

PROJECT RUNDOWN

SPRINGDEL MAKES MIGRATION TO GOOGLE ANDROID QUICK AND SIMPLE

Being one of Europe's most notable online retail brand, handling orders from 9 million customers a day takes gigantic effort and they've made this possible with the use of technology tools to enable their operations. Reliance on such tools makes their platform the most secure in the E-commerce world. They believe that through technology, they will stay ahead of the rest.

WHAT THE CLIENT NEEDED

Retail Client was an early adapter to mobile technology because their warehouse operations and staff had to quickly scale up in a short time. They incorporated mobile rugged devices to handle daily operations pertaining to the fulfillment and delivery side of the business. They've relied, for years, on varied tools to be integrated into their devices. The problem was not everything could be sourced from one place. Regular updates and maintenance had to be done from different sources, thus, meant having operational downtime. They came to us seeking MAJOR upgrades, asking if they switch or migrate into to our devices, would migration to Android systems also mean a heavy cost to their operations?

WHAT SPRINGDEL OFFERED

We came back with ONE answer only. Our devices will easily adapt to Google Android (or any operational system) with the assurance that they'll never have to go beyond our expertise to update, maintain and regularly check any device on their fleet. Plus, integration will be done in mere minutes instead of days and our "intelligent" solution can predict downtime even before it happens. IN other words, we are ONE place to shop what they need plus a lifetime of support .

APPROVED RESULTS

Since the first phase of the "major" switch happened, no operational downtime has ever occurred which has been a blessing to them. Having saved up millions on the first few months, they are now investing in more rugged devices for the foreseeable future. The goal is to complete this migration before the year 2020 and be ready for the next wave of Ecommerce revolution.
