

Advancing Community College Efforts in Paraprofessional Training (ACCEPT) Project

Mitchell Community College Student Survey Summary

June 2014

The faculty from Mitchell Community College (MCC) and the University of North Carolina at Charlotte (UNC Charlotte) are collaborating to infuse early intervention and early childhood special education content, instruction, and practices into early childhood education coursework within the Associate in Applied Science (AAS) degree program in Early Childhood Education offered through MCC. On September 13, 2013, faculty from MCC and UNC CHARLOTTEACCEPT Team members partnered to select special education resources that would be included in selected MCC Early Childhood courses. Collaboration included creating, for each infused course, a syllabus providing information on resources and activities with special education content, instruction, and practices infused before and after the implementation of the ACCEPT Project.

At the beginning of the Spring 2014 semester, a survey was administered to scholars ($n = 57$) in four infused early childhood courses to provide baseline data for evaluating the effect of infusion on “perceived preparedness” to provide high quality and recommended early childhood practices in twenty-two competency areas. The survey was re-administered at the end of the semester to provide a comparison of scholar perceptions of their perceived preparedness. At the time of the post-test, a total of 15 courses in the program had been infused with resources and activities providing special education content, instruction, and practices. However, fidelity of implementation evaluated through Moodle and infused syllabus review indicated that progress was being maintained only in the following four courses: EDU 119, Introduction to Early Childhood Education; EDU 131, Child, Family, and Community; EDU 153, Health, Safety, and Nutrition; and EDU 284, Capstone Practicum. The Early Childhood Program Coordinator at MCC asked that surveys be administered only to scholars enrolled in those four courses to achieve an accurate picture of change as a result of infusion. In addition to survey items addressing special education content, demographic information questions were also included to provide a basis for describing the scholars registered for the targeted MCC Early Childhood coursework. Usable responses were received from 44 (77%) of the scholars at the beginning of the semester and 10 (17%) scholars at the end of the semester. In light of traditionally low rates of community college course completion, the response was considered acceptable for further analysis.

Participants

Ninety-six percent of the participating respondents were female and enrolled in at least one of the following early childhood courses within the AAS degree program at MCC: EDU 119, Introduction to Early Childhood Education; EDU 131, Child, Family, and Community; EDU 153, Health, Safety, and Nutrition; and/or EDU 284, Capstone Practicum. A description of each of these courses may be found in Appendix A. While respondents were currently enrolled in one or more of these four courses, data indicate that some of them may have taken additional infused coursework as well. Throughout Fall 2013 and Spring 2014 semesters, fifteen courses within MCC’s early childhood program were targeted for infusion (see Appendix A).

Distribution across pre-test and post-test groups was similar for ethnicity ($X^2 = 2.43$, $df = 5$, $p > .01$), highest level of previous education ($X^2 = 7.60$, $df = 6$, $p > .01$), number of semesters attended ($X^2 = 6.94$, $df = 2$, $p > .01$), intent to earn an associate degree ($X^2 = 2.64$, $df = 2$, $p > .01$), and intent to transfer to a four-year institution ($X^2 = 0.65$, $df = 2$, $p > .01$). The percentage of scholars who had taken 0-3 courses ($X^2 = 16.27$, $df = 3$, $p < .01$) was larger for those responding to the pretest survey and the percentage of scholars working with young children was larger for those taking the post-test ($X^2 = 16.27$, $df = 4$, $p < .01$). When shown these data, the Early Childhood Program

Citation: Algozzine, K., Correa, V., Muharib, R., D’Amico, M., & Algozzine, B. (2014, June). *ACCEPT Project Mitchell Community College Student Survey Summary*. Charlotte, NC: UNC Charlotte, Department of Educational Leadership. Retrieved from www.acceptproject.org

Coordinator at MCC stated that she believed the percentage of scholars who had taken 0-3 courses was larger for those taking the pre-test survey because up to 50% of MCC Early Childhood Program scholars drop out each semester due to financial, personal, or transportation realities challenging the opportunity for further education, and the majority of these individuals have just started the program. In other words, more scholars taking 0-3 courses were available to take the survey at the beginning of the semester before obstacles led to their terminating coursework. The coordinator also believed the reason a higher percentage of scholars responding to the post-test were working with young children was that individuals working in the field of early childhood while taking coursework were more likely to find a way to overcome challenges and continue coursework to its completion. At the end of the semester, more scholars not working with young children have dropped out, increasing the percent of scholars in the program working with young children.

