Preface

R&TTE Directive
This device is in compliance with the essential requirements and other relevant provisions of the R&TTE Directive 1999/5/EC.

This device will be sold in the following EEA countries: Austria, Italy, Belgium, Liechtenstein, Denmark, Luxembourg, Finland, Netherlands, France, Norway, Germany, Portugal, Greece, Spain, Iceland, Sweden, Ireland, United Kingdom, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Slovakia, Poland, Slovenia.

ErP Off Mode Power Consumption Statement:
The figures below note the power consumption of this computer in compliance with European Commission (EC) regulations on power consumption in off mode:

• Off Mode < 0.5W
CE Marking

This device has been tested to and conforms to the regulatory requirements of the European Union and has attained CE Marking. The CE Mark is a conformity marking consisting of the letters “CE”. The CE Mark applies to products regulated by certain European health, safety and environmental protection legislation. The CE Mark is obligatory for products it applies to: the manufacturer affixes the marking in order to be allowed to sell his product in the European market.

This product conforms to the essential requirements of the R&TTE directive 1999/5/EC in order to attain CE Marking. A notified body has determined that this device has properly demonstrated that the requirements of the directive have been met and has issued a favorable certificate of expert opinion. As such the device will bear the notified body number 0560 after the CE mark.

The CE Marking is not a quality mark. Foremost, it refers to the safety rather than to the quality of a product. Secondly, CE Marking is mandatory for the product it applies to, whereas most quality markings are voluntary.
Preface

FCC Statement
(Federal Communications Commission)
You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Re orient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the service representative or an experienced radio/TV technician for help.

Operation is subject to the following two conditions:

1. This device may not cause interference.
   And
2. This device must accept any interference, including interference that may cause undesired operation of the device.
FCC RF Radiation Exposure Statement:

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

Warning

Use only shielded cables to connect I/O devices to this equipment. You are cautioned that changes or modifications not expressly approved by the manufacturer for compliance with the above standards could void your authority to operate the equipment.
IMPORTANT SAFETY INSTRUCTIONS

Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock, and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using this equipment with a telephone line (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit according to the model's requirements:

- **Dual** Full Range AC/DC Adapters - AC Input 100 - 240V, 50 - 60Hz, DC Output 20V, 14A * 2 (560 Watts) minimum.
Instructions for Care and Operation
The notebook computer is quite rugged, but it can be damaged. To prevent this, follow these suggestions:

1. **Don’t drop it, or expose it to shock.** If the computer falls, the case and the components could be damaged.
   
   ![Image 1](image1.png)  
   ![Image 2](image2.png)  
   ![Image 3](image3.png)

   *Do not expose the computer to any shock or vibration.  
   Do not place it on an unstable surface.  
   Do not place anything heavy on the computer.*

2. **Keep it dry, and don’t overheat it.** Keep the computer and power supply away from any kind of heating element. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.

   ![Image 4](image4.png)  
   ![Image 5](image5.png)  
   ![Image 6](image6.png)  
   ![Image 7](image7.png)

   *Do not expose it to excessive heat or direct sunlight.  
   Do not leave it in a place where foreign matter or moisture may affect the system.  
   Don’t use or store the computer in a humid environment.  
   Do not place the computer on any surface that will block the Vents/Fan Intakes.*
Preface

3. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.

4. **Follow the proper working procedures for the computer.** Shut the computer down properly and don’t forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.

<tr>
<th>Do not turn off the power until you properly shut down all programs.</th>
<th>Do not turn off any peripheral devices when the computer is on.</th>
<th>Do not disassemble the computer by yourself.</th>
<th>Perform routine maintenance on your computer.</th>
</tr>
</thead>
</table>

5. **Take care when using peripheral devices.**

| Use only approved brands of peripherals. | Unplug the power cord before attaching peripheral devices. |
Servicing
Do not attempt to service the computer yourself. Doing so may violate your warranty and may expose you and the computer to electric shock. Refer all servicing to authorized service personnel. Unplug the computer from the power supply. Then refer servicing to qualified service personnel under any of the following conditions:

- When the power cord or AC/DC adapter is damaged or frayed.
- If the computer has been exposed to rain or other liquids.
- If the computer does not work normally when you follow the operating instructions.
- If the computer has been dropped or damaged (do not touch the poisonous liquid if the LCD panel breaks).
- If there is an unusual odor, heat or smoke coming from your computer.

Bottom Cover Removal Warning
Users should not remove any cover(s) and/or screw(s) for the purposes of device upgrade as this may violate the terms of your warranty. If you need to replace/remove the hard disk/RAM/optical device etc., for any reason, please contact your distributor/supplier for further information.

Removal Warning
When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and screw(s) before restoring power to the system.
Also note the following when the cover is removed:
- Hazardous moving parts.
- Keep away from moving fan blades.
Preface

Power Safety

The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC/DC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies (i.e. AC/DC adapter or car adapter).

Power Safety Warning

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines and power cord).

You must also remove your battery in order to prevent accidentally turning the machine on. Before removing the battery disconnect the AC/DC adapter from the computer.

Do not plug in the power cord if you are wet.

Do not use the power cord if it is broken.

Do not place heavy objects on the power cord.
Polymer Battery Precautions

Note the following information which is specific to polymer batteries only, and where applicable, this overrides the general battery precaution information overleaf.

- Polymer batteries may experience a slight expansion or swelling, however this is part of the battery’s safety mechanism and is not a cause for concern.
- Use proper handling procedures when using polymer batteries. Do not use polymer batteries in high ambient temperature environments, and do not store unused batteries for extended periods.
- If you are working in areas of low temperature use the AC/DC adapter to power the computer.

See also the general battery precautionary information overleaf for further information.
Preface

General Battery Precautions

• Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
• Do not remove any batteries from the computer while it is powered on.
• Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
• If you do not use the battery for an extended period, then remove the battery from the computer for storage.
• Recharge the batteries using the notebook’s system. Incorrect recharging may make the battery explode.
• Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
• Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
• Keep the battery away from metal appliances.
• Affix tape to the battery contacts before disposing of the battery.
• Do not touch the battery contacts with your hands or metal objects.

Battery Disposal & Caution

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer’s instructions.
Cleaning
Do not apply cleaner directly to the computer; use a soft clean cloth.
Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Cleaning Instructions
(For Computer Models Supplied with Light Blue Cleaning Cloth)
Some computer models in this series come supplied with a light blue cleaning cloth. To clean the computer case with this cloth follow the instructions below:

1. Power off the computer and peripherals.
2. Disconnect the AC/DC adapter from the computer.
3. Use a little water to dampen the cloth slightly.
4. Clean the computer case with the cloth.
5. Dry the computer with a dry cloth, or allow it time to dry before turning on.
6. Reconnect the AC/DC adapter and turn the computer on.
Travel Considerations
As you get ready for your trip, run through this list to make sure the system is ready to go:

1. Check that the battery pack and any spares are fully charged.
2. Power off the computer and peripherals.
3. Close the display panel and make sure it's latched.
4. Disconnect the AC/DC adapter and cables. Stow them in the carrying bag.
5. The AC/DC adapter uses voltages from 100 to 240 volts so you won’t need a second voltage adapter. However, check with your travel agent to see if you need any socket adapters.
6. Put the notebook in its carrying bag and secure it with the bag’s straps.
7. If you’re taking any peripherals (e.g. a printer, mouse or digital camera), pack them and those devices’ adapters and/or cables.
8. Anticipate customs - Some jurisdictions may have import restrictions or require proof of ownership for both hardware and software. Make sure your “papers” are handy.

Power Off Before Traveling
Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the Vents/Fan Intakes to be blocked. To prevent your computer from overheating make sure nothing blocks the Vent/Fan Intakes while the computer is in use.
On the Road

In addition to the general safety and maintenance suggestions in this preface, and Chapter 8: Troubleshooting, keep these points in mind:

Hand-carry the notebook - For security, don’t let it out of your sight. In some areas, computer theft is very common. Don’t check it with “normal” luggage. Baggage handlers may not be sufficiently careful. Avoid knocking the computer against hard objects.

Beware of Electromagnetic fields - Devices such as metal detectors & X-ray machines can damage the computer, hard disk, floppy disks, and other media. They may also destroy any stored data - Pass your computer and disks around the devices. Ask security officials to hand-inspect them (you may be asked to turn it on). Note: Some airports also scan luggage with these devices.

Fly safely - Most airlines have regulations about the use of computers and other electronic devices in flight. These restrictions are for your safety, follow them. If you stow the notebook in an overhead compartment, make sure it’s secure. Contents may shift and/or fall out when the compartment is opened.

Get power where you can - If an electrical outlet is available, use the AC/DC adapter and keep your battery(ies) charged.

Keep it dry - If you move quickly from a cold to a warm location, water vapor can condense inside the computer. Wait a few minutes before turning it on so that any moisture can evaporate.
Preface

Developing Good Work Habits

Developing good work habits is important if you need to work in front of the computer for long periods of time. Improper work habits can result in discomfort or serious injury from repetitive strain to your hands, wrists or other joints. The following are some tips to reduce the strain:

- Adjust the height of the chair and/or desk so that the keyboard is at or slightly below the level of your elbow. Keep your forearms, wrists, and hands in a relaxed position.
- Your knees should be slightly higher than your hips. Place your feet flat on the floor or on a footrest if necessary.
- Use a chair with a back and adjust it to support your lower back comfortably.
- Sit straight so that your knees, hips and elbows form approximately 90-degree angles when you are working.
- Take periodic breaks if you are using the computer for long periods of time.

Remember to:
- Alter your posture frequently.
- Stretch and exercise your body several times a day.
- Take periodic breaks when you work at the computer for long periods of time. Frequent and short breaks are better than fewer and longer breaks.
Lighting

Proper lighting and a comfortable viewing angle can reduce eye strain and shoulder and neck muscle fatigue.

- Position the display to avoid glare or reflections from overhead lighting or outside sources of light.
- Keep the display screen clean and set the brightness and contrast to levels that allow you to see the screen clearly.
- Position the display directly in front of you at a comfortable viewing distance.
- Adjust the display-viewing angle to find the best position.

LCD Screen Care

To prevent image persistence on LCD monitors (caused by the continuous display of graphics on the screen for an extended period of time) take the following precautions:

- Set the Windows Power Plans to turn the screen off after a few minutes of screen idle time.
- Use a rotating, moving or blank screen saver (this prevents an image from being displayed too long).
- Rotate desktop background images every few days.
- Turn the monitor off when the system is not in use.

LCD Electro-Plated Logos

Note that in computers featuring a raised LCD electro-plated logo, the logo is covered by a protective adhesive. Due to general wear and tear, this adhesive may deteriorate over time and the exposed logo may develop sharp edges. Be careful when handling the computer in this case, and avoid touching the raised LCD electro-plated logo. Avoid placing any other items in the carrying bag which may rub against the top of the computer during transport. If any such wear and tear develops contact your distributor/supplier.

Chapter 1: Quick Start Guide

Overview

This Quick Start Guide is a brief introduction to the basic features of your computer, to navigating around the computer and to getting your system started. The remainder of the manual covers the following:

- **Chapter 2**  A guide to using some of the main features of the computer e.g. the storage devices (SSDs, Multi-in-1 card reader), TouchPad & Mouse & Audio.
- **Chapter 3**  The computer’s power saving options.
- **Chapter 4**  The installation of the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems.
- **Chapter 5**  An outline of the computer’s built-in software or BIOS (Basic Input Output System).
- **Chapter 7**  A quick guide to the computer’s PC Camera, Wireless LAN, Combo Bluetooth & WLAN, TPM (security) and Intel modules (some of which may be optional depending on your purchase configuration).
- **Chapter 7**  A troubleshooting guide.
- **Appendix A**  Definitions of the interface, ports/jacks which allow your computer to communicate with external devices.
- **Appendix B**  Information on Control Center.
- **Appendix C**  Information on the Video driver controls.
- **Appendix D**  The computer’s specification.
1 - 2 Overview

Raptor XI Portable Workstation

Quick Start Guide

Advanced Users
If you are an advanced user you may skip over most of this Quick Start Guide. However you may find it useful to refer to “What to Install” on page 4 - 1 and “BIOS Utilities” on page 5 - 1 in the remainder of the User’s Manual. You may also find the notes marked with a of interest to you.

Beginners and Non-Advanced Users
If you are new to computers (or do not have an advanced knowledge of them) then the information contained in the Quick Start Guide should be enough to get you up and running. Eventually you should try to look through all the documentation (more detailed descriptions of the functions, setup and system controls are covered in the remainder of the User’s Manual), but do not worry if you do not understand everything the first time. Keep this manual nearby and refer to it to learn as you go. You may find it useful to refer to the notes marked with a as indicated in the margin. For a more detailed description of any of the interface ports and jacks see “Interface (Ports & Jacks)” on page A - 1.

Warning Boxes
No matter what your level please pay careful attention to the warning and safety information indicated by the symbol. Also please note the safety and handling instructions as indicated in the Preface.
Not Included
Operating Systems (e.g. Windows 10) and applications (e.g. word processing, spreadsheet and database programs) have their own manuals, so please consult the appropriate manuals.

Drivers
If you are installing new system software, or are re-configuring your computer for a different system, you will need to install the drivers listed in “Drivers & Utilities” on page 4 - 1. Drivers are programs which act as an interface between the computer and a hardware component e.g. a wireless network module. It is very important that you install the drivers in the order listed. You will be unable to use most advanced controls until the necessary drivers and utilities are properly installed. If your system hasn’t been properly configured (your service representative may have already done that for you); refer to Chapter 4 for installation instructions.

Ports and Jacks
See “Interface (Ports & Jacks)” on page A - 1 for a description of the interface (ports & jacks) which allow your computer to communicate with external devices, connect to the internet etc.

Model Differences
This notebook series includes some different model designs, based on specification, and these may vary slightly in appearance. Note that though your computer may look slightly different from that pictured throughout this manual, all ports, jacks (other than those indicated in the specification) and general functions are the same for all the design styles (see Appendix D for further details).
Quick Start Guide

System Startup

1. Remove all packing materials, and place the computer on a stable surface, and securely attach any peripherals you want to use with the notebook (e.g. keyboard and mouse) to their ports.

2. **When first setting up the computer use the following procedure** (as to safeguard the computer during shipping, the battery will be locked to not power the system until first connected to the AC/DC adapters and initially set up as below):
   - Attach the AC/DC adapter cords to the DC-In jacks on the rear of the computer then plug the AC power cords into an outlet, and connect the AC power cords to the AC/DC adapters (in the adapter stand) and the battery will now be unlocked.

3. Use one hand to raise the lid/LCD to a comfortable viewing angle (do not exceed 130 degrees); use the other hand to support the base of the computer (Note: Never lift the computer by the lid/LCD).

4. Press the power button on the top of the computer for about 2 - 3 seconds to turn the computer “on” (note that the power LED on the front of the computer will turn from orange to green when the computer powers on).

---

**Shutdown**

Note that you should always shut your computer down by choosing the Shut Down command in Windows (see page 1 - 32). This will help prevent hard disk or system problems.

*Figure 1 - 1 - Opening the Lid/LCD & AC/DC Adapters Plugged-In*
System Software

Your computer may already come with system software pre-installed. Where this is not the case, or where you are re-configuring your computer for a different system, you will find the Windows 10 (64-bit) operating system is supported.

Windows OS

Note that the information included on the following pages is for Windows 10 only.

In order to run Windows 10 (64-bit) your computer requires a minimum 8GB of system memory (RAM).

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices (e.g. WLAN, Bluetooth or 3G/4G) aboard aircraft is usually prohibited. Make sure any wireless modules are OFF (i.e. the system is in Airplane Mode) if you are using the computer aboard aircraft.

Use Fn + F11 Airplane Mode key combination to toggle Airplane Mode On/Off.
LED Indicators

The LED indicators at the front of the computer display helpful information about the current status of the system.

