Introduction on FRaBSA

The Front Range Biological Safety Association (FRaBSA) is an official affiliate of the American Biological Safety Association (ABSA). FRaBSA was founded in 2009 for the purpose of promoting interest in and the advancement of biological safety related to laboratory and field practices, lab facility design and operations. We address issues of biosafety for work with human and animal pathogens, including biosecurity issues related to dangerous pathogens.

FRaBSA provides a forum for dissemination of information between individuals in these and related fields. Our membership includes individuals from academic institutions, private industry, as well as local, state and federal agencies.