Pre-test. Individuals providing selected demographic information were between the ages of 16 and 24 (34.1%, $n = 15$) and 65.9% ($n = 29$) were older than 25 years of age. Ethnicity of the respondents included 54.8% ($n = 23$) White or Caucasian, 23.8% ($n = 10$) African American or Black, 4.8% ($n = 2$) Hispanic or Latino, 9.5% ($n = 4$) Asian or Pacific Rim, and 4.8% ($n = 2$) American Indian or Alaska Native; 2.4% ($n = 1$) were from other ethnic backgrounds. While the ages of scholars were similar to the urban community college with whom UNC Charlotte had collaborated in the previous year, ethnicity of respondents differed in that the percentage of African American scholars at MCC was about 25% lower.

Responses to the question, “*Before entering this community college, what was your highest level of education?*”, indicated that 48.8% ($n = 21$) of the scholars had earned a high school diploma, 20.9% ($n = 9$) had taken some college coursework, 7.0% ($n = 3$) had an Associate degree, 11.6% ($n = 5$) had earned a Bachelor’s degree, 7.0% ($n = 3$) had a certificate, 2.3% ($n = 1$) had less than a high school diploma, and 2.3% ($n = 1$) had a Master’s degree. Responses to the question regarding number of semesters the scholars had attended MCC indicated that 57.1% ($n = 24$) had attended 1-2 semesters, 16.7% ($n = 7$) 3-4 semesters, and 26.2% ($n = 11$) 5 or more semesters. Participant responses also indicated that 79.1% ($n = 34$) completed 0-3 courses at MCC, 2.3% ($n = 1$) completed 4-6 courses, 2.3% ($n = 1$) 7-9 courses, and 16.3% ($n = 7$) completed 10 or more courses. These data differed from our previous collaborating community college in that more scholars at MCC were in the first two semesters of the program. While the number of courses taken was similar for participants at both colleges, those at the urban community college had been taking coursework for a longer period of time.

Of scholars responding to the question about their current job environment ($n = 33$), 37.2% ($n = 16$) reported that they worked with young children. Of scholars responding to the question about where they were working ($N = 33$), 51.5% ($n = 17$) were working at a center, 9.1% ($n = 3$) were in a public school setting, 12.1% ($n = 4$) were at a family child care or group child care home, and 27.3% ($n = 9$) were at a Head Start facility. Of scholars responding to the question about the age group of children they were educating ($N = 5$), 20.0% ($n = 1$) were working with infants, and 80.0% ($n = 4$) were working with children in other age groups. Responding to the question asking if they intended to earn an associate degree in early childhood from MCC, 54.5% ($n = 24$) answered “yes,” 31.8% ($n = 14$) were undecided, and 13.6% ($n = 6$) answered “no.” When asked if they planned to transfer to a four-year institution, 27.3% ($n = 12$) answered “yes,” 34.1% ($n = 15$) were undecided, and 38.6% ($n = 17$) answered “no.” Data indicated that compared to our previous collaborating community college about 15% fewer respondents at MCC worked with young children, 20% less intended to earn an associate degree, and 15% less planned to transfer to a four-year institution.

Post-test. Scholars ($N = 10$) completing the survey at the end of the semester were between the ages of 16 and 24 (40%, $n = 4$) or older than 25 years of age (60%, $n = 6$). The reported ethnicity of this group was 70% ($n = 7$) White or Caucasian, 20% ($n = 2$) African American or Black, and 10% ($n = 1$) Hispanic or Latino.

