

Advancing Community College Efforts in Paraprofessional Training (ACCEPT) Project

ACCEPT Project Student Survey Summary

Spring 2013

The faculty from Central Piedmont Community College (CPCC) and the University of North Carolina at Charlotte (UNCC) collaborated to infuse early intervention and early childhood special education content, instruction, and practices into early childhood education coursework within the Associate in Applied Science (AAS) degree program in Early Childhood Education offered through CPCC. During the Spring semester of the second year of formal collaboration, faculty from CPCC and UNCC ACCEPT Team members worked together to select special education resources that would be included in each of 23 CPCC Early Childhood courses. Collaboration included creating, for each infused course, matrices providing information on resources and course calendars designed to reflect special education content infusion before and after the implementation of the ACCEPT Project.

At the beginning of the Spring 2013 semester, a survey was administered to students in each of the infused early childhood courses to provide baseline data for evaluating the effect of infusion on “perceived preparedness” to carry out tasks in twenty-two competency areas. The survey was re-administered at the end of the semester. In addition to items addressing special education content, demographic information questions were also included to provide a basis for describing the students registered for the targeted CPCC Early Childhood coursework during the first full-implementation phase of the project. Usable responses were received from 241 students at the beginning of the semester and 114 students at the end of the semester.

Participants

Distribution of students across pre-test and post-test groups was similar for gender ($X^2 = 0.15$, $df = 1$, $p > .05$), ethnicity ($X^2 = 6.39$, $df = 6$, $p > .05$), highest level of previous education ($X^2 = 2.16$, $df = 6$, $p > .05$), number of semesters attended ($X^2 = 4.92$, $df = 2$, $p > .05$), current job environment ($X^2 = 1.50$, $df = 4$, $p > .05$), intent to earn an associate degree ($X^2 = 5.95$, $df = 2$, $p > .05$), and intent to transfer to four-year institution ($X^2 = 0.59$, $df = 2$, $p > .05$). At the end of the semester, students who completed the post-test reported completing about 16% more courses ($X^2 = 24.89$, $df = 3$, $p < .05$) than students who completed the pre-test; and, about 12% more students indicated currently working with young children than at the beginning of the semester.

Pre-test. Students providing selected demographic information included 93.4% ($n = 225$) females and 4.6% ($n = 11$) males; 22.4% ($n = 53$) were between the ages of 16 and 24, and 77.6% ($n = 184$) were older than 25 years of age. Ethnicity of the respondents included 66.1% ($n = 158$) African American or Black, 23.0% ($n = 55$) White or Caucasian, 1.7% ($n = 4$) Hispanic or Latino, and 6.0% ($n = 13$) Asian or Pacific Rim; 3.8% ($n = 9$) were from other ethnic backgrounds and none were American Indian or Alaska Native.

Responses to the question, “*Before entering this community college, what was your highest level of education?*”, indicated that 41.4% ($n = 99$) of the students had earned a high school diploma, 34.3% ($n = 82$) had taken some college coursework, 9.2% ($n = 12$) had earned a Bachelor’s (4 year) degree, 4.6% ($n = 11$) had a certificate, 7.1% ($n = 17$) an Associate’s (2-year) degree, 1.7% ($n = 4$) less than a high school diploma, 1.7% ($n = 4$) a Master’s degree, and none had a Doctorate or Professional degree. Responses to the question regarding number of semesters the students had attended CPCC indicated that 33.2% ($n = 78$) had attended 1-2 semesters, 26.0% ($n = 61$) 3-4 semesters, and 40.9% ($n = 96$) 5 or more semesters. Participant responses also indicated that 41.8% ($n = 99$) completed 0-3 courses at CPCC, 16.9 ($n = 40$) completed 4-6 courses, 9.7% ($n = 23$) 7-9 courses, and 31.6% ($n = 75$) completed 10 or more courses.

