and F9** keys to adjust the brightness.

- **Display Choice** - Press **Fn + F7** to make sure the system is not set to “external only” display.

- **Boot Drive** - Make sure there are no **optical media and/or USB storage devices** in any connected drive.
Backup and General Maintenance

• Always **backup** your important data, and keep copies of your OS and programs safe, but close to hand. Don’t forget to note the **serial numbers** if you are storing them out of their original cases, e.g. in a CD wallet.

• Run **maintenance programs** on your hard disk and OS as often as you can. You may schedule these programs to run at times when you are not using your computer. You can use those that are provided free with your OS, or buy the more powerful dedicated programs to do so.

• Write down your passwords and keep them safe (away from your computer). This is especially important if you choose to use a **Supervisor** password for the BIOS (see “The Insyde BIOS Utility” on page 5 - 2).

• Keep copies of vital **settings files** such as network, dialup settings, mail settings etc.(even if just brief notes).

**Warranty**

The CPU is not a user serviceable part. Opening this compartment, or accessing the CPU in any way, may violate your warranty.
Viruses

- Install an Anti-Virus program and keep the definitions file (the file which tells your program which viruses to look for) up to date. New computer viruses are discovered daily, and some of them may seriously harm your computer and cause you to lose data. Anti-Virus programs are commercially available and the definitions file updates are usually downloadable directly from the internet.

- Be careful when opening e-mail from sources you don’t know. Viruses are often triggered from within e-mail attachments so take care when opening any attached file. You can configure most Anti-Virus programs to check all e-mail attachments. Note: You should also beware of files from people you know as the virus may have infected an address book and been automatically forwarded without the person’s knowledge.

- Keep a “Bootable CD-ROM/DVD-ROM/USB storage device” (this CD/DVD/USB device provides basic information which allows you to startup your computer) handy. You may refer to your OS’s documentation for instructions on how to make one, and many Anti-Virus programs will also provide such a disk (or at least instructions on how to make one).
Troubleshooting

Upgrading and Adding New Hardware/Software

- Do not be tempted to make changes to your Windows Registry unless you are very sure of what you are doing, otherwise you will risk severely damaging your system.

- Don’t open your computer or undertake any repair or upgrade work if you are not comfortable with what you are doing.

- Read the documentation. We can assume, since you are reading this that you are looking at the computer’s manual, but what about any new peripheral devices you have just purchased? Many problems are caused by the installation of new hardware and/or software. Always refer to the documentation of any new hardware and/or software, and pay particular attention to files entitled “READ ME” or “READ ME FIRST”.

- When installing a new device always make sure the device is powered on, and in many cases you will need to restart the computer. Always check that all the cables are correctly connected.

- Make sure you have installed the drivers for any new hardware you have installed (latest driver files are usually available to download from vendor’s websites).
Troubleshooting

- Thoroughly check any **recent changes** you made to your system as these changes may affect one or more system components, or software programs. If possible, go back and undo the change you just made and see if the problem still occurs.

- Don’t over complicate things. The less you have to deal with then the easier the source of the problem may be found; **Example** - if your computer has many devices plugged into its ports, and a number of programs running, then it will be difficult to determine the cause of a problem. Try disconnecting all of the devices and restarting the computer with all the peripheral devices unplugged. A process of elimination (adding and removing devices and restarting where necessary) will often find the source of a problem, although this may be time consuming.

| When using a **Bluetooth headset the audio appears to be mono** and not stereo. | **This is a common issue with Bluetooth headsets. To resolve this issue do the following (you will need to repeat this procedure after every boot up, restart, or when the system resumes from hibernation):**  
  1. Go to the Devices & Printers control panel in **Windows**.  
  2. Double-click the Bluetooth headset.  
  3. Click **Connect** to complete the stereo connection.

