Biography:

Dr. Beau Reilly is a neuropsychologist who is board certified in pediatric neuropsychology and clinical child and adolescent psychology. He provides neuropsychological assessment, treatment, and consultation for children and families with neurodevelopmental needs. Dr. Reilly obtained his doctorate in clinical psychology from Seattle Pacific University in 2010 and board certification from the American Board of Clinical Child & Adolescent Psychology (ABCCAP) in 2013. He then obtained board certification in Pediatric Neuropsychology from the American Board of Pediatric Neuropsychology (ABPdN) in 2015. He completed his postdoctoral training at the University of Washington Autism Center, serving on appointment as senior fellow on multiple studies examining copy number variations (CNV) and genetic events among children on the autism spectrum funded by the Simons Foundation for Autism Research Initiative (SFARI). He completed clinical and research training for the Autism Diagnostic Interview – Revised (ADI-R) and the Autism Diagnostic Observation Schedule (ADOS) from the University of Michigan Autism & Communication Disorders Center (UMACC) in Ann Arbor, Michigan. He is a level IV provider in Pivotal Response Treatment (PRT) with specialization in self-management training certified by the Koegel Autism Center at the University of California Santa Barbara. Dr. Reilly employs empirically supported instruments and treatments to provide diagnostics and care for patients and enjoys collaborating with children, family, and other support members to make a child or adolescent’s life as fulfilling as possible. He adopts a strength-based and practical approach to treatment that seeks to maximize generalization and independence.