ACCEPT Project Student Survey

Of students responding to the question about their current job environment, 51.9% ($n = 125$) reported that they currently worked with young children ages 0 to 5 years with 55.1% ($n = 97$) working at a center, 26.7% ($n = 47$) in another setting, 11.4% ($n = 20$) at a family child care or group child care home, 6.3% ($n = 11$) in a public school setting, and 1.0% ($n = 1$) at a Head Start facility. Responding to the question asking if they intended to earn an associate's degree in early childhood from CPCC, 79.2% ($n = 190$) responded "yes," 15.0% ($n = 36$) were undecided, and 5.8% ($n = 14$) answered "no." When asked if they planned to transfer to a four-year institution, 41.4% ($n = 107$) answered "yes," 32.4% ($n = 78$) were undecided, and 23.2% ($n = 56$) answered "no."

Post-test. Students ($N = 114$) completing the survey at the end of the semester included 96.3% ($n = 103$) females and 3.7% ($n = 4$) males; 19.4% ($n = 21$) were between the ages of 16 and 24 and 80.6% ($n = 87$) were older than 25 years of age. The reported ethnicity of this group was 71.3% ($n = 77$) African American or Black, 18.5% ($n = 20$) White or Caucasian, 1.1% ($n = 1$) Hispanic or Latino, 4.6% ($n = 5$) Asian or Pacific Rim, and 1.9% ($n = 2$) American Indian or Alaska Native.

Responses to the question, "*Before entering this community college, what was your highest level of education?*," indicated that 48.6% ($n = 53$) of the participants had earned a high school diploma, 30.3% ($n = 33$) had taken some college coursework, and 7.3% ($n = 8$) had earned a Bachelor's (4 year) degree, and 4.6% ($n = 5$) had a certificate, 7.3% ($n = 8$) an Associate's (2-year) degree, 1.0% ($n = 1$) a Master's degree, and none had a Doctorate or Professional degree. Responses to the question regarding number of semesters participants had attended CPCC indicated that 23.8% ($n = 25$) had attended 1-2 semesters, 22.9% ($n = 24$) 3-4 semesters, and 53.3% ($n = 56$) 5 or more semesters. Participant responses also indicated that 14.8% ($n = 16$) completed 0-3 courses at CPCC, 25.9 ($n = 28$) completed 4-6 courses, 11.1% ($n = 12$) 7-9 courses, and 48.1% ($n = 52$) completed 10 or more courses.

Of participants responding to the question about their current job environment, 65.1% ($n = 69$) reported that they currently worked with young children ages 0 to 5 years with 61.4% ($n = 51$) working at a center, 24.1% ($n = 20$) in another setting, 8.4% ($n = 7$) at a family child care or group child care home, 4.8% ($n = 4$) in a public school setting, and 1.2% ($n = 1$) at a Head Start facility. Responding to the question asking if they intended to earn an associate's degree in early childhood from CPCC, 84.4% ($n = 92$) responded "yes," 6.4% ($n = 7$) were undecided, and 9.2% ($n = 10$) answered "no." When asked if they planned to transfer to a four-year institution, 42.7% ($n = 47$) answered "yes," 36.4% ($n = 40$) were undecided, and 20.9% ($n = 23$) answered "no."

Procedure

A comprehensive review of early childhood competency-focused literature in both general and special education was conducted and forty-four competency items were identified. The ACCEPT Project research team reviewed the pool of items to document any overlapping or duplicate content. The survey was refined by content reviewers with at least 35 years of experience in early childhood-special education among them. The reviewers provided feedback on (a) adequacy of overall coverage, (b) distinctiveness of each item, (c) clarity of each item, and (d) whether any items needed to be added or deleted. This activity was followed with a pilot study in which one CPCC instructor and students in her Language and Literacy course provided an additional level of feedback and opinions regarding item coverage and comprehensiveness. After each of the content validity checks, the survey instrument was refined to a final version consisting of 22 items representing 8 topics (see Table 1).