Intel® Optane™ Notes

Intel® Optane™ is a combination of a compatible memory device and Intel Rapid Technology software. This combination is designed to speed up your system performance. However note the following:

• The SATA Mode should be set BEFORE installing an operating system, and after you have backed up all necessary files and data (see sidebar). See “SATA Mode Setup (Optane™, RAID or AHCI)” on page 6 - 2 for details. Make sure you install the Intel Rapid Storage Technology application if you have set the SATA Mode to Intel RST Premium, or to AHCI (see “IRST Driver Installation” on page 6 - 29).

• It is very important to make sure that when you create a hard disk drive partition when installing Windows for an Intel® Optane™ system, that you leave at least a minimum of 5MB of unallocated space (note this is 5MB only, not GB).

• After setting the SATA mode to Intel® Optane™ and installing the Intel® Rapid Storage Technology application, DO NOT uninstall the Intel® Rapid Storage Technology application.

• If you are reinstalling a system that has previously been setup in Intel RST Premium mode, make sure you have disabled the Intel Optane Memory. If you haven’t cleared the Optane setup you may not find a suitable hard disk drive partition on which to reinstall an operating system.

• If you need to reinstall an operating system, uninstall the IRST driver/application or swap the hard disk drive (or Intel® Optane™ SSD) make sure you have disabled the Intel Optane Memory.

### Mini DisplayPort 1.2 & DisplayPort 1.4 over USB 3.2 Gen 2 (Type C)

The Mini DisplayPorts are miniaturized versions of the DisplayPort, which is a digital display interface standard that allows a digital audio/video interconnect, between the computer and its external display or a home-theater system.

The DisplayPort 1.4 over USB 3.2, Gen 2 (Type-C) combines full DisplayPort A/V performance with SuperSpeed USB in a single connector. You can use a USB Type-C to HDMI or DisplayPort compatible cable connected to the DisplayPort over USB Type-C port to connect an external display.

### RJ-45 LAN Jack

This port supports LAN (Network) functions (you will need to open the cover slightly before inserting a LAN cable).

**Note:** Broadband (e.g. ADSL) modems usually connect to the LAN port.

### Security Lock Slot

To prevent possible theft, a Kensington-type lock can be attached to this slot. Locks can be purchased at any computer store.

---

**DisplayPort Cables**

*When using cables connected to the DisplayPort, try to make sure that the cables are not bent excessively, as bending the cables may cause signal problems.*

Appendix B: Control Center

Overview

The following chapter will give a quick description of the functions of the Control Center & Flexikey® applications.

Control Center

The Control Center provides quick access to Power Modes, Fan settings, LED Keyboard configuration and the Flexikey application. Click icons to access the appropriate menu, and make adjustments as applicable.

Flexikey®

The Flexikey® application is a quick hotkey configuration application, which allows you to assign a single key to launch multiple key combinations, to create text macros and to disable certain keys. The application can also be used to configure the mouse buttons to create hotkeys for gaming etc. Click Flexikey in the Control Center to launch the application.
Run the **Control Center** from the **Windows Start** menu or by clicking the icon in the notification area of the taskbar.

*Figure B - 1 - Control Center Screens*
**Fan Speed Setting**

You can set the fan speed to **Maximum (full power), Automatic or Custom** from this menu item. The fan speed will adjust itself automatically to control the heat of the CPU. However you can adjust the setting to maximum if you prefer. You can use the **Offset** slider to adjust the settings to your preference, however these settings can be overridden by the system as a safety precaution, if it requires heavier use of the fan.

The **Custom** setting allows you to click and drag on any of the 2 midrange nodes on the graph in order to adjust the temperature parameters of the **CPU Fan** or **GPU Fan** (click on the CPU Fan or GPU Fan icon for either on to select it, then click and drag either of the midrange nodes), then click **Save** to retain the setting changes.

![Figure B - 2 - CPU/GPU Fan Custom Settings](image)
Power Modes

Power Modes allows you to adjust the power mode by clicking the appropriate icon.

