AMEC launches 2021 Critical Minerals Investment Opportunities Document

The Association of Mining and Exploration Companies (AMEC) has today launched the 2021 AMEC Critical Minerals Investment Opportunities document.

“The document is a visual showcase of Australia’s outstanding critical minerals projects to attract investment to our emerging critical minerals sector and is timely with today’s announcement of the Modern Manufacturing Initiative by the Prime Minister,” said AMEC Chief Executive Officer, Warren Pearce.

“Continuing the trend of the last few years, there is a growing investment interest for renewable sources of energy, particularly those offered by Australia’s vast critical minerals potential.”

“Today’s announcement by the Prime Minister for an investment of \$1.3 billion to downstream processing and manufacturing recognises the importance of developing Australia’s abundant critical minerals projects.”

“On the back of exponential growth in global demand for renewable batteries and other downstream critical minerals offerings, Governments are seeking to diversify and expand our local supply chains, starting with exploration and mining projects identified in this document.”

Designed to pique investor interest in the emerging market, AMEC’s document identifies 48 of Australia’s key critical minerals projects, from greenfield exploration to those nearing development, across a wide range of critical minerals.

“The opportunity for investment is ripe. AMEC’s previous iterations of the document have already attracted domestic and international interest to these projects located all around Australia. Along with our planned translation of the document into languages targeting key foreign investors, we expect today’s document launch to spur further investor interest,” said Mr Pearce.

AMEC encourages domestic and international investors and interested parties to contact companies directly to discuss opportunities. The document can be [viewed here](#).