Instrument. The survey used Likert-type scale ratings with the stem: "Please provide a rating for each item based on your perceived preparedness." The response choices were (a) Strongly Disagree, (b) Disagree, (c) Agree, and (d) Strongly Agree. The pre-test survey was disseminated online via *SurveyShare* or distributed during the first class session in hard copy. Instructors informed students to complete the survey once and multiple responses were not allowed from the same email address for the pre-test on-line administration. The number of students enrolled in the targeted classes (including two sections of two of the infused courses) was 219. Pre-test and post-test responses were analyzed from students who completed an electronic version of the survey.

ACCEPT Project Student Survey

To obtain summary scores for subsequent analyses, we averaged responses across items within each topic. Pre-test ($r_{xx} = .98$) and post-test ($r_{xx} = .99$) total internal consistency reliability estimates based on standardized items (i.e., when all scale items are standardized to have equal means and variances) were high.

Design and Data Analysis

We used a quasi-experimental group comparison to summarize similarities and differences in student perceptions from the beginning to the end of the semester. We obtained descriptive statistics for pretest and posttest surveys and compared average ratings on topic scores using independent group *t*-test and effect size statistics.

Results

Pre-test rating summaries including means and standard deviations reflecting “perceptions of preparedness” are in Table 2. The mean for all but one statement was above 3.0, indicating that most students agree or strongly agree with all items reflecting perceived preparedness on the survey. Statements related to more specific disability practices (e.g., “*I am prepared to apply knowledge of the etiology, characteristics, and educational implications of each Category of Disability under IDEA* ($M = 2.94, SD = 0.86$);” “*I am prepared to share with others the rights and responsibilities of children birth to 5 with exceptional needs, their families, and other stakeholders* ($M = 3.05, SD = 0.83$);” “*I am prepared to use federal, state, and local policies for confidential communication about early intervention team practices* ($M = 3.06, SD = 0.85$) received lower relative perceived preparedness scores (i.e., more teachers strongly disagreed or disagreed with those statements than others).

Post-test rating summaries including means and standard deviations reflecting “perceptions of preparedness” are in Table 3. The mean for all statements was above 3.13, indicating that most students agreed or strongly agreed with items reflecting perceived preparedness at the end of the semester. For three items, the observed differences were somewhat greater than for others: (1) The average rating for “*I am prepared to share with others the rights and responsibilities of children birth to 5 with exceptional needs, their families, and other stakeholder*” was 3.05 ($SD = 0.83$) on the pre-test and 3.22 ($SD = 0.74$) on the post-test; (2) the average rating for “*I am prepared to apply knowledge of the etiology, characteristics, and educational implications of each Category of Disability under IDEA*” was 2.94 ($SD = 0.86$) on the pretest and 3.13 ($SD = 0.70$) on the post-test; and, the average rating for “*I am prepared to provide accurate and timely information about children birth to 5 with exceptional needs to individuals who have the need and right to know under the guidance of the lead teacher*” was 3.18 ($SD = 0.76$) on the pre-test and 3.34 ($SD = 0.68$) on the post-test.

Means, standard deviations, *t*-statistics, and effect sizes comparing pretest and posttest topic scores are in Table 4. Although the differences were not statistically significant, posttest scores were consistently higher than pretest scores (see Figure 1), except for *Professional-Ethical Behavior* topics, and the effect sizes for these comparisons reflected small practical differences.

Lessons Learned

Although the practical significance of changes observed from pretest to posttest was small (i.e., effect sizes less than .40), the positive trends in these differences were encouraging especially because pretest scores were so high. Another challenge to raising post-test scores was the fact that early childhood coursework was rich with content and activities before the infusion process and there was no extra time to “add-on” infused content. Successfully blending special education content and activities with required goals, objectives, and core curriculum took much effort on the part of CPCC instructors.

Paraprofessionals are playing an increasingly prominent role in reinforcing and building on teachers’ efforts to provide the supports and services children with disabilities need to participate in general education classroom activities as learners who belong, who can meet high expectations, and who can take positions of leadership.

ACCEPT Project Student Survey

ACCEPT Project survey findings indicate that infusing special education content within the associate degree program in early childhood education at a targeted state-supported community college resulted in increased perceived preparedness of participating students to effectively identify developmental difficulties and enhance the education of children with disabilities.