- **Power Saving** mode focuses on saving battery life (the CPU Turbo Boost is On and dGPU Turbo is Off).
- **Quiet** mode focuses on reducing fan noise and will decrease both CPU power and dGPU power.
- **Entertainment** balances CPU and dGPU power and is ideal for watching videos etc.
- **Performance** mode is ideal for gaming with higher CPU and dGPU performance.

**Note**: You can use the Fn +3 key combination to quickly toggle through, and select, the Power Modes.

Figure B - 3 - **Power Modes**
LED Keyboard

The LED Keyboard menu will allow to change the **Brightness** and **Keyboard Sleep Timer**. The LED **Keyboard** application can be accessed by pressing the **Fn** plus key (or by clicking **LED Keyboard** in the Control Center), or from the **Windows Start** menu.

**Override Boot Effect**

On boot the colored keyboard will momentarily flash. You can click in the **Override Boot Effect** check box to disable the keyboard flashing effect as the system boots.

*Figure B - 4 - LED Mode for Illuminated Colored LED Keyboards*
Color Swatch
The color swatch in the middle of the screen allows you to select a range of colors for your keyboard backlight by clicking on the color required. Click to select any colors from the swatch to apply to the keyboard.

Keyboard Sleep Timer
Enable and then select the amount of time the system for which the system is idle before the keyboard LED enters sleep mode (i.e. the LED keyboard illumination will turn off to save power).

Brightness
Click on any of the numbers (1 - 4) on the Brightness bar to set the brightness level of the LED Device. You can also turn the keyboard backlight LED Device off by clicking the OFF button, or by using the Fn plus `key.
**Flexikey® Application**

Click **Flexikey** in the **Control Center** or **Start** menu to launch the application.

**Profiles**

The controls at the top right side of the application relate to Profiles. You can **Add/Delete** Profiles (you can maintain 12 active Profiles), **Export** and **Import** profiles by clicking on the appropriate icon. If you double-click on a Profile you can change the **Profile Name**, and import an **Image** file (images created using PNG files).

---

**Figure B - 6 - Flexikey® - Profiles (Keyboard Macro)**
• **EXPRESS KEY** - This feature allows you to configure a single key to send multiple key combinations or to create more useful shortcut keys. This is useful in gaming or when using applications which have a complex set of keyboard shortcuts.

• **EXPRESS TEXT** - With this you can assign single keys to send commonly used strings of text.

• **DISABLE** - Use this function to disable any keyboard keys.

• **STATISTICS** - Use this to quickly record keys in use in any application, and to disable unused keys.

**Keyboard Macro and Mouse Macro Settings**
Click **Enable** (at the bottom right of the screen) to create settings for the keyboard and/or mouse by clicking the tab at the bottom of the screen. Clicking on **Keyboard Macro** or **Mouse Macro** allows you to access the settings page for the either the keyboard or mouse.

**Enabling or Disabling Flexikey®**
You can enable or disable Flexikey® (and therefore any hotkeys or mouse profile functions currently in use) by using the **Fn + Backspace** key combination. Pressing this key combination will toggle you between the currently selected keyboard or mouse profile to the standard keyboard and/or mouse settings, and back again. An on screen icon will also pop-up to display the status of the application as it is toggled on/off.
Keyboard Macro

The keyboard macro settings allow you to configure actions for any single key (or a combination of keys). Click the key and then select the action type (Express Key, Express Text or Disable) from the menu at the top of the page.

Figure B - 8 - Keyboard Macro

Note that you can assign actions to any keyboard key except those that appear blacked out e.g. the Windows key, Fn, Alt and Ctrl keys etc.
**Mouse Macro**

When an external mouse is attached, the mouse macro settings allow you to configure actions for the left \(1\), right \(2\) and middle \(3\) buttons of the attached mouse, and also for any backward \(4\) and forward \(5\) buttons if applicable (on a gaming type mouse). Click the button number and then select the action type (**Express Key**, **Express Text** or **Disable**) from the menu.