Responses to the question, “*Before entering this community college, what was your highest level of education?*” indicated that 70% ($n = 7$) of the participants had earned a high school diploma, 20% ($n = 2$) had an Associate (2-year) degree, and 10% ($n = 1$) had less than a high school diploma. Responses to the question regarding number

of semesters participants had attended MCC indicated that 20% ($n = 2$) had attended 1-2 semesters, 10% ($n = 1$) 3-4 semesters, and 70% ($n = 7$) 5 or more semesters. Participant responses also indicated that 20% ($n = 2$) completed 0-3 courses at MCC, and 80% ($n = 8$) completed 10 or more courses.

Of scholars responding to the question about their current job environment ($N = 10$), 50% ($n = 5$) reported that they currently worked with young children. Of scholars responding to the question about where they were working ($N = 7$), 42.9% ($n = 3$) were at a center, 14.3% ($n = 1$) were in a public school setting, 14.3% ($n = 1$) were at a family child care or group child care home, 14.3% ($n = 1$) were at a Head Start facility, and 14.3% ($n = 1$) were in other settings. One scholar responded to the question about the age group of children being educated indicating that she was working with children in other age groups. Responding to the question asking if they intended to earn an associate degree in early childhood from MCC, 80% ($n = 8$) responded “yes,” and 20% ($n = 2$) were undecided. When asked if they planned to transfer to a four-year institution, 40% ($n = 4$) answered “yes,” 30% ($n = 3$) were “undecided,” and 30% ($n = 3$) answered “no.”

Procedure

A comprehensive review of early childhood competency-focused literature in both general and special education was conducted and 44 competency items were identified. The ACCEPT Project research team reviewed the pool of items to document any overlapping or duplicate content. The survey was refined by content reviewers with at least 35 years of experience in early childhood-special education among them. The reviewers provided feedback on (a) adequacy of overall coverage, (b) distinctiveness of each item, (c) clarity of each item, and (d) whether any items needed to be added or deleted. This activity was followed with a pilot study in which one instructor and scholars in a Language and Literacy course provided an additional level of feedback and opinions regarding item coverage and comprehensiveness. After each of the content validity checks, the survey instrument was refined to a final version consisting of 22 items representing 8 standard topics (see Table 1).

Instrument. The survey used Likert-type scale ratings with the stem: “Please provide a rating for each item based on your perceived preparedness.” The response choices were (a) Strongly Disagree, (b) Disagree, (c) Agree, and (d) Strongly Agree. The pre-test survey was disseminated online via a *SurveyShare* link embedded in the scholar’s Moodle course. Instructors informed scholars to complete the survey once and multiple responses were not allowed from the same email address. To obtain summary scores for subsequent analyses, we averaged responses across items within each topic. Pre-test ($r_{xx} = .98$) and post-test ($r_{xx} = .98$) total internal consistency reliability estimates based on standardized items (i.e., when all scale items are standardized to have equal means and variances) were high.

Results

Pre-test rating summaries including means and standard deviations reflecting “perceptions of preparedness” are in Table 2. The mean for each item was above 3.00, indicating that most scholars agreed or strongly agreed with all items reflecting perceived preparedness on the survey. All standards received high perceived preparedness scores (i.e., 90% or more scholars agreed or strongly agreed with those statements than others), except “*I am prepared to support children birth to 5 in their use of augmentative and alternative communication as well as other assistive technology as determined by the lead teacher and early intervention team.*”

Post-test rating summaries including means and standard deviations reflecting “perceptions of preparedness” are in Table 3. The mean for all but seven statements was 3.50 or above, indicating an increase in the extent to which most scholars agreed or strongly agreed with items reflecting perceived preparedness at the end of the semester. All standards received high perceived preparedness scores (i.e., 90% or more scholars strongly agreed or agreed with those statements).

Means, standard deviations, t -statistics, and effect sizes comparing pre-test and post-test topic scores are in Table 4. Post-test scores were consistently higher than pre-test scores (see Figure 1). Although statistically

significant differences were not observed for any topics, the effect sizes for these comparisons reflected small practical changes.