Illuminated Color LED Keyboard

The illuminated colored keyboard has an embedded numerical keypad for easy numeric data input, and features function keys to allow you to change operational features instantly. See Table 1 - 4, on page 1 - 11 for full function key combination details.

Other Keyboards

If your keyboard is damaged or you just want to make a change, you can use any standard USB keyboard. The system will detect and enable it automatically. However special functions/hot-keys unique to the system’s regular keyboard may not work.

Special Characters

Some software applications allow the number-keys to be used with Alt to produce special characters. These special characters can only be produced by using the numeric keypad. Regular number keys (in the upper row of the keyboard) will not work. Make sure that NumLk is on.

Control Center

Run the Control Center from the Windows Start menu or use the Fn + Esc key combination, or double-click the icon in the notification area of the taskbar. The Control Center provides quick access to Power Modes, Fan settings and LED Keyboard configuration (see Appendix B).
Flexikey® Application

The Flexikey® application is a quick hotkey configuration application, which allows you to assign a single key to launch multiple key combinations, to create text macros and to disable certain keys. The application can also be used to configure the mouse buttons to create hotkeys for gaming etc. Click Flexikey in the Control Center or Start menu to launch the application (see Appendix B for full details).

Overheating
To prevent your computer from overheating, make sure nothing blocks the vent(s)/fan intake(s) while the computer is in use.

Mini DisplayPort Cables
When using cables connected to the Mini DisplayPort, try to make sure that the cables are not bent excessively, as bending the cables may cause signal problems.

Light Bar
This system features an LED light bar, and this can be configured from the Control Center (see “LED Light Bar” on page B - 13).
AC/DC Adapter Stand

The system is designed to be supplied with power by using both AC/DC adapters supplied. Use only the AC/DC adapters that come with your computer. The wrong type of AC/DC adapter will damage the computer and its components.

The AC/DC adapters can be stored in the stand supplied, but can only be orientated one way as indicated in picture below. Insert the adapters with the open end for the power cord facing the 280W logo.

2. Powered USB 3.2 Gen 2 (Type A) Port
3. Vent/Fan Intake
4. Security Lock Slot

USB Ports

Note that the connections to the USB ports only fit one way, do not force them.

Powered USB Port

Note that the powered USB 3.2 (Type A) port is not operational under DOS and does not support wake on USB. The powered USB 3.2 (Type A) port can supply power (for charging devices only, not for operating devices) when the system is off but still powered by the AC/DC adapter plugged into a working outlet, or powered by the battery with a capacity level above 20% (this may not work with certain devices). Toggle power to this port by using **Fn + power button**.

USB Ports

USB 3.2 (Gen 2) ports are capable of 10Gbps (SuperSpeed USB 10Gbps).

There are three USB 3.2 Gen 2 (Type A) ports on this computer model (including the powered USB port) and there is one USB 3.2 Gen 2 (Type C) port. The Type C ports are the smaller sized USB ports, and the larger USB Type A ports are denoted by their blue color.
Thunderbolt Port Devices
If your purchase option includes a Thunderbolt port note the following:
When plugging a device into a Thunderbolt port allow 30 seconds for the system to scan and recognize the connected device.
Double-click the Thunderbolt Control Center in the Start menu.

Ejecting Thunderbolt Devices
In order to prevent system problems make sure you do not simply pull the cable out from the Thunderbolt port. The hardware must be ejected safely:

1. Go to the notification area of the taskbar in and click on the Safely Remove Hardware and Eject Media icon.
2. Click on Eject “Thunderbolt Device Name”.
3. When you see the “Safe to Remove Hardware” message you can remove the cable after about 20 seconds, to make sure that it is safe to eject the device.

**Overheating**

To prevent your computer from overheating make sure nothing blocks the vent(s)/fan intake(s) while the computer is in use.

**Multi-in-1 Card Reader**

The card reader allows you to use the most popular digital storage card formats:

- MMC (MultiMedia Card) / RSMMC
- SD (Secure Digital) / Mini SD / SDHC / SDXC (up to UHS-III)

**USB Ports**

USB 3.2 (Gen 2) ports are capable of 10Gbps (SuperSpeed USB 10Gbps).

There are three USB 3.2 Gen 2 (Type A) ports on this computer model (including the powered USB port) and there is one USB 3.2 Gen 2 (Type C) port. The Type C ports are the smaller sized USB ports, and the larger USB Type A ports are denoted by their blue color.
Combination Audio Jacks

Note that the combination audio jacks can support a microphone, headphone, S/PDIF device or headset (i.e. a combination microphone/headphone).

