

## ***THE VALUE WE BRING TO SERVICE PROVIDERS & EQUIPMENT MANUFACTURERS***

LinRich Solutions works closely with pressure control and BOP equipment manufacturers and service companies to ensure that technical, operational and integration requirements are achieved. Our experience in oilfield manufacturing and equipment applications enables us to understand your revenue and cash flow challenges. We bring an end-user's perspective to your technical design teams to ensure effective and safe deep water well control equipment solutions. Our goal is to facilitate dialogue to ensure that end use customers are getting equipment that will provide the mechanical performance that they are counting on. We understand the issues and the operating environment. LinRich Solutions strives to provide equipment and service providers assurance that their end use customers get confirmation that their pressure control concerns are fully addressed cost effectively, and on-time, every time.

**CHALLENGE** – An Oilfield Service Provider wanted help developing an enhancement to one of their top revenue-generating subsea drilling products.

**SOLUTION** – We provided program management and technical oversight to include preparing the project Charter and the detailed Scope of Work in order to clearly define the Functional Specification for the new product. This approach greatly reduced risk and ensured that the key stakeholders were aligned with the project's objectives.

*"For your most challenging deepwater pressure control equipment challenges, put LinRich Solutions to the test"*