Lessons Learned

Although the practical significance of changes observed from pre-test to post-test was small (i.e., effect sizes less than .45), the positive trends in these differences were encouraging especially because pre-test scores were so high. Another challenge to raising post-test scores was the fact that some early childhood coursework was rich with content and activities before the infusion process. Successfully reviewing all coursework to find content and activities that could be replaced or enhanced with more current inclusive practices took time and the fact that post-test scores were higher in every ACCEPT Standard Topic Area reflects the level of fidelity of implementation across the program demonstrated by MCC instructors.

The higher post-test score reflected in the *Laws, Policies, and Procedures* topic may very well have been influenced by the focus on infusing content related to specific disability areas defined by the Individuals with Disabilities Education Act (IDEA). While the content and activities in some courses addressed best practices for all children, other courses such as Introduction to Early Childhood Education, Child, Family, and Community, and Health, Safety, and Nutrition covered topics more specific to the field of special education such as the history of federal special education legislation, special education federal laws and state regulations added to federal statutes, and the special education referral process.

Paraprofessionals are playing an increasingly prominent role in reinforcing and building on teachers' efforts to provide the supports and services children with disabilities need to participate in general education classroom activities as learners who belong, who can meet high expectations, and who can take positions of leadership. ACCEPT Project survey findings indicate that infusing special education content within the associate degree program in early childhood education at a targeted state-supported community college resulted in increased perceived preparedness of participating scholars to effectively implement high quality and recommended practices that promote the development and learning of children with disabilities.

Results of the Fall 2013 Mitchell Community College (MCC) Student Survey indicated that scholars across the six sections of infused early childhood coursework were female and representative of diverse cultural backgrounds. The highest level of education for the majority of scholars was a high school diploma. Most pre-test respondents were in the early stages of the program (i.e., had attended 1-2 semesters) and did not work with children ages 0-5. A larger percentage of post-test respondents had attended 5 or more semesters and 50% of them worked with children ages 0-5. Although most intended to earn an associate degree from MCC, when asked if they planned to transfer to a four-year institution, about 30 % of MCC scholars answered "no" and 30% responded that they were undecided.

Information provided by the MCC early childhood program administrators and faculty provided a detailed picture of scholars attending the program and one that did not always agree with survey data. For instance, faculty members shared that scholars entered the program with varying degrees of knowledge regarding the education and care of children ages 0-5. For instance, in one section of EDU 119, Introduction to Early Childhood Education, scholars were not able to define or describe any aspect of developmentally appropriate practice (DAP) at the start of coursework while nearly half the scholars in another section understood and were able to discuss the concept. Results of the survey indicated that 90% or more scholars agreed with perceived preparedness questions that related directly to the knowledge and implementation of developmentally appropriate practices. Faculty shared that scholars did not know what an Individualized Education Program (IEP) was, yet over 80% of scholars responded on the survey that they were prepared to "apply knowledge of the etiology, characteristics, and educational implications of each Category of Disability under IDEA " and to " apply knowledge of Early Childhood/Special Education best practices as defined by professional organizers." This discrepancy between information provided by MCC administrators and faculty and survey data support the

importance of ongoing collaborative conversations among four-year institution researchers and their community college colleagues to fully understand the needs of their scholars and how to best meet those needs to prepare them for providing high-quality, evidence-based practices to young children with disabilities in inclusive settings.

I am prepared to increase the participation and engagement of all children (with and without disabilities) in the classroom (e.g., use knowledge of individual children’s strengths, interests, and learning styles to encourage engagement in varied activities).

0.0 0.0 50.0 50.0 3.50 0.53

I am prepared to promote child development and learning through varied delivery of instruction (e.g., teach individual students or small groups of students to reinforce learning and skills introduced by the teacher).

0.0 0.0 50.0 50.0 3.50 0.53

Topic 5: Use assessment data from multiple sources to create, modify, and adapt a safe learning environment that promotes the achievement of all learners.

I am prepared to collaborate with the lead teacher and early intervention team to select, adapt, modify, and use classroom instruction, curricula, materials, activities, and the physical environment for children birth to 5 with exceptional needs (e.g., use and maintain assistive technology for children birth to 5 under the guidance of the lead teacher).

0.0 0.0 50.0 50.0 3.50 0.53

I am prepared to collect information under the guidance of the lead teacher on the needs of the children, their strengths, interests, and developmental growth.