1. When a device is plugged in to the combination audio jack a dialog ("Which device did you plug in?") box will pop-up.

```
Which device did you plug in?

2. Select the appropriate device from the drop-down menu according to the device plugged-in (e.g. Headset), and then click OK to save the setting.

Super X-Fi Headphone Holography Notes

This system features Super X-Fi headphone holography uses computer audio technology to capture the listening experience of a high-end multi-speaker system in your headphones/headset. See “Super X-Fi Headphone Holography Notes” on page 7 - 17.

Bottom Cover Removal Warning
Do not remove any cover(s) and/or screw(s) for the purposes of device upgrade as this may violate the terms of your warranty.
If you need to replace/remove the SSD/HDD/RAM etc., for any reason, please contact your distributor/supplier for further information.

Overheating
To prevent your computer from overheating make sure nothing blocks the vent(s)/fan intake(s) while the computer is in use.

Battery Information
Always completely discharge, then fully charge, a new battery before using it. Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.
Windows 10 Start Menu

Most of the apps, control panels, utilities and programs within Windows 10 can be accessed from the Start Menu by clicking the icon in the taskbar in the lower left corner of the screen (or by pressing the Windows Logo Key on the keyboard). The Start Menu will contain a number of apps, and many more will be installed as you add more applications etc. Not all of these apps may fit on the screen so you can use the scroll bar to move up and down the screen.

Figure 1 - 11 - Windows Start Menu
Quick Start Guide

Right-Clicking the Windows Logo In Start Menu

Right-click the Start Menu icon (or use the Windows Logo Key + X key combination) to bring up an advanced Context Menu of useful features such as Apps and Features, Power Options, Task Manager, Search, File Explorer, Device Manager, Computer Management and Network Connections etc.

Figure 1 - 12 - Right-Click Windows Logo in Start Menu
Pining/Unpinning Apps & Programs to/from the Start Menu
To make things easy to find you can add and remove tiles for apps and programs to the Start Menu. Right-Click on a program’s icon and select **Pin to Start** from the drop-down menu. To remove an app or program from the Start Menu right-click the icon and select **Unpin from Start**. You can use the same method to **pin apps/programs to/from the taskbar** (select pin to taskbar/unpin this program from the taskbar).

*Figure 1 - 13 - Pin to Start/Unpin from Start*
Windows 10 Control Panel

In many instances throughout this manual you will see an instruction to open the Control Panel. The Control Panel can be accessed in a number of ways in Windows 10.

- Select Control Panel under the Windows System item in the Start Menu.

- Type Control Panel into the Search box in the taskbar and click on the icon when it pops up.

- You can pin the Control Panel tile to Start or taskbar.

Figure 1 - 14 - Windows 10 Control Panel Access
Settings

The **Settings** item in the Start Menu (and also as an App) gives you quick access to a number of system settings control panels allowing you to adjust settings for System, Devices, Network & internet, Personalization, Apps, Accounts, Time & language, Gaming, Ease of Access, Privacy and Update & security.

*Figure 1 - 15 - Settings*
Windows 10 Taskbar

In many instances throughout this manual you will see an instruction to access the notification area of the taskbar. The notification area of the taskbar is in the bottom right of the screen. Some of the Control Panels and applications referred to throughout the course of this manual can be accessed from here.

You can pin/unpin apps to/from the taskbar in much the same way as you can to the Start screen (see “Pining/Unpinning Apps & Programs to/from the Start Menu” on page 1 - 23).
**Action Center**

The **Action Center** appears as a vertical panel on the right side of the screen (click **Expand** to view the full panel) when you swipe in from the right or click the button in the notification tray. This gives you access to commonly needed functions like Network, All Settings, Airplane Mode, and Project etc. The Action Center also contains a **Brightness** slider when expanded.

*Figure 1 - 17 - Action Center*
Quick Start Guide

Video Features

You can switch display devices, and configure display options, from the Display settings (click the Start Menu and click Settings > System or right-click the desktop and select Display settings) control panel (see over). In Windows 10 it is possible to quickly configure external displays from the Project menu (press the Windows logo key on your keyboard and the P key or Fn + F7).

To Configure Displays using Project

1. Attach your display to the appropriate port, and turn it on.
2. Press the Ctrl + P (or Fn + F7) key combination.
3. Click on any one of the options from the menu to select PC screen only, Duplicate, Extend or Second screen only.
4. You can also click Connect to a wireless display at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.

Configuring External Displays

You can use the System (in Settings) control panel or the Ctrl + P (or Fn + F7) key combination, to configure an external display.

You can also use the NVIDIA control panel to configure the external displays.

Figure 1 - 18 - Project (Devices)
To access the **Display Settings**:

1. You can quickly adjust the display by right-clicking the desktop and selecting **Display Settings**.
2. Adjust the settings for **Brightness and color**, **Scale and layout**, **Resolution** and **Orientation** from the menus.
3. When and external display is attached you can arrange the display configuration from the **Multiple Displays** menu, and arrange the configuration from **Select and rearrange displays**.
4. Click **Apply** to save any changes made.

Quick Start Guide

To access the **NVIDIA Control Panel**:  

1. Access the **NVIDIA Control Panel** from the **Start** menu in **Windows** (or right-click the desktop and select **NVIDIA Control Panel**).
Minimum Screen Resolution Settings

1. *Windows 10* has minimum screen resolution requirements.
2. Right-click a blank area of the Desktop and select **Display Settings**.
3. Adjust the **Display Resolution** to make sure that it is at least 1024 * 768, although preferably 1366 * 768 or above.

Power Options

Power Options (Hardware and Sound) can be accessed from the Control Panel. The Power button item in Start Menu (or the context menu) may be used to Shut down or Restart (you can also add Hibernate/Sleep to the menu - see page 1 - 33). To fully control all the power options (including Hibernate mode) go to the Power Options control panel and configure the power button, sleep button and lid to perform the function selected.

Using the Power Button
1. Go to the Start Menu.
2. Click the Power button.
3. Select the power state required from the menu.

![Figure 1 - 21 - Shut Down/Restart](image)
You can also use the context menu (right-click the Start Menu icon or press the Windows logo + X key combination) to **Sign out, Sleep, Hibernate, Shut down, and Restart**.

**Figure 1 - 22 - Context Menu Shut Down or sign out**

### Adding Hibernate/Sleep to the Power Men

1. Go to the **Power Options (Hardware and Sound)** control panel (or go to **Windows Settings > Power & sleep > Additional power settings**).
2. Click **Choose what the power buttons do**.
3. Click "Change settings that are currently unavailable".
4. Click to put a check in the **Hibernate/Sleep** box under **Shutdown settings**.
5. Click **Save Changes** and close the control panel.

### Ctrl + Alt + Delete Key Combination

You can use the **CTRL + ALT + DEL** key combination to bring up a full-screen displaying **Lock, Sign out, Change a password, Task Manager and Switch User**. If you click the **Power** icon in the lower right corner of the screen a power management option menu appears to display **Sleep, Hibernate, Shut down, and Restart**.
Chapter 2: Features & Components

Overview

Read this chapter to learn more about the following main features and components of the computer:

- Solid State Drive
- Multi-in-1 Card Reader
- Touchpad and Buttons/Mouse
- Realtek Audio Console
Solid State Drive

The solid state drive (SSD) is used to store your data in the computer. The SSD can be taken out to accommodate other SSDs (see “Storage” on page D - 2 for specification information), however you will need to contact your distributor/supplier to do this in order to avoid violating the terms of your warranty.

Bottom Cover Removal Warning

Do not remove any cover(s) and/or screw(s) for the purposes of device upgrade as this may violate the terms of your warranty.

If you need to replace/remove the hard disk for any reason, please contact your distributor/supplier for further information.
Features & Components

Multi-in-1 Card Reader

The card reader allows you to use some of the latest digital storage cards. Push the card into the slot and it will appear as a removable device, and can be accessed in the same way as your hard disk(s). Make sure you install the Card Reader driver (see “Card Reader” on page 4-9).

- MMC (MultiMedia Card) / RSMMC
- SD (Secure Digital) / Mini SD / SDHC / SDXC Up to UHS-III

Note: Some of these cards require PC adapters that are usually supplied with the cards.

Push-Push Card Reader

The card reader features a push-in/push-out card insertion and ejection mechanism. Simply push the card to insert and eject it, however Ms Duo cards require an adapter.

Features & Components

Touchpad and Buttons/Mouse

The Touchpad is an alternative to the mouse; however, you can also add a mouse to your computer through one of the USB ports. The Touchpad buttons function in much the same way as a two-button mouse.

Touchpad Sensitivity

The mouse button zones at the bottom of the pad measure about 15mm from the bottom of the pad, and the left and right buttons are divided roughly down the middle. Press the left button zone for a left click, and right button zone for a right click action. Note that the Touchpad and Buttons valid operational area is that indicated within the red dotted lines below.

Mouse Driver

If you are using an external mouse your operating system may be able to auto-configure your mouse during its installation or only enable its basic functions. Be sure to check the device’s user documentation for details.
Mouse Properties Control Panel

You can configure the functions from the Mouse control panel in Windows as follows.

1. Right-click the Start Menu icon.
2. Select Control Panel.
3. Click Mouse (Hardware and Sound > Devices and Printers).
4. Click the menu headings tabs to adjust your mouse preferences.

Disabling the Touchpad

If you need to disable the Touchpad for any reason (e.g. you may find that when using the computer’s internal keyboard you accidentally trigger the Touchpad when resting your wrists or palms on it) you can do so by using Fn + F1 key combination.

Mouse & Touchpad Devices

You can configure the functions from the **Mouse** or **Touchpad** control panels in **Devices** in the **Settings** control panel as follows.

Features & Components

Touchpad Taps

The Touchpad Sensitivity feature helps prevent recognizing taps on the pad by accident, by recognizing when your palm is resting on it or brushing its surface while you are typing.

Click in the check box to enable/disable the different gestures or taps on the surface of the pad to perform specific actions to manipulate documents, objects and applications.

Click to enable/disable the two finger scrolling and pinch zooming gesture.

The two-finger scrolling feature works in most scrollable windows and allows you to scroll horizontally and vertically. Place two fingers, slightly separated, on the Touchpad surface and slide both fingers in the direction required (in a straight continuous motion).

The two-finger pinch to zoom gesture can be used to perform the same function as a scroll wheel in Windows applications that support CTRL + scroll wheel zoom functionality. Place two fingers on the pad (for best results use the tips of the fingers) and slide them apart to zoom in, or closer together to zoom out.
The **three-finger** and **four-finger swipes** and **taps** can be configured for a number of different functions. Select the appropriate function from the drop-down menu.

Realtek Audio Console

You can configure the audio options on your computer from the Sound control panel in Windows, or from the Realtek Audio Console Windows Start menu. Make sure you have installed the driver and checked the Microsoft Store for updates (see “Audio” on page 4-10) and install the Sound Blaster driver (see “Sound Blaster Audio” on page 6-54). The volume may also be adjusted by means of the volume icon in the taskbar or the audio slider in the Settings menu (see sidebar). See also “Super X-Fi Headphone Holography Notes” on page 7-17.
Realtek Audio Console - Main
You can adjust the Speaker and Microphone levels by using the sliders in the Realtek Audio Console Main window.

Chapter 3: Power Management

Overview

To conserve power, especially when using the battery, your computer power management conserves power by controlling individual components of the computer (the monitor and hard disk drive) or the whole system. This chapter covers:

- The Power Sources
- Turning On the Computer
- Power Plans
- Power-Saving States
- Configuring the Power Buttons
- Battery Information

The computer uses enhanced power saving techniques to give the operating system (OS) direct control over the power and thermal states of devices and processors. For example, this enables the OS to set devices into low-power states based on user settings and information from applications.

OS Note

Power management functions will vary slightly depending on your operating system. For more information it is best to refer to the user's manual of your operating system.
The Power Sources

The computer can be powered by either the 2 AC/DC adapters or a battery pack.

AC/DC Adapters

Use only the AC/DC adapters that come with your computer. The wrong type of AC/DC adapter will damage the computer and its components.

1. **When first setting up the computer use the following procedure** (as to safeguard the computer during shipping, the battery will be locked to not power the system until first connected to the AC/DC adapters and initially set up as below):
   - Attach the AC/DC adapter cords to the DC-In jacks on the rear of the computer then plug the AC power cords into an outlet, and connect the AC power cords to the AC/DC adapters (in the adapter stand) and the battery will now be unlocked.

2. Raise the lid/LCD to a comfortable viewing angle.
3. Press the power button to turn “On”.

**Figure 3-1**

ACDC Adapters

Forced Off

If the system “hangs”, and the Ctrl + Alt + Del key combination doesn’t work, press the power button for 4 seconds, or longer, to force the system to turn itself off.
Adapter Notes
This computer is designed to be powered by the 2 AC/DC adapters supplied. When the computer is powered by the dual adapters the system will be in its highest performance mode.

If the system is being powered by a single adapter, note the following:
1. When the battery level is less than 10%, the system will not start if powered by one Adapter only.
2. If a battery is not installed, the system will not start.
3. The Battery LED will not light up when the system is off or when it starts.
4. The overall system performance will be equivalent to the system in DC (battery powered) mode.
5. Although powered by a single adapter the battery will not charge.
6. As the adapter is powered separately, the battery will not be charged, and the operating system will show the capacity unchanged.
7. When the battery is low, and the low battery beep sound is being played, the system will continue to do so and will not enter a power-saving state.

Battery
The battery allows you to use your computer while you are on the road or when an electrical outlet is unavailable. Battery life varies depending on the applications and the configuration you're using. To increase battery life, let the battery discharge completely before recharging (see “Battery FAQ” on page 3 - 22).

We recommend that you do not remove the battery. For more information on the battery, please refer to “Battery Information” on page 3 - 17.
Turning On the Computer

Now you are ready to begin using your computer. To turn it on simply press the power button on the front panel.

When the computer is on, you can use the power button as a Stand by/Hibernate/Shutdown hot-key button when it is pressed for less than 4 seconds (pressing and holding the power button for longer than this will shut the computer down). Use Power Options (Hardware and Sound) in the Windows control panel to configure this feature.

Power Button as Stand by or Hibernate Button

You can use the OS's "Power Options" control panel to set the power button to send the system into Stand by or Hibernate mode (see your OS's documentation, or "Configuring the Power Buttons" on page 3 - 10 for details).
Power Management

Shutting the Computer Down

Note that you should always shut your computer down by choosing the **Shut down** command as this will help prevent hard disk or system problems. Use the **Power** item in the **Start Menu** and select **Shut down**.

You can also use the context menu (right-click the Start Menu icon or press the Windows logo + X key combination) to **Sign out**, **Sleep**, **Hibernate**, **Shut down**, and **Restart**.

If you want to add Hibernate/Sleep to the Power Menu see "Adding Hibernate/Sleep to the Power Menu" on page 3 - 11.

![Figure 3 - 2](image)

**Shut Down/Restart**
Power Plans

The computer can be configured to conserve power by means of power plans (Control Panel > Power Options). You can use (or modify) an existing power plan, or create a new one.

The settings may be adjusted to set the display to turn off after a specified time, and to send the computer into Sleep after a period of inactivity.

Click Change plan settings and then click Change advanced power settings to access further configuration options in Advanced Settings.

See Table 3 - 1, on page 3 - 12 for information on how to resume from a power-saving state.

It is recommended that you enable a password on system resume in order to protect your data.

Figure 3 - 3
Power Plan Advanced Settings
Each Windows power plan will also adjust the processor performance of your machine in order to save power. This is worth bearing in mind if you are experiencing any reduced performance (especially under DC/battery power).

Choose High performance (you may need to click Show additional plans to view the High performance plan) for maximum performance when the computer is powered from an AC power source. Choose the Power saver (bear in mind that this scheme may slow down the overall performance of the computer in order to save power) for maximum power saving when the computer is battery (DC power) powered.

Figure 3 - 4
Power Plans
Power Management

Power-Saving States

You can use power-saving states to stop the computer’s operation and restart where you left off. *Windows 10* uses the **Sleep**, **Hibernate** and **Shut Down** power-saving states.

**Sleep**

In **Sleep** all of your work, settings and preferences are saved to memory before the system sleeps. When you are not using your computer for a certain length of time, which you specify in the operating system, it will enter **Sleep** to save power.

The PC wakes from **Sleep within seconds** and will return you to where you last left off (what was on your desktop) without reopening the application(s) and file(s) you last used.

If your mobile PC in **Sleep** is running on battery power the system will use only a minimum amount of power. After an extended period the system will save all the information to the hard disk and shut the computer down before the battery becomes depleted.

To add **Sleep** to the **Power Menu** see “Adding Hibernate/Sleep to the Power Menu” on page 3 - 11.
Hibernate

Hibernate uses the least amount of power of all the power-saving states and saves all of your information on a part of the hard disk before it turns the system off. If a power failure occurs the system can restore your work from the hard disk; if a power failure occurs when work is saved only to memory, then the work will be lost. Hibernate will also return you to where you last left off within seconds. You should put your mobile PC into Hibernate if you will not use the computer for a period of time, and will not have the chance to charge the battery. To add Hibernate to the Power Menu see “Adding Hibernate/Sleep to the Power Menu” on page 3 - 11.

Shut down

You should Shut down the computer if you plan to install new hardware, plan to be away from the computer for several days, or you do not need it to wake up and run a scheduled task. Returning to full operation from Shut down takes longer than from Sleep or Hibernate.
Configuring the Power Buttons

The power/sleep button (Fn + F12 key combo) and closed lid may be set to send the computer into a power-saving state. Click Choose what the power buttons do on the left menu in Power Options to bring up the menu.

![Figure 3 - 6 Power Options Define Power Buttons](image)
Adding Hibernate/Sleep to the Power Menu

