

Iron L

F002873

- Economical source of complexed iron
- Suitable for soil or foliar application
- Better compatibility with other products, than straight iron sulfate

GUARANTEED ANALYSIS:

Iron (Fe).....5%
 Derived From: Ferrous Sulfate

PRODUCT DESCRIPTION:

Iron L is a complexed lignosulfonate magnesium product which can be used on any crop where added soluble Iron is needed or where there is a Iron deficiency. Iron L can be used as a foliar or a soil applied nutrient.

It is each certified organic grower’s responsibility to get approval from his/her certifying agency before using this product. Because of differences among the various certifying agencies, and differences between NOP/EU/JAS/COR ingredient lists, Douglas Plant Health cannot guarantee that our products will be allowed by your certifier on your farm.

Synthetic Iron deficiency must be documented by soil or tissue testing or other documented and verifiable method as approved by the certifying agent.

| Crop Application Recommendations | |
|----------------------------------|---|
| Soil Applied | 1/4 gallon per acre - 10 gallons per acre |
| Foliar Spray | 8 ounces per acre - 1 gallon per acre |