0.0 0.0 66.7 33.3 3.33 0.50

I am prepared to collect information under the guidance of the lead teacher on effectiveness of activities and lessons.

0.0 0.0 50.0 50.0 3.50 0.53

Topic 6: Build student skills to promote successful social interactions.

I am prepared to promote peer interaction skills and development of friendship in all children (e.g., teach children to effectively communicate their emotions and feelings).

0.0 0.0 40.0 60.0 3.60 0.52

I am prepared to develop and implement basic classroom rules and routines that do not undermine the dignity of the individual or the basic human rights of children with disabilities.

0.0 0.0 40.0 60.0 3.60 0.52

The topics below describe general areas relevant to special education. Please read each of the related items and circle the rating that best reflects your perception related to it.	Perceived Preparedness Rating					
	SD	D	A	SA	M	SD
I am prepared to support children birth to 5 in their use of augmentative and alternative communication as well as other assistive technology as determined by the lead teacher and early intervention team.	0.0	0.0	40.0	60.0	3.60	0.52
Topic 7: Build child, family, and community relationships that promote child development and learning.						
I am prepared to provide support to families so that they can implement health, nutrition, and safety practices and procedures for children birth to 5 with exceptional needs.	0.0	0.0	70.0	30.0	3.30	0.48
I am prepared to demonstrate and maintain a positive relationship with students, family members, colleagues, service professionals, and early intervention team members.	0.0	0.0	50.0	50.0	3.50	0.53
I am prepared to provide accurate and timely information about children birth to 5 with exceptional needs to individuals who have the need and right to know under the guidance of the lead teacher.	0.0	0.0	60.0	40.0	3.40	0.52
Topic 8: Engage in professional and ethical practice at all times.						
I am prepared to maintain the dignity, privacy, and confidentiality of all children birth to 5 with exceptional needs, families, and agency employees.	0.0	0.0	50.0	50.0	3.50	0.53
I am prepared to participate as a team member to enhance communication and problem-solving.	0.0	0.0	50.0	50.0	3.50	0.53

Table 4

Comparison of Pre-Test and Post-Test Topic Scores

Topic	Pre-Test (n = 43)		Post-Test (n = 10)		Obtained t	ES
	Mean	SD	Mean	SD		
Laws, Policies, and Procedures	3.40	0.67	3.47	0.48	-0.29 ¹	0.10
Instructional Strategies	3.36	0.63	3.37	0.46	-0.05 ¹	0.02
Child Development	3.43	0.59	3.47	0.50	-0.16 ¹	0.01

Appendix A

Mitchell Community College
2013-2014 Course Infusion

Course	Description
EDU 119 Introduction to ECE	This course covers the foundations of the education profession, the diverse educational settings for young children, professionalism and planning developmentally appropriate programs for all children. Topics include historical foundations, program types, professionalism, and creating inclusive environments and curriculum responsive to the needs of all children and families . Upon completion, students should be able to environments and activity plans appropriate for all children.
EDU 131 Child, Family, and Community	This course covers the development of partnerships between culturally and linguistically diverse families, children, schools and communities. Emphasis is placed on developing skills and identifying benefits for establishing, supporting, and maintaining respectful, collaborative relationships between diverse families, programs/schools, and community agencies/resources. Upon completion, students should be able to explain appropriate relationships between families, educators, and professionals that enhance development and educational experiences of all children.
EDU 144 Child Development I	This course includes the theories of child development, needs, milestones, and factors that influence development, from conception through approximately 36 months. Upon completion, students should be able to compare/contrast typical/atypical developmental characteristics , explain environmental factors that impact development, and identify strategies for enhancing development.
EDU 145 Child Development II	This course includes the theories of child development, needs, milestones, and factors that influence development, from preschool through middle childhood. Upon completion, students should be able to compare/contrast typical/atypical developmental characteristics , explain environmental factors that impact development, and identify strategies for enhancing development.
EDU 146 Child Guidance	This course introduces principles and practical techniques including the design of learning environments for providing developmentally appropriate guidance for all children. Emphasis is placed on observation skills, cultural influences, underlying causes of behavior, appropriate expectations, and the role of communication and guidance. Upon completion, students should be able to demonstrate strategies for preventing problem behaviors, teaching appropriate/acceptable behaviors such as problem solving, regulating behavior, negotiation, setting limits and recognizing at risk behaviors.