Add Hibernate/Sleep to the Power Menu as follows.

1. Go to the Power Options (Hardware and Sound) control panel.
2. Click “Change settings that are currently unavailable”.
3. Click Choose what the power buttons do.
4. Click to put a check in the Hibernate/Sleep box under Shutdown settings.
5. Click Save Changes and close the control panel.
Resuming Operation

You can resume operation from power-saving states by pressing the power button, or in some cases pressing the sleep button (Fn + F12 key combo).

**Ctrl + Alt + Delete Key Combination**

You can use the **CTRL + ALT + DEL** key combination from almost any of the *Windows 10* interfaces/Apps to bring up a full-screen displaying **Lock**, **Switch User**, **Sign out**, **Change a password** and **Task Manager** options. If you click the **Power** icon in the lower right corner of the screen a power management option menu appears to display **Sleep**, **Shut down**, and **Restart**.

![Ctrl + Alt + Delete Menu](image)

To fully control all the power options (including Hibernate mode) go to the **Power Options** control panel and configure the power button, sleep button and lid to perform the function selected.

Battery Information

Follow these simple guidelines to get the best use out of your battery.

Battery Power

Your computer’s battery power is dependent upon many factors, including the programs you are running, and peripheral devices attached. You can set actions to be taken (e.g. Shut down, Hibernate etc.), and set critical and low battery levels from power plan Change plan settings > Change advanced power settings (see Figure 3 - 4 on page 3 - 7).

Click the battery icon in the notification area to see the current battery level and charge status (you can also click Power & sleep settings to access the Settings menu to quickly adjust power settings).

Low Battery Warning

When the battery is critically low, immediately connect the AC/DC adapter to the computer or save your work, otherwise, the unsaved data will be lost when the power is depleted.

Figure 3 - 13

Battery Saver

Note that some Windows features and background applications may behave differently, or may be blocked, when the system is in Battery Saver mode (check with Microsoft for details).

Conserving Battery Power

- Use a **power plan** that conserves power (e.g. **Power saver**), however note that this may have an affect on computer performance.
- Lower the brightness level of the LCD display. The system will decrease LCD brightness slightly to save power when it is not powered by the AC/DC adapter.
- Reduce the amount of time before the display is turned off.
- Close wireless, Bluetooth, modem or communication applications when they are not being used.
- Disconnect/remove any unnecessary external devices e.g. USB devices, Cards etc.

---

**Windows Mobility Center**

The **Windows Mobility Center** control panel (select the **Control Panel** under the **Windows System** item in the **Start Menu**) provides an easy point of access for information on battery status, power plans used and wireless device status etc.

Power Management

Battery Life
Battery life may be shortened through improper maintenance. To optimize the life and improve its performance, fully discharge and recharge the battery at least once every 30 days. We recommend that you do not remove the battery yourself.

Charging The Battery Under Heavy Use
If the computer is being used under a heavy system load (e.g. games or other high-end graphic apps) in battery mode, try to avoid a cycle of repeatedly plugging and unplugging the adapter to charge the battery.

Repeatedly plugging and unplugging the adapter may cause inaccuracies in the battery mechanics when displaying battery life and charge, and this may result in a system shutdown despite the battery meter displaying a sufficient remaining charge.

Ideally, if the computer is being used under a heavy system load you should try to use the AC/DC adapter, but if using the battery avoid plugging and unplugging the adapter and allow the battery to fully charge again before switching to battery mode.

New Battery
Always completely discharge, then fully charge, a new battery (see “Battery FAQ” on page 3 - 22 for instructions on how to do this).
Recharging the Battery with the AC/DC Adapters

The battery pack automatically recharges when the AC/DC adapters are attached and plugged into an electrical outlet. If the computer is powered on, and in use, it will take several hours to fully recharge the battery. When the computer is turned off but plugged into an electrical outlet, battery charge time is less. Refer to “LED Indicators” on page 1 - 7 for information on the battery charge status, and to “Battery FAQ” on page 3 - 22 for more information on how to maintain and properly recharge the battery pack.

Proper handling of the Battery Pack

- DO NOT disassemble the battery pack under any circumstances
- DO NOT expose the battery to fire or high temperatures, it may explode
- DO NOT connect the metal terminals (+, -) to each other

Damaged Battery Warning

Should you notice any physical defects (e.g. the battery is bent out of shape after being dropped), or any unusual smells emanating from the notebook battery, shut your computer down immediately and contact your distributor/supplier. If the battery has been dropped we do not recommend using it any further, as even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire. It is recommended that you replace your computer battery every two years.
Battery FAQ

How do I completely discharge the battery?
Use the computer with battery power until it shuts down due to a low battery. Don’t turn off the computer even if a message indicates the battery is critically low, just let the computer use up all of the battery power and shut down on its own.

1. Save and close all files and applications.
2. **Create a power plan** for discharging the battery and set all the options to **Never**.
3. Click **Change plan settings** (after creating it) and click **Change plan settings > Change advanced power settings**.

![Change Plan Settings / Change Advanced Power Settings](image)
4. Scroll down to **Battery** and click + to expand the battery options.

5. Choose the options below (click **Yes** if a warning appears):

- Low battery level = 0%
- Critical battery level = 1%
- Low battery action = Do Nothing
- Reserve Battery Level = 0%

---

*Figure 3 - 16
Power Options
Advanced Settings - Battery*
Power Management

How do I fully charge the battery?
When charging the battery, don’t stop until the LED charging indicator light changes from orange to green.

How do I maintain the battery?
Completely discharge and charge the battery at least once every 30 days or after about 20 partial discharges.
Removing the Battery

We recommend that you do not remove the battery yourself. If you do need to remove the battery for any reason (e.g. long term storage) see below.

1. Turn the computer off, and carefully turn it over.
2. Slide the latch 1 in the direction of the arrow.
3. Slide the latch 2 in the direction of the arrow, and hold it in place.
4. While holding the latch 2 in place, slide the battery out from point 3 in the direction of the arrow 4.
5. Remove the battery.

Bottom Cover Removal Warning
Do not remove any cover(s) and/or screw(s) for the purposes of device upgrade as this may violate the terms of your warranty.

If you need to replace/remove the hard disk/RAM/optical device etc., for any reason, please contact your distributor/supplier for further information.

Inserting the Battery

1. Orientate the battery as illustrated below and align the battery with the edges of the battery compartment.
2. Insert it into the compartment in the direction of the arrow 1 (it should click into place).
3. Slide the latch 2 in the direction of the arrow into the lock position.

Chapter 4: Drivers & Utilities

This chapter deals with installing the drivers and utilities essential to the operation or improvement of some of the computer’s subsystems. The system takes advantage of some newer hardware components for which the latest versions of most available operating systems haven’t built in drivers and utilities. Thus, some of the system components won’t be auto-configured with an appropriate driver or utility during operating system installation. Instead, you need to manually install some system-required drivers and utilities.

What to Install

You will need to attach an external optical CD/DVD device drive to install the drivers from the *Device Drivers & Utilities + User’s Manual* disc. The disc contains the drivers and utilities necessary for the proper operation of the computer. *Table 4 - 1, on page 4 - 4* lists what you need to install and it is very important that the drivers are installed by the method outlined in this chapter, and in the order indicated. Note that the information on the following pages is for *Windows 10* (64-bit only).

Module Driver Installation

The procedures for installing drivers for the Wireless LAN, Bluetooth & WLAN Combo, Intel Technology, and Sound Blaster modules are provided in “Modules” on page 6 - 1.

Driver Installation & Power

When installing drivers make sure your computer is powered by the AC/DC adapter connected to a working power source. Some drivers draw a significant amount of power during the installation procedure, and if the remaining battery capacity is not adequate this may cause the system to shut down and cause system problems (note that there is no safety issue involved here, and the battery will be rechargeable within 1 minute).
Drivers & Utilities

Driver Installation

1. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click the message “Tap to choose what happens with this disc.”
3. Click Run autorun.exe.
4. Click Install Drivers (button), or Option Drivers (button) to access the Optional driver menu.

![Drivers Installer Screen 1](image)

*Figure 4 - 1 - Drivers Installer Screen 1*
5. Check the driver installation order from Table 4 - 1, on page 4 - 4 (the drivers must be installed in this order) which is the same as that listed in the Drivers Installer menu below.
6. Click to select the driver you wish to install, (you should note down the drivers as you install them).
7. Follow the instructions for each individual driver installation procedure as listed on the following pages.

Latest Updates
After installing all the drivers make sure you enable Check for updates (*Settings > Update & security > Check for updates*) and go to the *Microsoft Store* and click *Downloads and updates > Get updates* to update all Apps etc. See “*Windows Update*” on page 4 - 12 for instructions.
Updating/Reinstalling Individual Drivers

If you wish to update/reinstall individual drivers it may be necessary to uninstall the original driver. To do this go to the Control Panel in the Windows OS and double-click the Programs icon (Programs > Uninstall a program). Click to select the driver (if it is not listed see below) and click Uninstall, and then follow the on screen prompts (it may be necessary to restart the computer). Reinstall the driver as outlined in this chapter.

If the driver is not listed in the Programs and Features menu:

1. Go to the Control Panel).
2. Double-click Device Manager (Hardware and Sound > Devices and Printers > Device Manager).
3. Double-click the device you wish to update/reinstall the driver for (you may need to click “+” to expand the selection).
4. Click Driver (tab) and click the Update Driver or Uninstall button and follow the on screen prompts.

User Account Control

If a User Account Control prompt appears as part of the driver installation procedure, click Continue or Allow, and follow the installation procedure as directed.

Windows Security Message

If you receive a Windows security message as part of the driver installation process. Just click “Install this driver software anyway” or “Install” to continue the installation procedure.

You will receive this message in cases where the driver has been released after the version of Windows you are currently using. All the drivers provided will have already received certification for Windows.

New Hardware Found

If you see the message “New Hardware Found” during the installation procedure (other than when outlined in the driver install procedure), click Cancel to close the window, and follow the installation procedure.
Driver Installation Procedure

Insert the Device Drivers & Utilities + User’s Manual disc and click Install Drivers (button).

Chipset

Note: During the driver installation process the screen resolution may change. Make sure you restart after the driver installation process, as instructed, in order to restore the original resolution.

1. Click 1.Install Chipset Driver > Yes.
2. Click Next > Accept > Install.
3. Click Restart Now to restart the computer.

Serial IO

1. Click 2.Serial IO Driver > Yes.
2. Click Next.
3. Click the check box to accept the license and then click Next > Next > Next.
4. Click Finish.

1. Click 3.Install NVIDIA VGA Driver > Yes.
2. Click AGREE AND CONTINUE (button) to accept the terms of the license agreement.
3. Click Next.
4. Click Close to complete the installation.
5. Go to the Microsoft Store to download the NVIDIA Control Panel.
6. After all the drivers have been installed (an internet connection is required) run the NVIDIA GeForce Experience by clicking the desktop icon (or app).

Note: After installing the video driver go to the Display control panel to adjust the video settings to the highest resolution.

NVIDIA Apps
1. Click 4.Install NVIDIA Apps > Yes.
2. Click AGREE AND CONTINUE (button) to accept the terms of the license agreement.
3. Click Next.
4. Click Close to complete the installation.
5. After all the drivers have been installed (an internet connection is required) run the NVIDIA GeForce Experience by clicking the desktop icon (or app).

LAN
Note: If the computer enters a deep sleep mode during installation, you will be prompted to plug in a network cable, and click OK, to continue installation. If a network cable is not available, restart the system and reinstall the LAN driver.
1. Click 5.Install LAN Driver > Yes.
2. Click OK.
3. Click Next.
4. Click the button to accept the terms of the license agreement and then click Next.
5. Click Next > Install.
6. Click Finish.
7. You can then download the Killer Control Center app from the Microsoft Store but you
will need to have a working internet connection.
8. After the driver is installed an automatic browser window will pop-up and you can click the “Get” button to start the installation.
9. Alternatively click the Start menu in Windows to access the Microsoft Store app tile under Explore.
10. You can then search by typing “Killer Control Center” in the search window (click the magnifying glass icon in the top right corner of the screen) and click to install the app.
11. When just installed the Killer Control Center will appear in the Windows Start menu.

Note: The Killer Wireless LAN driver will be installed as part of the LAN driver installation process (see “Killer WLAN Combo Driver” on page 6 - 17).

7. Click the Start menu in Windows to access the Microsoft Store app tile under Explore.
8. Click the Sign in icon and select Downloads and updates.
9. Click Check for Updates.
10. A list of apps being downloaded will pop-up.
11. To prioritize the Sound Blaster Atlas driver you can click Pause all to pause the download queue.
12. Click on Sound Blaster Atlas and click on the resume icon to download the driver.
13. When just installed the Sound Blaster Atlas will appear in the Windows Start menu.

Thunderbolt Driver
1. Click 11.Install Thunderbolt Driver > Yes.
2. Click OK > OK (make sure you click all the OK messages which pop-up) to complete the installation.

Audio
1. Click 13.Install Audio Driver > Yes.
2. Click Next.
3. Click Finish to restart the computer.
4. **Realtek Audio Control Panel** will download but you will need to have a working internet connection.

5. Click the **Start** menu in Windows to access the **Microsoft Store** app tile under **Explore**.

6. Click the **Sign in** icon and select **Downloads and updates**.

7. Click **Check for Updates**.

8. A list of apps being downloaded will pop-up.

9. To prioritize the Realtek audio driver you can click **Pause all** to pause the download queue.

10. Click on **Realtek Audio Console** and click on the resume icon to download the driver.

11. When installed the **Realtek Audio Console** will appear in the **Windows Start** menu.

After installing the audio driver the system will not return to the **Drivers Installer** screen. To install the optional drivers, eject the **Device Drivers & Utilities + User’s Manual** disc and then reinsert it (or double-click the disc icon in My Computer), and click **Option Drivers** (button) to access the optional driver menu.

It is recommended that you install the **Intel Rapid Storage Technology** driver (see “**Intel® Rapid Storage Technology**” on page 6-37 - required for AHCI, RAID & Optane mode).
After installing all the drivers make sure you enable Windows Update in order to get all the latest security updates etc. (all updates will include the latest hotfixes from Microsoft).

To enable Windows Update make sure you are connected to the internet:

1. Go to the Control Panel.
2. Click Windows Update (System and Security/Security).
3. Click Check for updates (button).
4. The computer will now check for updates (you need to be connected to the internet).
5. Click Install now (button) to begin checking for the updates.
6. Click Install updates (button) to install the updates.
Optional Drivers

See the pages indicated in *Table 4 - 1, on page 4 - 4* for the driver installation procedures for any modules included in your purchase option.

*Figure 4 - 3 - Optional Drivers Installer Screen*

*Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.*
Chapter 5: BIOS Utilities

Overview

This chapter gives a brief introduction to the computer’s built-in software BIOS (Basic Input/Output System).

If your computer has never been set up, or you are making important changes to the system (e.g. hard disk setup), then you should review this chapter first and note the original settings found in BIOS. Even if you are a beginner, keep a record of the settings you find and any changes you make. This information could be useful if your system ever needs servicing.

There is one general rule: Don’t make any changes unless you are sure of what you are doing. Many of the settings are required by the system, and changing them could cause it to become unstable or worse. If you have any doubts, consult your service representative.

To enter BIOS, turn on the computer and press F2 as the system “Boots up”.

BIOS Screens

Note that the BIOS screens pictured on these pages are intended for guidance in setting up your system’s BIOS.

BIOS versions are subject to constant change and revision, therefore your computer’s actual screens may appear slightly different from those pictured on these pages.
The Insyde BIOS Utility

Each time you turn on the computer the system takes a few seconds to conduct a including a quick test of the on-board RAM (memory).

As the boot process proceeds, the computer will tell you if there is anything wrong. If there is a problem that prevents the system from booting, it will display a system summary and prompt you to run the BIOS setup.

If there are no problems the system will load the operating system. Once that starts, you can’t get into BIOS without rebooting.

The Setup BIOS Utility tells the system how to configure itself by translating instructions from the operating system, and other software, into instructions that the computer hardware understands. manage basic features, identify installed devices and subsystems (e.g. port configuration).

**ERROR**
Incorrect settings can cause your system to malfunction. To correct mistakes, return to BIOS and Load Optimized Defaults (press F9).

**BIOS Menus**
The menus shown in this section are for reference only. Your computer’s menus will indicate the configuration appropriate for your model and options.

**BIOS and Resuming From Hibernation**
When the system resumes from Hibernation the option will be available to press F2 to enter the BIOS. In this case do not make any changes to the BIOS settings as this may result in system errors.

If you wish to change the BIOS settings, restart the system and press F2 to enter the BIOS to make and save any changes required.
Updating the BIOS / CPU

If you need to update the BIOS please contact your distributor or supplier to obtain the latest version.

After using the utility to update the BIOS (or if the CPU has been changed) you will need to press **F2 at Boot** to enter the BIOS, and then press **F9 to load the BIOS defaults**, and then **press F10 to save and exit** the settings.

After the system restarts you should press **F2** to enter the BIOS again and reset the BIOS settings to your preferences, and then save the final settings.
BIOS Utilities

UEFI Boot
UEFI (Unified Extensible Firmware Interface) is an advanced firmware standard supporting fast startup.

With UEFI Boot prompts at boot to press F2 (to access the BIOS) or F7 (to access Boot options) will not appear. However you can still press F2 to enter the setup, or F7 to choose the preferred boot device, if you press the key immediately the system boots up.

To enter BIOS, turn on the computer and press F2 as the system “Boots up”.

