## **Popcorn Machine Operating & Cleaning Instruction**

Hang the pot on the popper so that its roller bar is on the door side of the machine.

Plug the power cord into a properly grounded electrical outlet.

Turn the light and heater to the ON setting before adding butter or oil to the pot. It is recommended that the amount not be more than .5 oz. Only use butter or oil with this popper. Liquid sugar or honey can cause damage to the pot, smoking, and even injury.

Allow the kettle to preheat for 3-4 minutes, or until you see steam exiting the pot.

Open the lid and add kernels into the pre-heated pot. Use provided measuring cup (1 scoop per batch) when dealing with bulk kernels. Close lid. At this point, the lid WILL BE HOT. Use caution.

Turn on the stirrer via its switch.

Once that step is completed, safely close the main unit's doors.

Popcorn will begin popping after 2 to 3 minutes.

When popping has finished, turn the stirrer and pot heater to OFF.

Gently turn the roller bar to completely empty the contents of the pot.

At this point, only the spot light warmer should be switched to ON.

This will keep your popcorn warm and dry until it is served.

Remove and serve popcorn with the scoops provided. If more butter or seasoning is desired, complete this step outside of the main unit in a separate bowl or container.

When finished, be sure to unplug the machine from its power supply.

Once you are finished popping, unplug the power supply and allow ample time for the unit to cool.

When removing the pot, use caution near the heat lamp bulb. It may still be hot.

With all switches off and the unit cooled, use a damp cloth to wipe the interior and exterior.

I have read and understand these Operating and Cleaning Instructions for the Popcorn Machine.
