

### **Why Back up Critical Application Data Online/Offsite?**

Your financial records, contracts, and client information are the foundation of your business. When you consider all of the information stored on your company's servers, you begin to realize the potential magnitude of loss in the event of a disaster, sabotage, hardware failure, or human error. Acey Systems allows you to back up your critical business data to a remote and secure location for rapid disaster recovery—an important part of your data security and business continuity plan.

Acey Systems Classic is our automated online backup and recovery offering that provides secure, reliable, efficient protection of your organization's critical data. Acey Systems Classic backup provides data protection infrastructure that lets you safeguard your data without additional capital. Data is backed up to an offsite location and optionally to a local appliance for quicker recovery time. The software backs up only changes to the data on your protected system, minimizing workstation load and backup time.

### **Critical Data Threats:**

- Hardware/Media failure
- Viruses
- Power Failure
- Human Error
- Sabotage
- Natural Disaster

**Benefits:**

- 24/7 data access and support
- Service level agreement
- 256-bit AES encryption
- Offsite, mirrored data centers
- SAS70 Type 2/SOC2 audited
- Rapid data recovery  
anytime, anywhere
- User-defined number of  
versions saved
  
- Broad platform support—  
Microsoft Windows , Unix,  
Linux, AS400, Netware
- Plug ins for SharePoint, Bare  
Metal, SQL, Oracle, Exchange,  
Exchange Message Level,  
VMware
- Flexible Retention Schedule  
(daily, monthly, yearly...)
- No hardware  
purchase required