If the computer is already on, reboot using the Ctrl + Alt + Delete combination and then hold down F2 when prompted. The BIOS main menu will appear. To see the boot options press F7 and choose your preferred boot device.
Insyde BIOS Start Screen

On accessing the BIOS you will be presented with the Start Screen with 5 menu icons, date and time information, CPU temperature information and navigation and Help icons at the bottom of the screen.

You can use the Touchpad, an attached mouse, or the cursor/arrow keys to navigate the menus and press Enter to access the submenu.

Figure 5 - 1
Insyde BIOS Start Screen
Insyde BIOS Start Screen Options:

- **Continue**: Press *Enter* here or click *Continue* to carry on with the boot process and load the operating system.

- **Boot Manager**: Press *Enter* here or click *Boot Manager* to access the Boot Manager utility.

- **Boot From File**: Press *Enter* here or click *Boot From File* to select a file or device to Boot from.

- **Administer Secure Boot**: Press *Enter* here or click *Administer Secure Boot* to proceed with a Secure Boot process. This will take you to the Secure Boot screen which allows you to manage secure boot settings.

- **Setup Utility**: Press *Enter* here or click *Setup Utility* to access the BIOS settings in the Setup Utility.

Note to return to the Start Screen from any of the submenus press the *Esc* key.
Boot Manager

When you turn the computer on it will look for an operating system from the devices listed in this menu, and in this priority order. If it cannot find the operating system on that device, it will try to load it from the next device in the order specified in the Boot Option Menu.

Press Enter to access the menu, use the arrow keys to move up and down the menu, and press Enter to select a device.
If you need to boot from a file (e.g. on a USB flash drive) then access this menu and use the cursor keys to select the device or file (you can press Enter to explore for a file on an attached device).
Administer Secure Boot

Secure Boot prevents unauthorized operating systems and software from loading during the startup process. You can select a trusted UEFI file to execute the BIOS, make sure that you Enforce Secure Boot, Erase all Secure Boot Settings or Restore the Factory Settings.
You can also make custom changes to the Key Management database if required by accessing the advanced secure boot options for Platform Key (PK Options), Key Exchange Key (KEK Options), Allowed Signatures Database (DB Options) and Forbidden Signatures Database (DBX Options).

Figure 5-5

Setup Utility - Main Menu

Pressing Enter opens the sub-menu to show the configuration of SSDs on the computer’s SATA Ports.

SATA Port # (Main Menu)
**BIOS Utilities**

*System Time & System Date (Main Menu)*
The hour setting uses the 24-hour system (i.e., 00 = midnight; 13 = 1 pm). If you can change the date and time settings in your operating system, you will also change these settings. Some applications may also alter data files to reflect these changes.

*System/Extended Memory: (Main Menu)*
This item contains information on the system memory, and is not user configurable. The system will auto detect the amount of memory installed.

*MB Series / BIOS Revision / KBC/EC firmware Revision / MAC Address*
This item contains information on the BIOS version, network adapter address etc., and is not user configurable.
Advanced Chipset Control (Advanced Menu)
The sub-menu here allows you to enable/disable Flexicharger, GPU Performance Scaling, VT-d and UEFI OS Fast Boot.
FlexiCharger (Advanced Menu > Advanced Chipset Control)
The sub-menu here allows you to enable/disable the FlexiCharger. The FlexiCharger may be set to automatically start charging your battery when the battery reaches a certain capacity level (e.g. you could start the battery charge level at 40%).

You can then set the level to stop charging (e.g. 100%), and of course this stop charge level must be higher than the start charge level.

See the sidebar warning for information on running the FlexiCharger for an extended period as this is not recommended.

FlexiCharger Warning
If you leave the FlexiCharger continuously "Enabled" for a period of three months or more, the battery meter's reading accuracy will deteriorate.

To reset this, set the FlexiCharger to "Disabled", and then allow the battery to completely discharge (see "Battery FAQ" on page 3 - 21) before enabling the function again.

Figure 5 - 8
FlexiCharger Enabled / Disabled
GPU Performance Scaling (Advanced Menu > Advanced Chipset Control)
You can enable/disable NVIDIA GPU Performance scaling from this menu. The NVIDIA Card does the scaling if this option is on, and has less latency than the Intel GPU. This can be useful if you play games etc.

VT-d (Advanced Menu > Advanced Chipset Control)
Enable/disable Intel® Virtualization Technology for Directed I/O (VT-d) from this menu. This extends Intel's Virtualization Technology (VT) by providing hardware assists for a virtualization solution.

UEFI OS Fast Boot(Advanced Menu > Advanced Chipset Control)
Use this menu item to enable/disable the Fast Boot option, which when enabled, helps reduce the time it takes to boot the computer.

Thunderbolt(TM) Configuration (Advanced Menu)
You can enable/disable the Intel(R) Thunderbolt port support from this menu (Discrete Thunderbolt(TM) Support).
Overclocking Performance Menu (Advanced Menu) (For Some Processors Only)
This menu will be available for processors that support CPU overclocking. Click on Overclocking Performance Menu and then click on the Overclocking Feature item to enable it (it is Disabled by default) and to configure the Memory settings from the Control Center (see “Overclocking” on page B - 6).
SATA Mode (Advanced Menu)
The SATA (Serial ATA) control is configured to operate in AHCI (Advanced Host Controller Interface) mode or in Intel RST Premium With Intel Optane System Acceleration (for either RAID or Intel® Optane™) mode. Note that your system can be set up as a RAID OR to support Intel® Optane™, it cannot be set to support both systems.

The SATA Mode should be set BEFORE installing an operating system, and after you have backed up all necessary files and data (see sidebar). See “SATA Mode Setup (Optane™, RAID or AHCI)” on page 6 - 2 for details. Make sure you install the Intel Rapid Storage Technology application if you have set the SATA Mode to Intel RST Premium With Intel Optane System Acceleration (for Optane or RAID), or to AHCI (see “IRST Driver Installation” on page 6 - 38).

Intel® Optane™ Supported by IRST Driver
You do not have to set the SATA Mode to Intel RST Premium With Intel Optane System Acceleration if you install the Intel IRST driver, and setup the SATA controller to Premium mode by selecting “Switch System SATA controller to Intel® RST Premium mode (Recommended)” as part of the driver installation process (see “IRST Driver Installation” on page 6 - 38). DO NOT uninstall the driver and application after selecting Intel® RST Premium mode.
If you wish to change your SATA mode to/from AHCI/Intel RST (Optane)/RAID mode note that doing so may prevent your operating system from booting, and may require a reinstall of the OS. If you do wish to change the SATA mode then backup any necessary data on your hard disk(s) as you will need wipe the disks clean in order to prevent system problems.

**Intel Optane Options**

Intel® Optane™ is a combination of a compatible memory device and Intel Rapid Technology software. This combination is designed to speed up your system performance by caching boot data, executables, frequently accessed data and system page files to a non volatile, low latency Intel® Optane™ SSD.

- **Intel® Optane™ Memory Series** - A single Intel® Optane™ SSD automatically configured as a single volume disk, designed to speed up your system without any data storage options.

**Clearing Intel Optane**

If you need to clear Intel Optane Memory data then follow the process below, however note you will need to back up your system first as the procedure will result in the system being required to be reinstalled and data and files will be lost.

1. Go to the BIOS and select Bios setup > Advanced > Intel Rapid Storage Technology and select Intel Optane.
2. Select Disable and select Yes when prompted “Are you sure you want to disable?”
3. Select Disable and the system will clear the data.
4. The system will then return to the Intel Rapid Storage Technology menu.
Battery Low Alarm Beep (Advanced Menu)
Use this menu item to enable/disable the battery low alarm beep.
BIOS Utilities

Setup Utility - Security Menu

`Security Menu`

The changes you make here affect the access to the BIOS utility itself, and also access to your machine as it boots up after you turn it on. These settings do not affect your machine or network passwords which will be set in your software OS.

*Figure 5 - 10 Security Menu*

**Set Supervisor Password (Security Menu)**

You can set a password for access to the BIOS. This will not affect access to the computer OS (only the BIOS). An on-screen keyboard is available to assist with keyboard input.
Note: To clear existing supervisor passwords press Enter and type the existing password, then press Enter for the new password (without typing any password entry) and Enter again to confirm the password clearance. To clear a user password just click on Clear User Password.

Set User Password (Security Menu)
You can set a password for user mode access to the BIOS. This will not affect access to the computer OS, (only the Setup utility) unless you choose to set a Password on Boot (see below). Some menu items in the BIOS cannot be modified in user mode.

Note: You can only set the user password after you have set the supervisor password.

Power on Password: (Security Menu)
Specify whether or not a password should be entered to boot the computer (you may only set a Power on Password if a supervisor password is enabled). If “Enabled” is selected, only users who enter a correct password can boot the system (see the warning in the sidebar). The default setting is “Disabled”.

Password Warning
If you set a boot password (Password on boot is “Enabled”), NEVER forget your password.
The consequences of this could be serious. If you cannot remember your boot password you must contact your vendor and you may lose all of the information on your hard disk.
BIOS Utilities

TPM Configuration (Security Menu)
This sub-menu will allow you to enable/disable Trusted Platform Module (TPM) support, and to configure the TPM State. Select TPM Configuration and press Enter to access the sub-menu. Press Enter to access the Security Device Support menu and select Enable to support TPM. To reset the TPM select Clear TPM to clear existing TPM information (see “Trusted Platform Module” on page 6 - 70).

Figure 5 - 11
Security Menu

**EFI (Boot Menu)**
Press Enter to Enable/Disable any available device from which to boot under EFI.
**UEFI Setting (Boot Menu)**

The Unified Extensible Firmware Interface (UEFI) specification provides a clean interface between operating systems and platform firmware at boot time. In contrast to BIOS, UEFI defines a set of standard boot and runtime services. The **Network Stack** item can be enabled/disabled as an option under **UEFI Setting**.

![UEFI Setting](image)

*Figure 5 - 13* 
**UEFI Setting**
Click **Exit Saving Changes** (or press **F10**) to save all changes made and exit the BIOS. Choosing **Exit Discarding Changes** will wipe out any changes you have made to the **Setup** and exit the BIOS. You can also choose to **Load Optimal Defaults** (or press **F9**) to return the **BIOS** to its original state, and erase any previous changes you have made in a previous session. Select **Discard Changes** to cancel any changes made in the current session.
Chapter 6: Modules & Options

Overview

This chapter contains information on the following modules, which may come with your computer, depending on the configuration purchased. If you are unsure please contact your service representative.

- SATA Mode Setup (Optane™, RAID or AHCI)
- Wireless LAN Module
- Bluetooth & WLAN Combo Module
- Killer Control Center
- Fingerprint Reader Module
- Intel® GNA Driver
- Intel® Rapid Storage Technology
- Sound Blaster Audio
- Webcam
- Trusted Platform Module

Wireless Device Operation Aboard Aircraft

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the WLAN & Bluetooth module(s) are OFF (or the system is in Airplane Mode) if you are using the computer aboard aircraft (see Table 1 - 4, on page 1 - 11).
SATA Mode Setup (Optane™, RAID or AHCI)

Note that your system can be set up as a RAID OR to support Intel® Optane™, it cannot be set to support both systems.

AHCI Mode

Advanced Host Controller Interface (AHCI) is an interface specification that allows the storage driver to enable advanced serial ATA features such as Native Command Queuing (for maximum hard disk efficiency and performance). Make sure you install the Intel® Rapid Storage Technology application to support your HDDs/SSDs in AHCI mode (see “Intel® Rapid Storage Technology” on page 6 - 37).

Intel® Optane™

Intel® Optane™ is a combination of a compatible memory device and Intel Rapid Technology software. This combination is designed to speed up your system performance by caching boot data, executables, frequently accessed data and system page files to an non volatile, low latency Intel® Optane™ SSD. Contact your distributor or supplier to see if your system supports this technology.

RAID

To configure your RAID (Redundant Array of Independent Disks) system in Striping (RAID 0), Mirroring (RAID 1) or Parity (RAID 5) modes (see Table 6 - 1, on page 6 - 4) you will require at least two identical (see sidebar) SSDs (or three identical SSDs for RAID level 5).
Intel® Rapid Storage Technology Application

Make sure you install the Intel® Rapid Storage Technology application if you have set up your SSDs in AHCI, RAID, OR Optane™ mode (see “Intel® Rapid Storage Technology” on page 6 - 37).

After setting the SATA mode to Intel® Optane™ and installing the Intel® Rapid Storage Technology application, DO NOT uninstall the Intel® Rapid Storage Technology application.

See “RAID Setup” on page 6 - 5 or “Intel® Optane™ Setup Procedure” on page 6 - 11 for further details.

Note that your system can be set up as a RAID OR to support Intel® Optane™, it cannot be set to support both systems.
## Modules & Options

### SATA Mode Selection

The SATA mode selection should be made **before installing your operating system**. **DO NOT** change your selected SATA mode unless you intend to reinstall your operating system. Make sure you have backed up all your data before doing so.

### Solid State Drives

All solid state drives in a RAID should be identical (the same size and brand) in order to prevent unexpected system behavior.

### 6 - 4 SATA Mode Setup (Optane™, RAID or AHCI)

**Table 6 - 1**

<table>
<thead>
<tr>
<th>RAID Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAID 0</td>
<td>Identical drives reading and writing data in parallel to increase performance. RAID 0 implements a striped disk array and the data is broken into blocks and each block is written to a separate disk drive. <strong>A Striped Array (RAID 0) is NOT fault-tolerant.</strong> The failure of one drive will result in the loss of all data in the array. It is designed to increase disk performance by spreading the I/O load across the channels and drives.</td>
</tr>
<tr>
<td>RAID 1</td>
<td>Identical drives in a mirrored configuration used to protect data. Should a drive that is part of a mirrored array fail, the mirrored drive (which contains identical data) will handle all the data. When a new replacement drive is installed, data to the new drive is rebuilt from the mirrored drive to restore fault tolerance. <strong>A Mirrored Array (RAID 1) provides full data protection, as data can simply be copied from a healthy disk to a replacement for any failed disk.</strong></td>
</tr>
<tr>
<td>RAID 5</td>
<td>RAID 5 (Parity) is the <strong>most regularly used secure RAID level</strong>, and it requires at least 3 drives. RAID 5 consists of block-level striping with distributed parity so data blocks are striped across the drives and parity data is not written to a fixed drive, but is spread across all drives. Using the parity data, the computer can recalculate the data of one of the other data blocks, should that data no longer be available. A RAID 5 array can withstand a failure of a single drive so that no data is lost.</td>
</tr>
</tbody>
</table>
RAID Setup
To configure your RAID (Redundant Array of Independent Disks) system in Stripping (RAID 0), Mirroring (RAID 1) or Parity (RAID 5) modes (see Table 6 - 1, on page 6 - 4) you will require at least two identical solid state drives.

You need to setup a RAID before installing your Windows 10 operating system, and you will need to prepare the following in order to do so.

• The Microsoft Windows 10 OS DVD.
• A connected external DVD drive.
• At least two Identical solid state drives.
• The Device Drivers & Utilities + User’s Manual disc.

(see over)
1. Start up your notebook computer and press <F2> to enter the BIOS and go to the Setup Utility.
2. Select the Advanced menu.
3. Select SATA Mode (see page 5 - 17), press <Enter> and select “Intel RST Premium With Intel Optane Acceleration” and select <OK>.
4. Press <F10> to “Save and Exit” and select <Yes>.
5. As the computer restarts press <F2> to enter the BIOS again and go to the Setup Utility.
6. Go to Intel(R) Rapid Storage Technology (Advanced menu) and select “Create RAID Volume”.

**Figure 6 - 1**
Create RAID Volume
7. You can now setup your RAID volume using the installed SSDs.
8. Select “Name” and type a name of your choice for your RAID volume and select <Yes>.
9. Select RAID Level and choose the RAID Level required (see Table 6 - 1, on page 6 - 4 for details) and press <Enter>.
   • RAID0 (Stripe)
   • RAID1 (Mirror)
   • RAID 5 (Parity)
10. Go to any of the disks listed under “Select Disks:” and select a disk name.
11. Click on X to select the disk required.

12. You should select two or three identical SSDs (three SSDs are required for RAID 5) to form your RAID volume.
13. If you have selected RAID0 (Stripe) then you can adjust the “Strip Size” to (you can use the cursor to move up and down the menu selection) your requirements (it is recommended that you set the “Strip Size” to 128KB).
14. Select Create Volume (make sure you have selected your disks).
15. The system will list your RAID volume.
16. Select “Save and Exit”, and make sure the Windows 10 OS DVD is in the DVD drive, or on a USB flash drive, as the computer starts up it will automatically boot from the Windows 10 DVD or flash drive.
17. Press <F2> as the computer starts up and select Boot Manager.
18. Click to select the drive containing the Windows 10 OS.
19. Click Next > Install Now to continue installing the operating system as normal (see your Windows documentation if you need help on installing the Windows OS).
20. Follow the on-screen instructions to install the Windows 10 operating system.
21. Install the Windows drivers from the Device Drivers & Utilities + User’s Manual disc as per Table 4 - 1, on page 4 - 4 (make sure you install the Intel Rapid Storage Technology driver - see overleaf).
22. Run the Intel® Rapid Storage Technology application to manage your RAID volume as instructed in “Intel® Optane™ Memory & Storage Management Verifying RAID Volume” on page 6 - 47.
Deleting a RAID

If you wish to delete an existing RAID then follow the procedure below to do so. However backup up any necessary files and data before deleting a RAID, as doing so will result in the loss of all data on the RAID volumes.

1. Start-up your notebook computer and press <F2> to enter the BIOS.
2. Select Intel(R) Rapid Storage Technology (in the Advanced menu).
3. Select the RAID (listed under RAID Volumes:).
4. Select Delete.
5. Select “Yes” (note that all the data on the volumes will be lost).
Intel® Optane™ Setup Procedure

After initial setup make sure you install the Intel Rapid Storage Technology driver - see “IRST Driver Installation” on page 6 - 38).

You need to setup Intel® Optane™ before installing your Windows 10 operating system, and you will need to prepare the following in order to do so.

• The Microsoft Windows 10 OS on a DVD or USB flash drive.
• An Intel® Optane™ SSD installed in your system.
• The Device Drivers & Utilities + User’s Manual disc.

==========================================================

Intel® Optane™ Supported by IRST Driver

You do not have to set the SATA Mode to Intel RST Premium With Intel Optane System Acceleration if you install the Intel IRST driver, and setup the SATA controller to Premium mode by selecting “Switch System SATA controller to Intel® RST Premium mode (Recommended)” as part of the driver installation process (see “IRST Driver Installation” on page 6 - 38). DO NOT uninstall the driver and application after selecting Intel® RST Premium mode.
If you prefer to setup your Optane drive without doing so in the BIOS then you can skip the following steps 1 to 7, and start with the process of installing Windows (DO NOT forget to leave 5MB of unallocated space on the drive for acceleration as indicated in step 14). Make sure you install the IRST driver (see page 6 - 38).

1. Start-up your notebook computer and press <F2> to enter the BIOS.
2. Select Setup Utility and go to the Advanced menu.
