

HSW is continuing to monitor and adapt to the rapidly-changing guidelines and regulations as they apply to our offices and work throughout the United States.

As consultants for government and private clients, HSW Engineering, Inc. provides essential services that are needed to keep many of the critical environmental remediation, water resource, and infrastructure systems in our communities operating. As such, we continue to provide full services to our clients as conditions allow.

We continue to prioritize the safety and health of our team members. We've updated our internal Comprehensive Health & Safety Plan and office procedures to include measures to help reduce the impact of COVID-19 outbreak conditions on businesses, workers, clients, and the public. Our employees that work in the field have been instructed on precautions they must take to protect both themselves and those that they encounter. Our team has also been provided with documentation regarding their essential duties, so that work may continue in areas where "stay at home" or "safer at home" orders have been issued.

HSW remains committed to meeting project deadlines, maintaining compliance, and avoiding any unnecessary delays. As a firm, we've invested in technology and are experienced using various remote meeting and collaboration tools. Our staff is communicating internally amongst their teams, and externally with clients, stakeholders, and agencies.

Please continue to be vigilant to keep yourselves and those around you safe and let us know how we can be of assistance during these difficult and evolving times.

Take Care,

HSW ENGINEERING, INC.