*Figure B - 9 - Mouse Macro Configuration*
Keyboard Macro - Express Key

To configure a single key to send multiple key combinations, or to create more useful shortcut keys, use Express Key.

1. Enable and select the Keyboard Macro, click on the chosen key to select it, and then click to select Express Key.

*Figure B - 10 - Keyboard Macro - Record Express Key*
2. In the following example we want to change an existing game key configuration which uses the **left shift** key for sprinting, and the **W** key for moving forwards, to use the **1** key to combine this movement to sprint forward.

3. Click the **Record** button and then **press** the key or keys (in this case we will **press** Left Shift and **W**) required (make sure you **press the key(s) required** and do not click on them).

4. Click the **Record** button again to complete the process and stop recording.

5. If you want to remove any individual key click to select it, and then click **Restore**.

6. Any assigned **Express Keys** will be highlighted in **green**.
Enabling Delay Time
If you want to create a delay between key presses within the key combination, then you can use Enable Delay Time function to do so.

1. **Enable** and select the keyboard under your chosen profile, click on the chosen key to select it, and then click to select **Express Key**.
2. Click the **Record** button and then press the key or keys required in the sequence and time delay between key presses required (make sure you **press the key(s) required** and do not click on them).
3. Click the **Record** button again to complete the process and stop recording.
4. Click to select a key in the sequence and click **Enable Delay Time**, then click a key to view the time delay.

![Figure B - 11 - Enable Delay Time](image-url)
5. You can edit the delay between key presses by clicking in the **Delay Time (MS)** field and typing a new number for the delay between the key presses.

6. If you want to remove any individual key click to select it, and then click the delete symbol.

7. If you want to clear all the settings click **Restore** to return to the default key setting.

*Figure B - 12 - Time Record Between Key Presses*
Keyboard Macro - Express Text

A single key can be set to send a string of text within any application using Express Text.

1. **Enable** and select the keyboard, click to select a key, and then click to select Express Text.
2. Click the Record button in Start key and press the keys to use (the Start key is the key used to in your target program to open a text message).
3. Click in the Text Context field and type in your message and click Save.

![Figure B - 13 - Keyboard Macro - Express Text](image)

Figure B - 13 - Keyboard Macro - Express Text
4. Click the **Record** button in **Send** and press the keys to use if required (the **Send** key is the key used to in your target program to send a text message e.g. the Enter key would be the most commonly used).

5. The key will now be configured to send the text message in the target program under your chosen Profile, and the key will appear in **blue**.

6. If you want to remove any **Express Text** key, select it and click on **Restore**.

---

**Copy & Paste Text**

Note that some applications and games do not support copy and pasted text. Where this is the case, any text you may have copy and pasted in to the “Type to Text” field may not be displayed within the application. In this case you will need to type the text into the field instead.
Keyboard Macro - Disable

You can use the program to disable any keys not required.

1. **Enable** and select the keyboard, click to select a key to disable, and then click to select **Disable**.
2. The key will now be disabled.
3. If you want to enable the key again, select it and click on **Restore**.
4. The key will be disabled, and the key will appear in **Gray**.
Mouse Macro - Express Key

To assign a mouse button click to send multiple key combinations (an external mouse must be attached), or to create more useful shortcut keys, use Express Key.

1. Enable and select the mouse, click on a mouse button to select it, and then click to select Express Key.
2. In the following example we will configure the central mouse wheel to combine the actions of left shift key for sprinting, and the W key for moving forwards in a game program.
3. Click on the central mouse wheel for the shortcut action.
4. Click the Record button and then press the key or keys (in this case we will press Left Shift and W) required (make sure you press the key(s) required and do not click on them).
5. Click the Record button again to complete the process and stop recording.
6. If you want to remove any mouse setting click to select it, and then click Restore.
7. The mouse button for any assigned Express Keys will appear in green.