3. Select SATA Mode (see page 5 - 17), press <Enter> and select “Intel RST Premium With Intel Optane Acceleration.”.
4. Select “Save and Exit”.
5. As the computer restarts press <F2> to enter the BIOS again.
6. Go to the Setup Utility, and go to the Advanced menu and you will now see the Intel(R) Rapid Storage Technology item. You can press <Enter> to check the information.
   (Note this item only appears after you have restarted and accessed the BIOS again after having set SATA Mode to Intel RST Premium With Intel Optane Acceleration)
7. Select “Save and Exit”, and make sure the Windows 10 OS DVD is in the DVD drive, or on a USB flash drive, as the computer starts up it will automatically boot from the Windows 10 DVD or flash drive.

8. Press <F2> as the computer starts up and select Boot Manager.

9. Click to select the drive containing the Windows 10 OS.

10. Press a key at system startup to begin installing Windows from your Microsoft Windows 10 disc.

11. Click Next > Install Now to continue installing the operating system as normal (see your Windows documentation if you need help on installing the Windows OS).

12. Select Custom: Install Windows only (advanced).

13. It is recommended that you select and then delete existing partitions.

14. Click “New” to create a partition for Windows on your system drive (leave 5MB of unallocated space on the drive for acceleration as indicated below), and you can format a disk partition for your Optane drive now, or in the Disk Management control panel in Windows (Administrative Tools) after system installation is complete.

15. Bear in mind the following when creating partitions for your system drive and your Optane drive:
   - The drive partition should be set to GPT (MBR partitions are not supported).
   - The drive type should be basic, Dynamic drives are not supported.
   - It is very important to make sure that when you create any partition, to leave at least a minimum of unallocated space of 5MB (see sidebar). This space is required for any drive that is being accelerated (System or Data Drive).

16. Follow the on-screen instructions to install the Windows 10 operating system.
17. Install the Windows drivers from the Device Drivers & Utilities + User’s Manual disc as per Table 4 - 1, on page 4 - 4 (make sure you install the Intel Rapid Storage Technology driver - see overleaf).

18. Run the Intel® Rapid Storage Technology/Intel® Optane™ Memory and Storage Management application to manage your Intel® Optane™ system as instructed in “Intel® Rapid Storage Technology” on page 6 - 37.

19. After installing the Intel® Rapid Storage Technology/Intel® Optane™ Memory and Storage Management application you can access Device Manager (right-click the Start menu and select Device Manager).

20. Click Disk drives to check the Optane drive.

21. If you need to partition a drive for Optane go to the Control Panel in Windows and click System and Security, and then click Create and format hard disk partitions (Administrative Tools).

22. Bear in mind the bulleted point information on the previous page when creating the partition (you need need to initialize the drive if necessary).
Wireless LAN Module

If your purchase option includes an Intel Combination Wireless LAN & Bluetooth module then install the driver for the appropriate module as instructed overleaf (see “Intel® WLAN Driver Installation” on page 6 - 16).

If you have included a Killer Combination Wireless LAN & Bluetooth module in your purchase configuration then the driver will already be installed as part of the LAN driver installation process (see “LAN” on page 4 - 8), however note the instructions in “Killer WLAN Combo Driver” on page 6 - 17.

Make sure that the module is on (i.e. the system is not in Airplane Mode) before installing the driver.

Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 4.

Note that you will also need to install the Bluetooth driver for the Intel and Killer modules (see “Intel & Killer Bluetooth Combo Driver Installation” on page 6 - 22).
Intel® WLAN Driver Installation

1. Make sure the system is not in Airplane Mode, and then insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 1. Install WLAN Driver > Yes.
4. Click Next.
5. Click in the check box to agree to the End User License Agreement and click Install.
6. Click Finish.
7. The operating system is the default setting for Wireless LAN control in Windows (see page 6 - 18).

Uninstalling The WLAN Driver

Note that if you need to uninstall the WLAN driver, and it does not appear in the Programs and Features control panel, you will need to do so from the Device Manager.

To uninstall the driver from Device Manager, right-click the Start Menu icon in the taskbar and select Device Manager. Right-click the WLAN device and then select "Uninstall device" (make sure to tick the box "Delete the driver software for this device") to start the process.

After the driver is uninstalled click the icon at the top of Device Manager to “Scan for hardware changes”.

Raptor XI Portable Workstation
Killler WLAN Combo Driver

The Killer wireless LAN driver will already be installed as part of the LAN driver installation process (see “LAN” on page 4 - 8), so there is no need to install the wireless LAN driver for this module. You will need to install the Bluetooth driver (see “Intel & Killer Bluetooth Combo Driver Installation” on page 6 - 22).

- Note that if you accidentally attempt to install the Killer WLAN driver you will be prompted with a “Remove the Program” pop-up window, if this is the case then click Cancel to stop the uninstall process.

The operating system is the default setting for Wireless LAN control in Windows (see page 6 - 18).

Killler Control Center App

1. You can then download the Killer Control Center app from the Microsoft Store but you will need to have a working internet connection.
2. After the driver is installed an automatic browser window will pop-up and you can click the “Get” button to start the installation.
3. Alternatively click the Start menu in Windows to access the Microsoft Store app tile under Explore.
4. You can then search by typing “Killler Control Center” in the search window (click the magnifying glass icon in the top right corner of the screen) and click to install the app.
5. When just installed the Killler Control Center will appear in the Windows Start menu.
WLAN Configuration in Windows 10

You can configure a wireless connection using one of the following options, however make sure the Wireless LAN module is turned on (and not in Airplane Mode) before configuration begins.

1. Click the Wireless icon in the notification area of the taskbar.
2. Make sure that **Airplane mode** is **off** (the Airplane mode icon should be gray).
3. A list of available access points will appear.
4. Double-click an access point to connect to it (or click it and click **Connect**).

---

**Connect Automatically**

It is recommended that you check the box to **Connect automatically**.

This will cause the system to check for the access point upon startup, and resuming from a power-saving state, and will remove any necessity to keep connecting manually.
5. Enter a network security key (password) if required, and click **Next**.
6. You can choose to share or connect to devices or not.
7. When you are connected to the network access point it will display **Connected** status.
8. Select any connected network and click **Disconnect** to disconnect from a connected access point.

---

**Wireless Device Operation Aboard Aircraft**

The use of any portable electronic transmission devices aboard aircraft is usually prohibited.

Make sure the module is either **OFF** or in **Airplane mode** if you are using the computer aboard aircraft.

---

**Figure 6 - 8**

Network Connected (Click Disconnect)
9. You can click the **Airplane Mode** button to turn the mode On or Off.
10. You need to either use **Airplane Mode**, or to **turn the WLAN module off** aboard aircraft.
11. If you click on **Network Settings** to bring up **Network & Internet** for a more comprehensive list of network and internet settings including **Wi-Fi** (can be turned on/off), **Airplane mode** (Airplane mode and Wireless devices can be turned on/off) **VPN**, **Dial-up**, **Ethernet** and **Proxy**.
Bluetooth & WLAN Combo Module

If you have included a **Wireless LAN & Bluetooth Combo module** is on (i.e. the system is not in **Airplane Mode**) before installing the driver.

Make sure you install the drivers in the order indicated in *Table 4 - 1, on page 4 - 4*. You will need to install both the WLAN and Bluetooth drivers for all the combo modules. **The Bluetooth drivers for both modules are installed as instructed overleaf.**

**Wireless Device Operation Aboard Aircraft**

The use of any portable electronic transmission devices aboard aircraft is usually prohibited. Make sure the **WLAN & Bluetooth module(s)** are OFF if you are using the computer aboard aircraft by putting the system in to **Airplane Mode** (see *Table 1 - 4, on page 1 - 11*).

---

**Bluetooth Data Transfer**

Note that the transfer of data between the computer and a Bluetooth enabled device is supported in one direction only (simultaneous data transfer is not supported). Therefore if you are copying a file from your computer to a Bluetooth enabled device, you will not be able to copy a file from the Bluetooth enabled device to your computer until the file transfer process from the computer has been completed.

---

**Note that you need to install both the WLAN & Bluetooth drivers for the WLAN & Bluetooth Combo modules.**

Intel & Killer Bluetooth Combo Driver Installation

*The Bluetooth drivers for both modules are installed as below.*

1. Make sure the system is not in Airplane Mode, and then insert the *Device Drivers & Utilities + User’s Manual* disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 2.Install Combo BT Driver > Yes.
4. Click Next.
5. Click in the check box to accept the license and click Next.
6. Select the setup type (*Typical* is recommended) and click Install.
7. Click Finish.
8. See “Bluetooth Configuration in Windows” on page 6 - 23 for configuration instructions.
Bluetooth Configuration in Windows

1. Go to the **Settings** control panel and click **Devices** (or click the Bluetooth icon in the taskbar and click **Add a Bluetooth Device**).
2. Click **Bluetooth & other devices** and make sure Bluetooth is **On**.
3. Click **Add Bluetooth or other device > Bluetooth (Add a device)** and a list of discovered devices will appear.

To Make your Computer Discoverable to Bluetooth Devices

1. Go to the **Settings** control panel and click **Devices** (or click the Bluetooth icon in the taskbar and click **Open Settings**).
2. Click **Bluetooth & other devices** and click **More Bluetooth options**.
3. In **Bluetooth Settings** make sure that **Allow Bluetooth devices to find this PC** check box (**Discovery**) has a check inside it.
4. Make sure that the **Alert me when a new Bluetooth device wants to connect** check box (**Notifications**) has a check inside it, if you want to be notified when a Bluetooth device wants to connect.

Killer Control Center

The Killer Control Center app is installed with the LAN driver (see “LAN” on page 4 - 8) for your network adapter. The Killer Control Center app can be accessed from the desktop or Apps menu. The app helps you to manage your network performance, optimize connection speed, and to control which applications are using your wireless bandwidth.

Killer Network Manager

This system contains a built-in Killer™ Ethernet controller. There is also an optional (Factory Option) Killer™ Wireless adapter available for the system.

Fingerprint Reader Module

The fingerprint reader module provides a high level of security for your computer. Make sure you have administrator’s rights to your computer, and have a *Windows* password enabled for full security protection.

There are two different fingerprint modules supplied with this model. Install the driver from the *Device Drivers & Utilities + User’s Manual* disc by following the appropriate instructions on the page overleaf.

The fingerprint reader module uses the *Sign-in options* configuration of the *Windows Account*.

**Fingerprint Reader Driver Installation**

1. Insert the *Device Drivers & Utilities + User’s Manual* disc into an attached CD/DVD drive.
2. Click *Option Drivers*.
3. Click *3.Install Fingerprint Driver > Yes*.
4. The driver will install directly.
5. The fingerprint reader module uses the *Sign-in options* configuration of the *Windows Account* (see overleaf).
Fingerprint Module Configuration

1. Click the Settings item in the Start Menu and then click Accounts and click Sign-in options.
2. You will need to add a Windows password (click Add under Password).
3. After you have added the password you will need to also add a PIN.
4. Click Set up under Windows Hello Fingerprint.
5. The wizard will then guide you through the set up process to scan your fingerprints.

PIN Code

You will be asked to add a PIN code when setting up the Fingerprint Reader. This is in addition to your Windows password.

Note this code as it may be required to help you sign-in if there are any issues with using the fingerprint reader to sign-in (see “Fingerprint Sign-In Issues” on page 6 - 35).
6. You will be instructed to **Touch the fingerprint sensor** (simply touch the sensor) on the reader a number of times (**lift and touch again**).

7. Try to present different parts of your finger in different positions (similar to the various positions you may use when using it, and if you see red at any point try a different position).

8. Click **Set up PIN** if you need to add a PIN.

9. You can choose to **Add another** finger (this is recommended) or **Remove** the current fingerprint reading.

10. You can now scan your fingerprint to log-on to the computer.

---

**Fingerprint Sign-In Issues**

If at the Windows Hello screen, the Fingerprint reader fails to recognize the fingerprint 3 times it will then block access to the computer.

**In this case you will need to use your PIN** (the PIN you used when initially setting up the fingerprint reader) to access the computer. Alternatively you can sign-in using your windows password.

After using the PIN code (or windows Password) to access the computer you can go to the **Settings > Accounts > Sign-in options** if you wish to change any settings.
Modules & Options

**Intel® GNA Driver**

Install the Intel® GNA Driver for your processor. The Intel® Gaussian & Neural Accelerator (Intel® GNA) is designed to support a small coprocessor in your system that is responsible for accelerating certain Deep Learning algorithms.

Intel® GNA is designed to offload certain continuous workloads including noise reduction or speech recognition, and therefore saves power and frees up CPU resources for overall system performance and responsiveness.

**Intel GNA Driver Installation**

1. Insert the *Device Drivers & Utilities + User’s Manual* disc into an attached DVD drive.
2. Click **Option Drivers** (button).
3. Click **4.Install GNA Driver > Yes**.
4. Click **OK** to complete the installation.
Intel® Rapid Storage Technology

The Intel® Rapid Storage Technology driver supports your AHCI mode SATA drive, or your Intel® Optane™ system. Install the Intel Rapid Storage Technology driver (after installing all necessary drivers in the correct order) to install the Intel® Optane™ Memory and Storage Management app to support your Optane system or SATA drive if set up in AHCI or Intel RST Premium With Intel Optane System Acceleration (supporting RAID) mode in the BIOS (see “SATA Mode (Advanced Menu)” on page 5 - 17). See the driver installation procedure overleaf.

Note that you can set the system to Intel® RST Premium mode to support your Intel® Optane™ system even if not enabled in the BIOS by selecting “Switch System SATA controller to Intel® RST Premium mode (Recommended)” as part of the installation process.

Note: This option will only be available if you have NOT set the SATA Mode in the BIOS to Intel RST Premium With Intel Optane System Acceleration.

IRST Premium Mode & BIOS Setting
After installing the IRST driver in Intel® RST Premium mode to support your Intel® Optane™ system, do not change the BIOS SATA Mode to AHCI as this will cause your system to stop working.
IRST Driver Installation

1. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
2. Click Option Drivers (button).
3. Click 5. Install IRST Driver > Yes.
4. Click Next.
5. Click in the check box to accept the license and click Next.
6. Click Next.
7. Next > Next.
8. Click Restart to restart the computer.
9. Run the Intel® Optane™ Memory and Storage Management application app from the Apps screen.

If you have an Optane SSD installed, and have NOT set the BIOS to Intel RST Premium With Intel Optane System Acceleration, at this point you can setup the SATA controller to Premium mode to support your Optane SSD.

To set the controller to Premium select "Switch System SATA controller to Intel® RST Premium mode (Recommended)."

Enabling Intel® Optane™

1. Run the Intel® Optane™ Memory & Storage Management application.
2. Click Enable Intel® Optane™ Memory.
3. A warning will pop up to notify you that the Optane Memory Module will be erased, and if this is OK then click Enable.

WARNING: This process will erase all data on Intel Optane™ memory module. Please back-up any data on this module before continuing.

NOTE: This process WILL NOT erase data on any other drives in your system.

NOTE: To avoid the risk of data loss, Intel Optane™ memory must be disabled before moving this device to another system.

4. The system will prepare and enable the Optane drive, and when finished you can then click **Restart**.

5. The system will then optimize the Optane Memory upon restart.

6. Run the **Intel® Optane™ Memory & Storage Management** application.

7. The system status will then be displayed.

Sound Blaster Audio

The Sound Blaster Atlas application is a suite of audio technologies which allows you to configure the audio settings to your requirements for the best performance in games, music and movies.

Make sure you have installed the Creative Sound Blaster Atlas Audio driver as instructed in “Creative Sound Blaster Atlas Audio” on page 4 - 10 (and below), and in the order indicated in Table 4 - 1, on page 4 - 4. When just installed the Sound Blaster Atlas application will appear in the Windows Start menu. See also “Super X-Fi Headphone Holography Notes” on page 7 - 17.

Creative Sound Blaster Atlas Audio

1. Before installing the driver make sure you have a working internet connection.
2. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive.
3. Click Install Drivers (button).
4. Click 10.Install Creative Driver > Yes.
5. Select the setup language and click OK.
6. Click the button to accept the license and then click Next > Next.
7. Click Install > Finish.
8. Click OK and the system will automatically restart to complete the driver installation process.

Webcam

When the Camera application is run the LED indicator to the left of the camera will be illuminated. Note that you need to use the Camera app in Windows to take pictures and capture video. Use the Fn + F10 key combination (see “Function/Hot Key Indicators” on page 1 - 11) to toggle power to the PC Camera module.

Note that you need to use the Camera app in Windows to take pictures and capture video.
Camera App

1. Make sure the Webcam is turned on by using the **Fn + F10** key combination (or **Control Center button**).
2. Run the Camera app from the Start menu by clicking on the **Camera app icon** (you can type “camera” into the search box to find the Camera app).
3. The interface displays two buttons on the right of the screen; one for photo and one for video.

4. Simply click on the appropriate button (or arrow) to switch to either photo or video modes.
5. You can use the buttons on the left of the screen to access the **Settings, HDR/Brightness** and **Photo Timer**.

**Auto or Pro Modes**

The menu buttons displayed on the left side of the screen will depend on the mode chosen in **Settings**. **Pro mode** will display the **timer and brightness** buttons, and with **Pro Mode disabled (Auto mode)** the **timer and HDR buttons** will be displayed.
6. Click **Settings** to access the camera settings menu to select/deselect **Pro mode**, make adjustments for **Framing grid**, **Photo Quality**, **Time lapse**, **Video Quality** and **Flicker reduction**.

**Camera Settings**

The **Photo Timer** can be set to take Photos after 2, 5 or 10 seconds.

You can use a **Framing grid** to help you line up pictures.

The **Photo Quality** can be changed to that which the system supports.

**Time lapse** can be set to keep taking photos until the camera button is pressed again.

The **Video Quality** resolution and frame rate can be set to any supported by the system. Note that capturing high resolution video files requires a substantial amount of disk space for each file. After recording video, check the video file size (right-click the file and select Properties) and the remaining free space on your hard disk (go to File Explorer, right-click the hard disk, and select Properties). If necessary you can remove the recorded video file to a removable medium e.g. a USB Flash drive.

If you need to reduce any screen flicker, change the settings in **Flicker reduction** to either e.g. 50Hz or 60Hz.