Course	Description
EDU 151 Creative Activities	This course covers planning, creation and adaptation of developmentally supportive learning environments with attention to curriculum, interactions, teaching practices and learning materials. Emphasis is placed on creating and adapting integrated, meaningful, challenging and engaging developmentally supportive learning experiences in art, music, movement and physical skills and dramatics. Upon completion, students should be able to create, manage, adapt and evaluate developmentally supportive learning materials, experiences and environments.
EDU 153 Health, Safety, and Nutrition	This course covers promoting and maintaining the health and well-being of all children. Topics include health and nutritional guidelines, maintaining safe and healthy learning environments, recognition and reporting of abuse and neglect and state regulations. Upon completion, students should be able to demonstrate knowledge of health, safety, and nutritional needs, safe learning environments, and adhere to state regulations.
EDU 221 Children with Exceptionalities	This course introduces children with exceptionalities, their families, support services, inclusive/diverse settings, and educational/family plans based on the foundations of child development. Emphasis is placed on the characteristics of exceptionalities, observation and assessment of children, strategies for adapting the learning environment, and identification of community resources. Upon completion, students should be able to recognize diverse abilities, describe the referral process, and depict collaboration with families/professionals to plan/implement, and promote best practice.
EDU 234 Infants, Toddlers, and Twos	This course covers the unique needs and rapid changes that occur in the first three years of life and the inter-related factors that influence development. Emphasis is placed on recognizing and supporting developmental milestones through purposeful strategies, responsive care routines and identifying elements of quality, inclusive early care and education . Upon completion, students should be able to demonstrate respectful relationships that provide a foundation for healthy infant/toddler/twos development, plan/select activities/materials, and partner with diverse families.
EDU 259 Curriculum Planning	This course is designed to focus on curriculum planning for three to five year olds. Topics include philosophy, curriculum models, indoor and outdoor environments, scheduling, authentic assessment, and planning developmentally appropriate experiences. Upon completion, students should be able to evaluate children's development, critique curriculum, plan for individual and group needs, and assess and create quality environments.

Course	Description
EDU 261 Early Childhood Administration I	This course introduces principles of basic programming and staffing, budgeting/financial management and marketing. Upon completion, students should be able to develop components of program/personnel handbooks, a program budget, and demonstrate knowledge of fundamental marketing strategies and NC standards.
EDU 271 Educational Technology	This course introduces the use of technology to enhance teaching and learning in all educational settings. Topics include technology concepts, instructional strategies, materials and adaptive technology for children with exceptionalities , facilitation of assessment/evaluation, and ethical issues surrounding the use of technology. Upon completion, students should be able to apply technology-enhanced instructional strategies and demonstrate appropriate technology skills in educational environment.
EDU 280 Language and Literacy Experiences	This course is designed to expand students' understanding of children's language and literacy development and provides strategies for enhancing language/literacy experiences in an enriched environment. Topics include the integration of literacy concepts throughout the curriculum, appropriate observations/assessments and inclusive practices . Upon completion, students should be able to select, plan, implement and evaluate developmentally appropriate and diverse language/literacy experiences.
EDU 284 Capstone Practicum	This course is designed to allow students to apply skills in a three star (minimum) or NAEYC accredited or equivalent, quality early childhood environment. Upon completion, students should be able to demonstrate developmentally appropriate plans/assessments, appropriate guidance techniques and ethical/professional behaviors as indicated by assignments and onsite faculty visits.
EDU 162 Observations and Assessments	This course explores developmentally appropriate, culturally responsive observation and assessment strategies for studying the physical, cognitive, social, and emotional development of children birth through eight years. Upon completion, students should be able to demonstrate skills in using systematic observation and documentation strategies to develop trusting relationships with children and to plan appropriate programs, environments, and activities in early childhood settings.
