

## Creating a Vinyl Record Bowl

- 1) Heat the oven to 200°.
- 2) Place a record on top of an oven safe bowl and put it in the oven for a few minutes.
- 3) Keep a close eye on the record! Once it starts to droop, remove it from the oven.
- 4) Push the wilting record into the bowl and start to form the sides however you wish. It won't be overly hot, but I still recommend wearing an oven mitt or a winter glove while you do this.
- 5) The record will start to harden immediately. If you need to soften it, briefly set it in the oven again. Keep a close eye on it so you can pull it out the moment it starts to wilt again.
- 6) Let the finished bowl set up and harden in your oven-safe dish.
