Frozen Drink Machine Operating & Cleaning Instruction

Carrying the machine requires two adults.

Place machine on a sturdy countertop or table capable of supporting 180 lbs.

Allow at least six inches of space behind and on the sides of the machine for proper air flow.

6' 120 volt, 12 amp, standard electrical plug included. Extension cord not recommended.

Maximum capacity is 3 gallons per hopper.

DO NOT ADD ICE OR SOLID PRODUCT.

Liquid concentrate or granulated powder must be thoroughly mixed before adding into the hoppers.

Keep pre-mixed liquid product refrigerated to reduce cooling/freezing time in the dispenser.

Keep the hoppers topped-off during peak serving periods.

Add chilled pre-mixed liquid product as it is dispensed.

Keep the product level in the hoppers higher than the auger.

If auger is exposed, air will become entrapped in the mixture resulting in a foamy consistency.

Estimated freeze time for chilled non-alcoholic drink mix is 30-40 minutes.

Estimated freeze time for chilled alcoholic drink mix varies from 2-4 hours depending on content.

DO NOT DISASSEMBLE MACHINE.

To return it clean, thaw and drain product then flush hoppers with cool clean water.

Wipe outside of machine with a soft wet cloth.

I have read and understand these Operating and Cleaning Instructions for the Frozen Drink Machine.
