

NATIONAL TRIBAL FORUM ON AIR  
QUALITY MAY 2019

# Tulalip Tribes & Tribal Healthy Homes Network: Community Feedback Survey

*Darrien Benally*

*Northern Arizona University*

*2017 ITEP Student Summer Intern Participant*

# Principle Aim

## OVERVIEW

To prevent adverse health outcomes during episodes of compromised air quality by strengthening risk communication practices. Specifically, to develop a coherent strategy that reaches further in scope, **can be readily activated during an episode, can be replicated by other communities.**

# Three Survey Types

---

## *Tulalip Health Messaging Survey*

10 Respondents

Gained feedback from various department and program managers within the Tulalip administration.

---

## *Tulalip Community Members Survey*

7 Respondents

Community members provided feedback on their air quality topic knowledge and various ways they would be willing to receive emergency communication

---

## *General Tribal Health Messaging Survey*

9 Respondents

Various Tribal air quality department managers surveyed to provide feedback on their communication strategies with their communities.

## BUILD AND ESTABLISH RELATIONSHIP WITH TULALIP DEPARTMENT MANAGERS

- Set up in person meetings at the Tulalip Cafe
- Go directly to departments ask to set up a meeting
- Ask other department managers for connections

## CONNECTIONS TO COMMUNITY

Creating and establishing community buy in. Would community members be willing to join in to a text message system or other alert systems?

# Key Findings

## *Tulalip Health Messaging Surveys*

10 participants indicated willingness to participate in the emergency response network.

10 participants indicated they would like trainings provided by the air quality department.

## *Tribal Health Messaging Survey*

9 Total Respondents

7 responses indicated that in person communication is the most successful way of communicating.

7 respondents do not use the Flag kit program used by the US EPA.

## *Tulalip Community*

Recognized need for messaging system and mitigation strategies, community was willing to participate

**AIR MATTERS  
HEALTHY BODIES  
HEALTHY MINDS**

Air quality matters for personal health. The air we breathe can impact our health. It is important to watch out for youth, elders and those with lung diseases when there is poor air quality.