7. With the **Pro mode** selected (in Settings) you can access the **Brightness** button to adjust the brightness.

8. In **Auto mode** you can toggle **HDR** on or off.
Taking Pictures/Capturing Video

1. Make sure the Webcam is turned on by using the **Fn + F10** key combination (or **Control Center button**).
2. Run the Camera app from the Start menu by clicking on the **Camera** app icon (you can type “camera” into the search box to find the Camera app).
3. Click to select either **photo** or **video** modes.
4. Click the photo icon to take a picture.
5. Click on the video icon to start video capture (when video capture begins a timer will appear at the bottom of the screen).
6. To stop video capture click the stop button (you can also pause the video capture).

Trusted Platform Module

(Optional)
The TPM security chip allows you to create and manage digital certificates for user and platform authentication. This type of security is usually administered within large enterprises and organizations, and therefore requires implementation by a system administrator before users can access security features.

Make sure you have administrator’s rights to your computer, and have a Windows password enabled for full security protection. In addition Make sure you prepare a removable media (e.g. a USB flash drive) to store passwords etc. before beginning the TPM initialization process.

Before setting up the TPM functions you must enable and initialize the security platform.
Enabling & Activating TPM
1. Restart the computer.
2. Enter the BIOS pressing F2 during the POST/startup.
3. Click to enter the Setup Utility and select the Security menu.
5. You will then need to save the changes and restart the computer.

Clearing TPM Information
You can click Clear TPM, which will toggle the setting between Enabled/Disabled. If set to Enabled this will clear existing TPM information in order to reset the TPM.

TPM Actions

1. Click **Prepare the TPM** and follow the instructions in the Wizard to prepare the TPM (this will probably require a restart of the computer and confirmation of the setting changes after restart by pressing the appropriate F key).
2. After the restart the TPM will be prepared and you can then use the **Actions** menu to **Turn TPM off**, **Change Owner Password**, **Clear TPM** or **Reset TPM Lockout**.
3. A wizard will help take you through any setup steps.
BitLocker

BitLocker Drive Encryption can be used in conjunction with the TPM to encrypt data on the disk. Access the Microsoft BitLocker Drive Encryption control panel applet from the Windows control panel (System and Security).

1. Click Turn on Bit Locker.
2. Follow the on-screen instructions to setup BitLocker, and make sure you have a removable media (e.g. a USB flash drive) to store saved recovery keys etc.

Chapter 7: Troubleshooting

Overview

Should you have any problems with your computer, before consulting your service representative, you may want to try to solve the problem yourself. This chapter lists some common problems and their possible solutions. This can’t anticipate every problem, but you should check here before you panic. If you don’t find the answer in these pages, make sure you have followed the instructions carefully and observed the safety precautions in the preface. If all else fails, talk to your service representative. You should also make a record of what happened and what remedies you tried.

Of course, if something goes wrong, it will happen at the most inconvenient time possible, so you should preview this section just in case. If, after you’ve tried everything, and the system still won’t cooperate, try turning it off for a few minutes and then rebooting. You will lose any unsaved data, but it may start working again. Then call your service representative.
Basic Hints and Tips

Many of the following may seem obvious but they are often the solution to a problem when your computer appears not to be working.

- **Power** - Is the computer actually plugged into a working electrical outlet? If plugged into a power strip, make sure it is actually working. Check the LED Power & Communication Indicators (see “LED Indicators” on page 1 - 7) to see the computer’s power status.

- **Connections** - Check all the cables to make sure that there are no loose connections anywhere.

- **Power Savings** - Make sure that the system is not in Hibernate or Sleep mode by pressing the keys configured in your Power Options (see “Power-Saving States” on page 3 - 8), the Fn + F12 key combination, or power button to wake-up the system.

- **Brightness** - Check the brightness of the screen by pressing the Fn + F8 and F9 keys to adjust the brightness.

- **Display Choice** - Press Fn + F7 to make sure the system is not set to “external only” display.

- **Boot Drive** - Make sure there are no optical media and/or USB storage devices in any connected drive.
Backup and General Maintenance

- Always **backup** your important data, and keep copies of your OS and programs safe, but close to hand. Don’t forget to note the **serial numbers** if you are storing them out of their original cases, e.g. in a CD wallet.

- Run **maintenance programs** on your hard disk and OS as often as you can. You may schedule these programs to run at times when you are not using your computer. You can use those that are provided free with your OS, or buy the more powerful dedicated programs to do so.

- Write down your passwords and keep them safe (away from your computer). This is especially important if you choose to use a **Supervisor** password for the BIOS (see “The Insyde BIOS Utility” on page 5 - 2).

- Keep copies of vital **settings files** such as network, dialup settings, mail settings etc.(even if just brief notes).

---

**Warranty**

The CPU is not a user serviceable part. Opening this compartment, or accessing the CPU in any way, may violate your warranty.
**Troubleshooting**

**Viruses**

- Install an **Anti-Virus** program and keep the **definitions file** (the file which tells your program which viruses to look for) up to date. New computer viruses are discovered daily, and some of them may seriously harm your computer and cause you to lose data. **Anti-Virus** programs are commercially available and the **definitions file updates** are usually downloadable directly from the internet.

- Be careful when opening e-mail from sources you don’t know. **Viruses** are often triggered from within e-mail attachments so take care when opening any attached file. You can configure most **Anti-Virus** programs to check all e-mail attachments. **Note**: You should also beware of files from people you know as the virus may have infected an address book and been automatically forwarded without the person’s knowledge.

- Keep a “**Bootable CD-ROM/DVD-ROM/USB storage device**” (this CD/DVD/USB device provides basic information which allows you to startup your computer) handy. You may refer to your OS’s documentation for instructions on how to make one, and many **Anti-Virus** programs will also provide such a disk (or at least instructions on how to make one).
Troubleshooting

Upgrading and Adding New Hardware/Software

• Do not be tempted to make changes to your Windows Registry unless you are very sure of what you are doing, otherwise you will risk severely damaging your system.

• Don’t open your computer or undertake any repair or upgrade work if you are not comfortable with what you are doing.

• Read the documentation. We can assume, since you are reading this that you are looking at the computer’s manual, but what about any new peripheral devices you have just purchased? Many problems are caused by the installation of new hardware and/or software. Always refer to the documentation of any new hardware and/or software, and pay particular attention to files entitled “READ ME” or “READ ME FIRST”.

• When installing a new device always make sure the device is powered on, and in many cases you will need to restart the computer. Always check that all the cables are correctly connected.

• Make sure you have installed the drivers for any new hardware you have installed (latest driver files are usually available to download from vendor’s websites).
Troubleshooting

- Thoroughly check any recent changes you made to your system as these changes may affect one or more system components, or software programs. If possible, go back and undo the change you just made and see if the problem still occurs.

- Don’t over complicate things. The less you have to deal with then the easier the source of the problem may be found; Example - if your computer has many devices plugged into its ports, and a number of programs running, then it will be difficult to determine the cause of a problem. Try disconnecting all of the devices and restarting the computer with all the peripheral devices unplugged. A process of elimination (adding and removing devices and restarting where necessary) will often find the source of a problem, although this may be time consuming.

*Power Options have been disabled.* Go to the **Control Panel** in **Windows** and re-enable the options.  

*A peripheral device/USB device is consuming a lot of power.* Turn off/remove the unused device to save power. |
| The **system will not start up** when it is being operated in a **low temperature environment.** | **This is due to the electrical characteristics of battery cells at low temperatures.** Although the lowest operational temperature tolerance of the system is listed at 5°C, however if the system is in DC mode (on battery), the battery must have a remaining charge capacity of 60%+; at 10°C or above. |

| The system will not wake up from a power saving state (Sleep/Hibernate) on network activity (Wake on LAN) even though I have plugged in the powered AC/DC adapter. | *Wake on LAN is supported in AC mode only.*  
When the system enters a power saving state the plugged in AC/DC adapter should be connected, and should remain connected, in order to allow the system to wake up on network activity. Unplugging the adapter, and then plugging it back in again, will not allow the system to wake up on network activity. |
| The computer feels **too hot**.                                         | Make sure the computer is properly ventilated and the Vent/Fan intakes are not blocked. If this doesn’t cool it down, put the system into Hibernate mode or turn it off for an hour. Make sure the computer isn’t sitting on a thermal surface (see “Overheating” on page 1 - 20). Make sure you’re using the correct adapter.  
Make sure that your notebook is completely powered off before putting it into a travel bag (or any such container). Putting a notebook which is powered on in a travel bag may cause the Vent/Fan intakes to be blocked. |
| When playing a video in Media Player, while using a 4K panel, the counting timer area at the bottom of the screen appears to be cut off slightly. | *The size of text, apps and other items in Settings > System > Display is set to 250%. In this case it is recommended that the setting should be less than 250%.* |
| When you are playing a game and you use the Windows Key to switch to the desktop an error message, or Blue Screen, occurs. | *This is a DirectX compatibility issue.* In this case disable DirectX from within the game controls. |

### Troubleshooting

**Problem**

I can't hear any sound from the microphone in my connected headset, when trying to test the audio playback.

**Possible Cause - Solution**

You need to enable listening to the microphone in the audio control panel in order to hear any sound through your connected headset as follows:

1. Right-click the volume control icon in the taskbar.  
2. Select **Recording Devices**.

3. Double-click **Microphone** and select **Listen**.
4. Click to put a check in **Listen to this device** check box.
5. Click **Apply**.
6. You can then listen to the playback though the headset for testing.
7. Remember to disable this feature (remove the check from the **Listen to this device** check box) otherwise you may hear an echo from the internal microphone when you disconnect the headset.
Troubleshooting

Intel® Optane™ Notes

Intel® Optane™ is a combination of a compatible memory device and Intel Rapid Technology software. This combination is designed to speed up your system performance. However note the following;

• The **SATA Mode** should be set **BEFORE installing an operating system**, and after you have backed up all necessary files and data (see sidebar). See **“SATA Mode Setup (Optane™, RAID or AHCI)” on page 6 - 2** for details. Make sure you install the Intel Rapid Storage Technology application/Intel® Optane™ Memory and Storage Management if you have set the SATA Mode to Intel RST Premium, or to AHCI (see **“IRST Driver Installation” on page 6 - 38”).

• It is very important to make sure that when you create a hard disk drive partition when installing Windows for an **Intel® Optane™** system, that you leave at least a minimum of 5MB of unallocated space (note this is 5MB only, not GB).

• **After setting the SATA mode to Intel® Optane™** and installing the Intel® Rapid Storage Technology/Intel® Optane™ Memory and Storage Management application, **DO NOT uninstall the application**.

• If you are reinstalling a system that has previously been setup in **Intel RST Premium mode**, **make sure you have disabled the Intel Optane Memory**. If you haven’t cleared the Optane setup you may not find a suitable hard disk drive partition on which to reinstall an operating system.

• If you need to reinstall an operating system, uninstall the IRST driver/application or swap the hard disk drive (or Intel® Optane™ SSD) **make sure you have disabled the Intel Optane Memory**.
Super X-Fi Headphone Holography Notes

This system features Super X-Fi headphone holography which uses computer audio technology to capture the listening experience of a high-end multi-speaker system in your headphones/headset. However note the following:

- **When headphones/a headset are/is plugged** in to the 2-in-1 (Headphone/Microphone) audio jack, **X-Fi audio technology will be the default audio control**, and therefore the headphones/headset volume is not controllable by the Realtek Audio Console ("Realtek Audio Console" on page 2 - 14) or Sound Blaster Atlas control panel ("Sound Blaster Audio" on page 6 - 54), so make sure you use the Windows volume controls to adjust volume when using a headphone/headset.

- As super X-Fi only supported under the Windows OS, there will be **no power on boot beep** sound played through the headphones/headset at system boot.

- The **default volume level for the connected** headphones/headset is **set at 69%**. The volume level can be adjusted up or down, however if the volume level is increased above 69%, upon restart the system will revert to the 69% volume level setting. Any decrease in the volume level lower than 69% will be retained after restart.

- When headphones/a headset is unplugged the system will retain its audio output setting for the headphones/headset, therefore if you wish to output to S/PDIF you will need to change the setting manually.

Thunderbolt™ 4 Ports

This Thunderbolt 4 ports allow for the connection of external peripherals to the computer by combining PCI Express (PCIe), DisplayPort (DP), USB and its own Thunderbolt technologies. Up to seven peripherals may be supported by one connector by daisy-chaining the devices. Devices supported include HDDs/SSDs, Audio Interfaces, docks, display devices, cameras, network cables etc. The Thunderbolt ports look exactly the same as USB-C ports, and the connector is physically the same in terms of a device plug-in.

Install the driver as instructed in “Creative Sound Blaster Atlas Audio” on page 4 - 10. This will install the Thunderbolt software to your computer, and this can be accessed by clicking or double-clicking the Thunderbolt Control Center in the Start menu.

Appendix B: Control Center

Overview
The following chapter will give a quick description of the functions of the Control Center & Flexikey® applications.

Control Center
The Control Center provides quick access to Power Modes, Fan settings, LED Keyboard configuration and the Flexikey application. Click icons to access the appropriate menu, and make adjustments as applicable.

Flexikey®
The Flexikey® application is a quick hotkey configuration application, which allows you to assign a single key to launch multiple key combinations, to create text macros and to disable certain keys. The application can also be used to configure the mouse buttons to create hotkeys for gaming etc. Click Flexikey in the Control Center to launch the application.
Control Center

Run the Control Center from the Windows Start menu or double-click the icon in the notification area of the taskbar.

Figure B - 1 - Control Center & FlexiKey
Fan Speed Setting
You can access the Fan Speed Setting from the Control Center or the Windows Start menu. Set the fan speed to Maximum (full power), Automatic or Custom from this menu item. The fan speed will adjust itself automatically to control the heat of the CPU. However you can adjust the setting to maximum if you prefer. You can use the Offset slider to adjust the settings to your preference, however these settings can be overridden by the system as a safety precaution, if it requires heavier use of the fan.

The Custom setting allows you to click and drag on any of the 2 midrange nodes on the graph in order to adjust the temperature parameters of the CPU Fan or GPU Fan (click on the CPU Fan or GPU Fan icon for either on to select it, then click and drag either of the midrange nodes), then click Save to retain the setting changes.
Anti-Dust Fan Setting
This system features an anti-dust fan, which runs alternately clockwise and counter-clockwise, in order to eliminate dust from building up inside the computer. You can run the fan immediately, and adjust the schedule for when to run the fan, by clicking **Anti-Dust Fan Setting** in the Fan Speed Setting control panel and then clicking the appropriate controls.

*Figure B - 3 - Anti-Dust Fan Setting*

Power Modes

**Power Modes** allows you to adjust the power mode by clicking the appropriate icon.

- **Power Saving** mode focuses on saving battery life (the CPU Turbo Boost and dGPU Turbo will be off).
- **Quiet** mode focuses on reducing fan noise and will decrease both CPU power and GPU power.
- **Entertainment** balances CPU and GPU power and is ideal for watching videos etc.
- **Performance** mode is ideal for gaming with higher CPU and GPU performance.

**Note:** You can use the **Fn +3** key combination to quickly toggle through, and select, the Power Modes.
Control Center

Overclocking
You can access GPU or CPU overclocking by clicking the item in the Start menu or from the Control Center.

Figure B - 5 - Control Center GPU Overclocking

CPU Overclocking
Note that CPU overclocking is only supported by certain specific processors. CPU overclocking needs to be enabled in the BIOS before it can be configured in the Control Center (see “Overclocking Performance Menu (Advanced Menu)” on page 5-16). If CPU overclocking does not appear in the Control Center then your system’s processor does not support it. Contact your supplier or distributor for details.
Overclocking Issues

Note **overclocking** the system (CPU/GPU) by making alterations to clock frequency and/or voltage may cause hardware damage, reduce system stability, the useful life of the system and affect system data integrity. Therefore **overclocking** the system is **enabled at the user’s own risk**, and is **not covered in the warranty terms**.

Overclocking should only be enabled when powered by a plugged-in adapter, and not on battery power.

A warning message will appear when you have activated CPU overclocking, click **OK** to activate the changes or click **Cancel** to return to the previous settings.

![Figure B - 6 - CPU Overclocking Warning](image)

If you get any system errors, to reset the computer you can press and hold the power button to force the system to shutdown. To restart **press and hold the power button while holding down the Fn + D key combination** (for the CPU reset or **Fn + G** for the GPU reset). The overclocking settings will be **OFF** after restart.
**GPU Overclocking**

The GPU setting can be used to adjust the GPU Core Increment and Memory Increment by means of the sliders, then click **Save** to retain the setting changes.

*Figure B - 7 - GPU Overclocking*
**CPU Overclocking**
You can adjust the **CPU** setting by adjusting the sliders for the **CPU Ratio Override**, then click **Save** to retain the setting changes.

*Figure B - 8 - CPU Overclocking*
Control Center

LED Keyboard

The LED Keyboard menu will allow to configure the backlight LED. You can change the colors for individual keys on the illuminated colored “Per Key” LED Keyboard.

The LED Keyboard application can be accessed by pressing the Fn plus key (or by clicking LED Keyboard in the Control Center), or from the Windows Start menu.

Override Boot Effect

On boot the colored keyboard will momentarily flash. You can click in the Override Boot Effect check box to disable the keyboard flashing effect as the system boots.
**LED Keyboard Setting**

Click **Keyboard**, on the left under **LED Mode**, to set individual color settings for any keyboard keys you may wish to highlight.

