

WHAT IS MEASURE-IT™?

Measure-IT software automates the data collection and reporting of body and apparel measurements. Measure-IT allows the user to record accurate measurements of garments and people when paired with 3D body scanners or a Bluetooth-enabled measuring device.

MEASURE APPAREL

- Accuracy — Record with millimeter precision.
- Visibility — All results can be viewed by vendors and customers, reducing shipping and receiving time.
- Accountability — Measure-IT addresses ISO 9000 guidelines for measuring, tracking and reporting quality.

MEASURE PEOPLE

- Accuracy — Measurements are accurate to within 1/10th of an inch.
- Visibility — 3D Avatars are generated as visual validation.
- Accountability — The single source of data eliminates data entry errors.

55% less time and
100% accurate!

BLUETOOTH MEASURING DEVICE

Our Bluetooth measuring device is a solution that is paired with the Measure-IT software. It allows users to take extremely accurate measurements in a snap, then wirelessly transmit that information to a PC or tablet to create a fully digital process.