Enabling Time Record for Mouse Settings

If you want to create a delay between key presses within the mouse click combination, then you can use Time Record function to do so in the same manner as that used for keyboard settings (see “Enabling Delay Time” on page B - 13).
Mouse Macro - Express Text

A mouse button click can be set to send a string of text within any application using Express Text.

1. Enable and select the mouse, click on a mouse button to select it, and then click to select Express Text.
2. Click the Record button in Start key and press the keys to use (the Start key is the key used to in your target program to open a text message). Click the Record button again to stop the process.
3. Click in the Text Context field and type in your message and click Save.
4. Click the Record button in Send and press the keys to use (the Send key is the key used to in your target program to send a text message e.g. the Enter key would be the most commonly used). Click the Record button again to stop the process.
5. The key will now be configured to send the text message in the target program under your chosen Profile, and the key will appear in blue.
6. If you want to remove any Express Text key, select it and click on Restore.

Copy & Paste Text

Note that some applications and games do not support copy and pasted text. Where this is the case, any text you may have copy and pasted in to the “Type to Text” field may not be displayed within the application. In this case you will need to type the text into the field instead.
Mouse Macro - Disable

You can use the program to disable any mouse button clicks if not required.

1. **Enable** and select the mouse, click on a mouse button to select it, and then click to select **Disable**.
2. The button click will now be disabled.
3. If you want to enable the button again, select it and click on **Restore**.
4. The button click will be disabled under your chosen Profile, and the key will appear in **Gray**.
Statistics

The **Statistics** tab allows you to record keys used in any application, and to **disable** any infrequently, or unused, keys to save any accidental incorrect key presses.

1. Click the **Statistics** Tab, and press the **Record** button to start recording the frequency of key presses for keys used.
2. You can then go to the application for which you wish to use the profile, and use the application as per normal so that a standard set of keys used may be recorded.
3. Return to the Flexikey® application and press **Record** button again to stop recording.
4. At the end of the recording process colors will represent the frequency of key presses, with the darker keys as the most frequent through to lighter the less frequent (the color dial on the left of the screen displays the color code against the number of key presses).
5. You can move the mouse over any key to see the number of times it has been pressed.
6. If you want to disable a key click **Quick Disable** and click the keys you wish to disable (the key will become grayed out) and then click **Save** to retain the settings.

Mustang W656 Notebook
Appendix C: Video Driver Controls

Overview

The video features for this computer can be configured using the Windows Display Settings, Intel Graphics Command Center or NVIDIA control panel.

Video Card Options

Note that card types, specifications and drivers are subject to continual updates and changes. Check with your distributor/supplier for the latest details on video cards supported.

Configuring External Displays

When multiple external display are attached it is recommended that you use the System (in Settings - page C - 9) control panel or the + P (or Fn + F7 - page C - 8) key combination, to configure the external displays.

External displays can also be configured by using the Intel Graphics Command Center (page C - 31) control panel.

Further video configuration options are available in the NVIDIA (page C - 34) control panel.
Microsoft Hybrid Graphics

Most notebook computers come with either a discrete or integrated graphics solution.

**Discrete** graphics solutions feature a dedicated Graphics Processing Unit (GPU) which are capable of playing games, watching HD video or running GPU-based applications. However computers with discrete graphics solutions tend to be heavy in power consumption, and slightly larger in size in order to incorporate the dedicated discrete GPU.

**Integrated** graphics solutions usually feature memory sharing technology to help save power consumption and allow for longer battery life. However computers with integrated graphics solutions will not usually run games, HD video or GPU-based applications without severe limitations.

