

FRY REGLET

We are reaching out to all customers regarding raw materials shortages within our industry and through all suppliers at all levels. Fry Reglet products are 100% made in the USA, and while that does make our supply chain strong, it does not exempt us from the troubles of the world. Globally the shutdowns to prevent the spread of the pandemic created gaps in every link of the supply chain, all the way down to mining operations, and supplier deliveries have hit the slowest pace since the 1970s.

We have been talking with various supply chain managers within our supplier base and most feel this is a short/medium-term situation, but we are taking a very serious posture to address deliveries.

Currently in our industry we are seeing major shortages in the following areas:

- Petroleum based products – particularly Polyurethane, many plastic resins, and adhesives
- All Metals – but primarily aluminum body and casted products
- Labor issues and logistics (Cargo container ships are stacked up at sea currently waiting for unload around several key US ports)

At this point raw materials are now being allocated within the supply chain and based upon forecasted data only. During this period, Fry Reglet is working to boost our inventory levels. We will continue to work more closely with you, our Customer, to meet any immediate or future product needs. Through forecasting and better inventory controls, Fry Reglet is working to help soften these impacts.

We want to be better Partners for you. We are doing the hard work of building a fully transparent supply chain through partnering and sharing information at a level rarely seen in any industry. Our suppliers share our goal, to keep promises. We have made significant progress, and we know your experience will be improved as a result.

C.J. Nord, C.P.M.