Simply click to highlight any keys to which you wish to apply the color, and then click a color from the swatch to apply the color. To highlight further keys first click to deselect any previously selected keys, then repeat the above procedure. To clear settings click **Restore**.

Keyboard Effects (for Illuminated Colored “Per Key” LED Keyboards)
Click on Keyboard Effect (under LED Mode) and then click any of the Effect buttons (Wave, Breath, Scan, Blink, Random, Ripple or Snake) to view the effects on the keyboard. You can also adjust the LED Speed for the effects from the buttons on the right. Some effect colors can set to Random or Custom.

Figure B - 10 - Keyboard Effects - Illuminated Colored N-Key Rollover “Per Key” LED Keyboards
LED Light Bar

This system features an LED light bar. You can use the Light Bar (LED Mode) control to configure the lighting. The Light Bar effect features different lighting modes, some of which can be set to Random or Custom colors. The Light Bar can also be adjusted for Brightness and LED Speed.

Figure B - 11 - LED Mode - Light Bar
Flexikey® Application

Click Flexikey in the Control Center or Start menu to launch the application.

Profiles

The controls at the top right side of the application relate to Profiles. You can Add/Delete Profiles (you can maintain 12 active Profiles), Export and Import profiles by clicking on the appropriate icon. If you double-click on a Profile you can change the Profile Name, and import an Image file (images created using PNG files).

Figure B - 12 - Flexikey® - Profiles (Keyboard Macro)
• **EXPRESS KEY** - This feature allows you to configure a single key to send multiple key combinations or to create more useful shortcut keys. This is useful in gaming or when using applications which have a complex set of keyboard shortcuts.

• **EXPRESS TEXT** - With this you can assign single keys to send commonly used strings of text.

• **DISABLE** - Use this function to disable any keyboard keys.

• **STATISTICS** - Use this to quickly record keys in use in any application, and to disable unused keys.

**Keyboard Macro and Mouse Macro Settings**

Click **Enable** (at the bottom right of the screen) to create settings for the keyboard and/or mouse by clicking the tab at the bottom of the screen. Clicking on **Keyboard Macro** or **Mouse Macro** allows you to access the settings page for the either the keyboard or mouse.

**Enabling or Disabling Flexikey®**

You can enable or disable Flexikey® (and therefore any hotkeys or mouse profile functions currently in use) by using the **Fn + Backspace** key combination. Pressing this key combination will toggle you between the currently selected keyboard or mouse profile to the standard keyboard and/or mouse settings, and back again. An on screen icon will also pop-up to display the status of the application as it is toggled on/off.

The keyboard macro settings allow you to configure actions for any single key (or a combination of keys). Click the key and then select the action type (Express Key, Express Text or Disable) from the menu at the top of the page.

Figure B - 14 - Keyboard Macro
Mouse Macro

When an external mouse is attached, the mouse macro settings allow you to configure actions for the left 1, right 2 and middle 3 buttons of the attached mouse, and also for any backward 4 and forward 5 buttons if applicable (on a gaming type mouse). Click the button number and then select the action type (Express Key, Express Text or Disable) from the menu.

Figure B - 15 - Mouse Macro Configuration
Keyboard Macro - Express Key

To configure a single key to send multiple key combinations, or to create more useful shortcut keys, use Express Key.

1. **Enable** and select the keyboard, click on the chosen key to select it, and then click to select **Express Key**.

![Keyboard Macro - Record Express Key](image)

*Figure B - 16 - Keyboard Macro - Record Express Key*
2. In the following example we want to change an existing game key configuration which uses the left shift key for sprinting, and the W key for moving forwards, to use the 1 key to combine this movement to sprint forward.

3. Click the Record button and then press the key or keys (in this case we will press Left Shift and W) required (make sure you press the key(s) required and do not click on them).

4. Click the Record button again to complete the process and stop recording.

5. If you want to remove any individual key click to select it, and then click Restore.

6. Any assigned Express Keys will be highlighted in green.
Enabling Delay Time
If you want to create a delay between key presses within the key combination, then you can use **Enable Delay Time** function to do so.

1. **Enable** and select the keyboard under your chosen profile, click on the chosen key to select it, and then click to select **Express Key**.
2. Click the **Record** button and then **press** the key or keys required in the sequence and time delay between key presses required (make sure you **press the key(s) required** and do not click on them).
3. Click the **Record** button again to complete the process and stop recording.
4. Click to select a key in the sequence and click **Enable Delay Time**, then click a key to view the time delay.

![Enable Delay Time](image)
5. You can edit the delay between key presses by clicking in the **Delay Time (MS)** field and typing a new number for the delay between the key presses.

![Figure B - 18 - Time Record Between Key Presses](image)

6. If you want to remove any individual key click to select it, and then click the delete symbol.

7. If you want to clear all the settings click **Restore** to return to the default key setting.

**Keyboard Macro - Express Text**

A single key can be set to send a string of text within any application using **Express Text**.

1. **Enable** and select the keyboard, click to select a key, and then click to select **Express Text**.
2. Click the **Record** button in **Start** key and press the keys to use (the **Start** key is the key used to in your target program to open a text message).
3. Click in the **Text Context** field and type in your message and click **Save**.

![Keyboard Macro - Express Text](image)

*Figure B - 19 - Keyboard Macro - Express Text*
4. Click the **Record** button in **Send** and press the keys to use if required (the **Send** key is the key used to in your target program to send a text message e.g. the Enter key would be the most commonly used).

5. The key will now be configured to send the text message in the target program under your chosen Profile, and the key will appear in **blue**.

6. If you want to remove any **Express Text** key, select it and click on **Restore**.

---

**Copy & Paste Text**

Note that some applications and games do not support copy and pasted text. Where this is the case, any text you may have copy and pasted in to the “Type to Text” field may not be displayed within the application. In this case you will need to type the text into the field instead.

Keyboard Macro - Disable

You can use the program to disable any keys not required.

1. **Enable** and select the keyboard, click to select a key to disable, and then click to select **Disable**.
2. The key will now be disabled.
3. If you want to enable the key again, select it and click on **Restore**.
4. The key will be disabled, and the key will appear in **Gray**.
Mouse Macro - Express Key

To assign a mouse button click to send multiple key combinations (an external mouse must be attached), or to create more useful shortcut keys, use **Express Key**.

1. **Enable** and select the mouse, click on a mouse button to select it, and then click to select **Express Key**.
2. In the following example we will configure the central mouse wheel to combine the actions of **left shift** key for sprinting, and the **W** key for moving forwards in a game program.
3. Click on the central mouse wheel for the shortcut action.
4. Click the **Record** button and then **press** the key or keys (in this case we will **press** Left Shift and **W**) required (make sure you **press the key(s) required** and do not click on them).
5. Click the **Record** button again to complete the process and stop recording.
6. If you want to remove any mouse setting click to select it, and then click **Restore**.
7. The mouse button for any assigned Express Keys will appear in **green**.

**Enabling Time Record for Mouse Settings**

If you want to create a delay between key presses within the mouse click combination, then you can use **Time Record** function to do so in the same manner as that used for keyboard settings (see "**Enabling Delay Time** on page B - 20").
Mouse Macro - Express Text

A mouse button click can be set to send a string of text within any application using Express Text.

1. **Enable** and select the mouse, click on a mouse button to select it, and then click to select Express Text.
2. Click the **Record** button in Start key and press the keys to use (the Start key is the key used to in your target program to open a text message). Click the **Record** button again to stop the process.
3. Click in the **Text Context** field and type in your message and click **Save**.
4. Click the **Record** button in Send and press the keys to use (the Send key is the key used to in your target program to send a text message e.g. the Enter key would be the most commonly used). Click the **Record** button again to stop the process.
5. The key will now be configured to send the text message in the target program under your chosen Profile, and the key will appear in blue.
6. If you want to remove any Express Text key, select it and click on **Restore**.

**Copy & Paste Text**

Note that some applications and games do not support copy and pasted text. Where this is the case, any text you may have copy and pasted in to the “Type to Text” field may not be displayed within the application. In this case you will need to type the text into the field instead.
Mouse Macro - Disable

You can use the program to disable any mouse button clicks if not required.

1. **Enable** and select the mouse, click on a mouse button to select it, and then click to select **Disable**.
2. The button click will now be disabled.
3. If you want to enable the button again, select it and click on **Restore**.
4. The button click will be disabled under your chosen Profile, and the key will appear in **Gray**.

Statistics

The Statistics tab allows you to record keys used in any application, and to disable any infrequently, or unused, keys to save any accidental incorrect key presses.

1. Click the Statistics Tab, and press the Record button to start recording the frequency of key presses for keys used.
2. You can then go to the application for which you wish to use the profile, and use the application as per normal so that a standard set of keys used may be recorded.
3. Return to the Flexikey® application and press Record button again to stop recording.
4. At the end of the recording process colors will represent the frequency of key presses, with the darker keys as the most frequent through to lighter the less frequent (the color dial on the left of the screen displays the color code against the number of key presses).
5. You can move the mouse over any key to see the number of times it has been pressed.
6. If you want to disable a key click Quick Disable and click the keys you wish to disable (the key will become grayed out) and then click Save to retain the settings.

Appendix C: Video Driver Controls

Overview

The video features for this computer can be configured using the Windows Display Settings or NVIDIA control panel.

Video Card Options

Note that card types, specifications and drivers are subject to continual updates and changes. Check with your distributor/supplier for the latest details on video cards supported.

Configuring External Displays

You can use the System (in Settings - page C - 7) control panel or the + P (or Fn + F7 - page C - 6) key combination, to configure an external display.

You can also use the NVIDIA (see page C - 20) control panel to configure external displays.
Video Driver Controls

Video Driver Installation

Make sure you install the drivers in the order indicated in Table 4 - 1, on page 4 - 4. Insert the Device Drivers & Utilities + User’s Manual disc into an attached DVD drive and click Install Drivers (button).

NVIDIA Video (VGA)

1. Click 3.Install NVIDIA VGA Driver > Yes.
2. Click AGREE AND CONTINUE (button) to accept the terms of the license agreement.
3. Click Next.
4. Click Close to complete the installation.
5. Go to the Microsoft Store to download the NVIDIA Control Panel.
6. After all the drivers have been installed (an internet connection is required) run the NVIDIA GeForce Experience by clicking the desktop icon (or app).

Note: After installing the video driver go to the Display control panel to adjust the video settings to the highest resolution.

(see over)
NVIDIA Apps
1. Click **4. Install NVIDIA Apps > Yes.**
2. Click **AGREE AND CONTINUE** (button) to accept the terms of the license agreement.
3. Click **Next.**
4. Click **Close** to complete the installation.
5. After all the drivers have been installed (an internet connection is required) run the **NVIDIA GeForce Experience** by clicking the desktop icon (or app).
Video Driver Controls

NVIDIA GeForce Experience

If you have a working internet connection (and you will need remain connected to the internet to run NVIDIA GeForce Experience) you can click the NVIDIA GeForce Experience desktop icon (or app) to run the application. This will optimize your gaming settings for your NVIDIA GPU by downloading the latest settings from the NVIDIA cloud data center.

You may need to create an NVIDIA account to log-in to the system (alternatively you may be able to use your Facebook or Google account to log-in).

After logging in to the system you can click through any on-screen instructions to update your settings and check for installed games etc.

By running the NVIDIA GeForce Experience you will be able to download the latest drivers to insure compatibility with games, power saving features and various other enhancements for your NVIDIA GPU (these features are subject to change and update so check with the NVIDIA website for the latest information).

Note that to enable BatteryBoost you must be connected to the internet (see over).
NVIDIA GeForce Experience - BatteryBoost

BatteryBoost allows you to optimize your system’s battery life when gaming. You can adjust the BatteryBoost slider in Preferences > BatteryBoost (make sure you have restarted the computer after the first run of NVIDIA GeForce Experience).

Running BatteryBoost

1. On first run of NVIDIA GeForce Experience you should be connected to the internet (BatteryBoost will not appear at this stage).
2. After the first run you should restart the computer manually, but you must still be connected to the internet (the LAN cable should be plugged-in, or your WiFi connection should be set to Connect Automatically) as the computer restarts.
3. BatteryBoost will be present when NVIDIA GeForce Experience is run again.

Click to put a tick in the box alongside BatteryBoost to enable the feature, then adjust the slider towards Longer battery life or Higher performance as preferred.
Configure Other Displays Using Project

You can configure attached displays from Project.

1. Attach your external display(s) to the appropriate port, and turn it(them) on.
2. Press the + P key combination.
3. Click on any one of the options from the menu to select PC screen only, Duplicate, Extend or Second screen only.
4. You can also click Connect to a wireless display at the bottom of the Project screen and follow the steps to connect to any wireless enabled display.

HDMI Audio Configuration

HDMI (High-Definition Multimedia Interface) carries both audio and video signals. In some cases it will be necessary to go to the Sound control panel and manually configure the HDMI audio output as per the instructions below.

1. Go to the Sound control panel.
2. Click Playback (tab)
3. The playback device will be selected.
4. You may need to select the audio device and click Set Default (button).
5. Double-click the device to access the control panel tabs.

Volume Adjustment

The sound volume level can be clicking using the volume control icon in the notification area of the taskbar.

HDMI Notes

• Connect a device with HDMI support to the HDMI-Out port **BEFORE** attempting to play audio/video sources through the device.
• To play audio sources through your external display’s (TV or LCD) speakers you will need to go to the audio configuration control panel on the display and configure the audio input accordingly (see your display device manual).

HDMI Video Configuration

1. Connect an HDMI cable from the HDMI-Out port to your external display.
2. Configure your external display as per the instructions in this chapter.
3. Set up your external display (TV or LCD) for HDMI input (see your display device manual).
4. You can now play video/audio sources through your external display.

Other Applications

If you are using a third party application to play DVDs etc. from any attached DVD device, you will need to consult the application’s documentation to see the appropriate audio configuration (the application must support digital to analog translation).
Wireless Display

Wireless Display uses your Wireless LAN module/WLAN Bluetooth Combo module (you need to make sure that your video adapter/display device is compatible with your particular WLAN/Combo module) in conjunction with a compatible video adapter/display device (purchased separately) to allow you to display the contents of the notebook display on another display (e.g. HDTV), without the need to have cables stretching across a room.

You can use the wireless display to play games, browse the internet, display videos or photo slide shows on your TV/external display without using HDMI or A/V cables.

Before configuring Wireless Display you will need to set up your compatible adapter with your display/speakers. Connect the adapter using an HDMI or A/V cable and turn on the display (or in the case of speakers connect them to the wireless speaker adapter with the cables provided with the adapter), and then set the display to the appropriate input channel (see the documentation supplied with your compatible adapter/display for full details).

Note that no driver or application is required for wireless display in Windows 10.
Wireless Display Configuration

1. Note that no driver or application is required for wireless display in *Windows 10*.
2. Press the `+ P` key combination.
3. Click **Connect to a wireless display** at the bottom of the **Project** screen and follow the steps to connect to any wireless enabled display.

![Project Options](image)

4. The system will then search for compatible display devices (**this may take up to 60 seconds** so allow time for this to complete).
5. Double-click any detected display device in the list.
6. Double-click any detected display device in the list.
7. You may then need to input a pin number for the device to which you are connecting and click **Next**.
8. The display will then connect (for specific settings for your display see the documentation supplied with your compatible adapter/display for full details).
9. Go to the **Project** menu and click **Disconnect** to temporarily disconnect from the wireless display.
10. To permanently disconnect from the display (you will need to go back through the connection process again) you can select it in **Devices** and click **Remove Device** > **Yes**.
**NVIDIA Control Panel**

More advanced video configuration options are provided in the **NVIDIA Control Panel** tab.

1. Access the **NVIDIA Control Panel** from the **Start** menu in **Windows** (or right-click the desktop and select **NVIDIA Control Panel**).
2. To configure displays in **Discrete** mode you can use the **NVIDIA Control Panel**.

Configure Surround, PhysX®

NVIDIA® PhysX® is a physics engine that can use the GPU to accelerate game and 3D application performance. You can select the GeForce video card or CPU as a PhysX® processor, or configure the computer to auto-select a PhysX® processor (recommended default setting). You can also setup Surround configuration to combine up to three external multiple displays into a single unified display.

1. Attach your external displays to the appropriate ports, and turn them on.
2. Go to NVIDIA Control Panel.
3. Click Configure Surround, PhysX.

Surround Displays

It is strongly recommended that you use 3 identical external displays as part of your Surround setup (the notebook computer’s internal display is disabled in this setup).

Latest Specification Information

The specifications listed in this Appendix are correct at the time of going to press. Certain items (particularly processor types/speeds and CD/DVD device types) may be changed, updated or delayed due to the manufacturer’s release schedule. Check with your distributor/supplier for details.

Note that this computer model series may support a range of CPUs and/or video adapters.

To find out which CPU is installed on your system go to the Start menu and select Settings, and then select System and click About. This will also provide information on the amount of Installed RAM etc.

To get information on your system’s video adapter go to the Start menu and select Settings, and then select System and click Display> Advanced display settings > Display adapter properties.