Microsoft Hybrid Graphics is a seamless switchable graphics technology designed to get best performance from the graphics system while allowing longer battery life, without having to manually change settings. Thus when an application is run that requires extra performance or quality, then the operating system will run the discrete GPU (dGPU); when the system does not require such enhanced performance it will let the integrated (iGPU) handle it.
How Switchable Technology works
When the system is powered up and is displaying just the desktop, the dGPU will be powered off. In this case the system is running in the same way as a system without a discrete graphics solution. However when an application that requires use of the dGPU is run (e.g., a game or HD Video), the dGPU is powered on and takes over the processing duties. If the program is closed, then the dGPU will be powered back down again until required.
Video Driver Installation

Make sure you install the drivers in the order indicated in Table 4-1, on page 4-4.

Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive and click Install Drivers (button).

Intel Video (VGA)
1. Click 4.Install VGA Driver > Yes.
2. Click Next > Yes > Next > Next.
3. Click Finish to restart the computer.
4. Intel Graphics Command Center will download but you will need to have a working internet connection.
5. Click the Start menu in Windows to access the Microsoft Store App tile under Explore.
6. Click the Sign in icon and select Downloads and updates.
7. Click Check for Updates.
8. A list of apps being downloaded will pop-up.
9. To prioritize the driver you can click Pause all to pause the queue.
10. Click on Intel Graphics Command Center and click on the resume icon to download the driver.
11. When finished the Intel Graphics Command Center will appear in the Start menu.

Video Card Options

Note that card types, specifications and drivers are subject to continual updates and changes. Check with your distributor/supplier for the latest details on video cards supported.
NVIDIA Video (VGA)
1. Click **5. Install NVIDIA VGA Driver > Yes.**
2. Click **Agree and Continue (button)** to accept the terms of the license agreement.
3. Click **Next.**
4. Click **Close** to complete the installation.
5. Go to the Microsoft Store to download the NVIDIA Control Panel.
6. After all the drivers have been installed (an internet connection is required) run the **NVIDIA GeForce Experience** by clicking the desktop icon (or App).

**Note:** After installing the video driver go to the **Display** control panel to adjust the video settings to the highest resolution.

NVIDIA Apps
1. Click **6. Install NVIDIA Apps > Yes.**
2. Click **Agree and Continue (button)** to accept the terms of the license agreement.
3. Click **Next.**
4. Click **Close** to complete the installation.
5. After all the drivers have been installed (an internet connection is required) run the **NVIDIA GeForce Experience** by clicking the desktop icon.

NVIDIA GeForce Experience

If you have a working internet connection (and you will need remain connected to the internet to run NVIDIA GeForce Experience) you can click the NVIDIA GeForce Experience desktop icon (or App) to run the application. This will optimize your gaming settings for your NVIDIA GPU by downloading the latest settings from the NVIDIA cloud data center.

You may need to create an NVIDIA account to log-in to the system (alternatively you may be able to use your Facebook or Google account to log-in).

After logging in to the system you can click through any on-screen instructions to update your settings and check for installed games etc.

By running the NVIDIA GeForce Experience you will be able to download the latest drivers to insure compatibility with games, power saving features and various other enhancements for your NVIDIA GPU (these features are subject to change and update so check with the NVIDIA website for the latest information).

Note that to enable BatteryBoost you must be connected to the internet (see over).
NVIDIA GeForce Experience - BatteryBoost

BatteryBoost allows you to optimize your system’s battery life when gaming. You can adjust the BatteryBoost slider in Preferences > BatteryBoost (make sure you have restarted the computer after the first run of NVIDIA GeForce Experience).

Running BatteryBoost
1. On first run of NVIDIA GeForce Experience you should be connected to the internet (BatteryBoost will not appear at this stage).
2. After the first run you should restart the computer manually, but you must still be connected to the internet (the LAN cable should be plugged-in, or your WiFi connection should be set to Connect Automatically) as the computer restarts.
3. BatteryBoost will be present when NVIDIA GeForce Experience is run again.

Click to put a tick in the box alongside BatteryBoost to enable the feature, then adjust the slider towards Longer battery life or Higher performance as preferred.
Configure Other Displays Using Project

You can configure attached displays from Project.

