

Mobile Plus Backup Solution Desktops/laptops

Why Protect Mobile Workforce Data?

Each week over 12,000 laptops are lost or stolen in US airports alone. Analysts estimate the average value of the data on each of those laptops at \$525,000. The exposure to theft and the related high value of PC data make it essential that you protect the data spread across your mobile workforce. Acey Systems MobilePlus is an integrated desktop/laptop backup, recovery and data protection end point solution that sends your users' data to a cloud-based data center. Acey Systems MobilePlus makes PC backup and recovery easy for you and your users, while providing complete data backup, restore and remote data deletion in the event of PC theft or loss.

Get desktop and laptop backup, recovery, and data protection in one

Acey Systems MobilePlus keeps working even when PCs are offline: data is backed up to the local hard drive and transmitted the next time the device connects to the network. When connected to the Internet, it automatically backs up offsite, providing total disaster protection. MobilePlus protects users by locking down data with disk encryption, port access control, remote data deletion, and device tracing. In the case of a lost or stolen laptop, remote data deletion eliminates the fear of mobile data breach. Data can be recovered onto a new device in its current state, helping to ensure business continuity.

Central management of your mobile workforce

Acey Systems MobilePlus provides backup, recovery and data protection solution for laptops, desktops and tablets spread across your mobile workforce. Securely and remotely deploy, access and manage backups through a simple interface on any device via a web browser. The installation wizard makes setup and administration easy, and an intuitive dashboard confirms that backups occur as expected. Customizable views make it easy to manage agents and role-based user access lets you delegate backup tasks. To facilitate large deployments, you can apply backup settings from one system to a group of agents.

Critical Data Threats:

- Hardware/Media failure
- Viruses
- Power Failure
- Human Error
- Sabotage
- Natural Disaster

Benefits:

- 24/7 data access and support
- Service level agreement
- 256-bit AES encryption
- Offsite, mirrored data centers
- SAS70 Type 2/SOC2 audited
- Rapid data recovery
anytime, anywhere
- Minimize corporate data loss and exposure
- Protect mobile data with unobtrusive backups and simple restores
- Eliminate ad hoc PC backup and recovery solutions with centralized management
- Strike a balance between corporate control and end user independence
- Recover lost data to any device
- Remotely delete data from lost or stolen devices

Features

- Central portal
- Disk encryption

- Port access control
- Remote data deletion
- Device tracing

Cost:

\$15 /device per month, 1GB-40GB of storage

\$45 /device per month, 41GB – 150 GB of storage