1. Attach your external display(s) to the appropriate port, and turn it(them) on.
2. Press the $\text{Alt} + \text{P}$ key combination.
3. Click on any one of the options from the menu to select **PC screen only**, **Duplicate**, **Extend** or **Second screen only**.
4. You can also click **Connect to a wireless display** at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.

*Figure C - 1* Project
Configuring an External Display In Windows

The System > Display Control Panel in Settings may also be used to configure displays.

1. Attach your external display to the appropriate port, and turn it on.
2. Click the Start Menu and click Settings > System (or right-click the desktop and select Display Settings).
3. Click the Multiple Displays menu and select Duplicate these displays, Extend these displays or Show only on 1/2.
4. Click Keep changes to save any changes made.

HDMI Audio Configuration

HDMI (High-Definition Multimedia Interface) carries both audio and video signals. In some cases it will be necessary to go to the Sound control panel and manually configure the HDMI audio output as per the instructions below.

1. Go to the Sound control panel.
2. Click Playback (tab)
3. The playback device will be selected.
4. You may need to select the audio device and click Set Default (button).
5. Double-click the device to access the control panel tabs.

![Figure C - 4](Sound - HDMI Device (Set Default))

Volume Adjustment
The sound volume level can be clicking using the volume control icon in the notification area of the taskbar.
6. Adjust the HDMI settings from the control panel tabs.
7. Click OK to close the Sound control panel.

Figure C - 5
HDMI Device Properties
HDMI Notes
• Connect a device with HDMI support to the HDMI-Out port BEFORE attempting to play audio/video sources through the device.
• To play audio sources through your external display’s (TV or LCD) speakers you will need to go to the audio configuration control panel on the display and configure the audio input accordingly (see your display device manual).

HDMI Video Configuration
1. Connect an HDMI cable from the HDMI-Out port to your external display.
2. Configure your external display as per the instructions in this chapter.
3. Set up your external display (TV or LCD) for HDMI input (see your display device manual).
4. You can now play video/audio sources through your external display.

Other Applications
If you are using a third party application to play DVDs etc. from any attached DVD device, you will need to consult the application’s documentation to see the appropriate audio configuration (the application must support digital to analog translation).
Wireless Display

Wireless Display uses your Wireless LAN module/WLAN Bluetooth Combo module (you need to make sure that your video adapter/display device is compatible with your particular WLAN/Combo module) in conjunction with a compatible video adapter/display device (purchased separately) to allow you to display the contents of the notebook display on another display (e.g. HDTV), without the need to have cables stretching across a room.

You can use the wireless display to play games, browse the internet, display videos or photo slide shows on your TV/external display without using HDMI or A/V cables.

Before configuring Wireless Display you will need to set up your compatible adapter with your display/speakers. Connect the adapter using an HDMI or A/V cable and turn on the display (or in the case of speakers connect them to the wireless speaker adapter with the cables provided with the adapter), and then set the display to the appropriate input channel (see the documentation supplied with your compatible adapter/display for full details).

Note that no driver or application is required for wireless display in Windows 10.
Wireless Display Configuration

1. Note that no driver or application is required for wireless display in Windows 10.
2. Press the + P key combination.
3. Click **Connect to a wireless display** at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.

4. The system will then search for compatible display devices (**this may take up to 60 seconds** so allow time for this to complete).
5. Double-click any detected display device in the list.
6. Double-click any detected display device in the list.
7. You may then need to input a pin number for the device to which you are connecting and click **Next**.
8. The display will then connect (for specific settings for your display see the documentation supplied with your compatible adapter/display for full details).
9. Go to the **Project** menu and click **Disconnect** to temporarily disconnect from the wireless display.
10. To permanently disconnect from the display (you will need to go back through the connection process again) you can select it in **Devices** and click **Remove Device** > **Yes**.
Intel® Graphics Command Center

Advanced video configuration options are provided by the Intel Graphics Command Center.

1. Access the Intel Graphics Command Center from the Start menu in Windows.
OR

2. You can right-click the Intel Graphics Command Center in the Start menu and pin the control panel to the taskbar.

NVIDIA Control Panel

More advanced video configuration options are provided in the NVIDIA Control Panel tab.

1. Access the NVIDIA Control Panel from the Start menu in Windows (or right-click the desktop and select NVIDIA Control Panel).

![Figure C - 23 NVIDIA Control Panel](image)
The NVIDIA Control Panel provides additional video configuration controls and tools which allow quick access to features such as image settings, 3D Settings and video configuration. Additional menus will appear when external displays are attached to the HDMI port.

Navigating the Control Panel

Navigate through the control panels in much the same way as you would a web page. Click on the sub-heading tasks in the left menu (and on the highlighted links) for information. Use the buttons on the top left to go back, forward etc.

Hybrid technology will switch between the integrated GPU and discrete GPU seamlessly and automatically without input from the user. However customization options are offered for users who prefer to set their own parameters for GPU usage.

Global Settings

Global settings allows you to set the preferred graphics processor for overall use. Ideally this would be the iGPU for battery life, but this can be set to the dGPU if preferred.

1. Go to the NVIDIA Control Panel.
2. Click Manage 3D Settings (3D Settings) and select Global Settings (tab).
3. Select either Integrated graphics (iGPU) or High performance NVIDIA Processor (dGPU) from the drop-down menu.
4. Click the Setting menu items to select any options required.
5. Click Apply to save the settings.

Program settings allows you to make specific adjustments for installed applications.

1. Go to the NVIDIA Control Panel.
2. Click Manage 3D Settings (3D Settings) and select Program Settings (tab).
3. Select a program to customize from the drop-down menu, or click Add to add any program that does not appear in the menu.
4. Select the preferred graphics processor for the program from the drop-down menu.
5. Click the Setting menu items to select any options required.
6. Click Apply to save the settings.

Configure Surround, PhysX®

NVIDIA® PhysX® is a physics engine that can use the GPU to accelerate game and 3D application performance. You can select the GeForce video card or CPU as a PhysX® processor, or configure the computer to auto-select a PhysX® processor (recommended default setting).

1. Go to the NVIDIA Control Panel.
2. Click Configure Surround, PhysX.
3. Click to select a processor from the menu (PhysX Settings); Auto-select (recommended) is the default setting.
4. Click Apply to save the settings.

Change Resolution

You can **Change Resolution** for your attached displays (to the HDMI port) from the NVIDIA control panel.

1. Attach your external display to the appropriate port, and turn it on.
2. Go to the **NVIDIA Control Panel**.
3. Double-click **Display** (if the sub-menus are not visible), and then click **Change resolution**.
4. Click to select the display, and then adjust the settings from “2. Choose the resolution.” and “3. Apply the following settings.”
5. Click **Apply** to save the settings.
HDCP Status

If your (HDMI connected) external display is HDCP (High Bandwidth Digital Content protection) compatible then the NVIDIA control panel will display the HDCP system status.

Adjust Video Settings

You can adjust video color and image settings from the Video sub-menus.

1. Go to the NVIDIA Control Panel.
2. Click “+” next to Video if its sub-items are not shown and then click either Adjust video color settings or Adjust video image settings.
3. Make any adjustments required for any display and click Apply to save the settings.

Appendix D: Specifications

Latest Specification Information

The specifications listed in this Appendix are correct at the time of going to press. Certain items (particularly processor types/speeds and CD/DVD device types) may be changed, updated or delayed due to the manufacturer's release schedule. Check with your distributor/supplier for details.

Note that this computer model series may support a range of CPUs and/or video adapters.

To find out which CPU is installed on your system go to the Start menu and select Settings, and then select System and click About. This will also provide information on the amount of Installed RAM etc.

To get information on your system's video adapter go to the Start menu and select Settings, and then select System and click Display> Advanced display settings > Display adapter properties.
